Portfolio Analytics & Strategic Growth Audit

Prepared by: Principal Mobile Analytics & Growth Architect
Scope: Multi-App Comparative Analysis (`com.neuralsound.mss` & `com.neuralSound.audiocleaner`)
Reporting Period: Daily Snapshot (Latest 24 Hours ending 2026-08-21) + Multi-Horizon Historical Context

1. Portfolio Executive Summary & Health Dashboard

Portfolio Side-by-Side Health Overview

Metric	Music Separation iOS ( )	Vocal Cleaner ( )	Combined Portfolio Total / Avg
Yesterday Active Users (AU)	143	3	**146 AU**
Yesterday New Users (NU)	107 (74.8%)	0 (0.0%)	**107 NU (73.3%)**
Past 7D / 30D / Lifetime AU	419 / 841 / 1,056	11 / 27 / 27	**430 / 868 / 1,083**
Yesterday Sessions	169	17	**186 Sessions**
Engagement Rate (Yesterday)	84.6%	88.2%	**84.9% Weighted Avg**
Avg Session Duration	333.1s (~5.5 mins)	3,531.1s (~58.8 mins)	**625.3s Weighted Avg**
Crash-Free User Rate	**100.0%**	**66.67%** (■ Alert)	**99.3% Weighted Avg**
Primary Geo Footprint	South Korea (76.9%)	Bangladesh (100.0%)	South Korea (75.3%)
Primary Growth Driver	Paid/Viral Acquisition Spike	Organic High-Intent Power Users	Single-App Scaling (MSS)
Key Operational Risk	Telemetry Event Spam & Build 1.3.08 ER Drop	Micro-Scale, 33.3% Crash Rate & StoreKit Failures	Critical Build & Monetization Bugs

Cross-App Growth & Strategic Portfolio Trends

1. **Extreme Portfolio Asymmetry**: **Music Separation iOS** accounts for **97.9% of active daily users** and 98.4% of total lifetime users. **Vocal Cleaner** remains at an ultra-niche micro-scale (27 total lifetime users) with zero new user acquisition over the last 24 hours.
2. **Growth Surge vs. Monetization Bottleneck**: Music Separation iOS is undergoing a strong growth velocity curve (growing from 30 AU on Aug 15 to 143 AU on Aug 21, driven by a acquisition push in South Korea). Conversely, Vocal Cleaner exhibits zero acquisition velocity, but contains intense monetization activity (paywall loops and StoreKit retry events) concentrated among a single returning user.
3. **Telemetry & Production Quality Risks**:
4. **Music Separation iOS** suffers from extreme event flooding on UI slider interactions (`player_pitch_changed` firing 570.6 times/user), threatening GA4 data thresholds and cloud logging costs.
5. **Vocal Cleaner** suffers from severe stability degradation with a **66.67% Crash-Free Rate** (1 out of 3 users experienced an unhandled `app_exception`), accompanied by a 41.7% transaction failure rate (`purchase_failed` + `purchase_storekit_failed`).

2. Application Deep-Dive: Music Separation iOS

App Header & Health Score

- **App Name:** Music Separation iOS
- **Bundle ID:** `com.neuralsound.mss` | **GA4 Property ID:** `533563138` | **Stream ID:** `14402502632`
- **Health Score: 8.5 / 10**
- **Health Rationale:** Exceptional engagement rates (84.6%), robust onboarding conversion (>95%), and 100% crash-free stability on the primary build (1.3.07). The score is penalized due to severe unthrottled event telemetry (over 5,700 pitch events across 10 users) and an early engagement drop on the newly deployed 1.3.08 build (53.8% ER).

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon Window	Active Users (AU)	New Users (NU)	Total Sessions	Engagement Rate	Growth & Retention Trajectory Analysis
Yesterday (Latest 24h)	143	107	169	84.6%	**Peak Velocity**: 74.8% of daily users are newly acquired.
Past 7 Days	419	311	595	84.5%	**Acquisition Acceleration**: 74.2% of 7D users are new.
Past 30 Days	841	708	1,648	85.6%	**Scaling Phase**: 84.2% of monthly cohort acquired recently.
Past Year (365 Days)	1,056	933	2,487	84.8%	**Historical Baseline**: App scale is overwhelmingly recent.
All-Time / Lifetime	1,056	933	2,487	84.8%	**Total Footprint**: 88.4% lifetime user acquisition concentrated in 30d.

Scale & Trajectory Analysis

- **Growth Velocity:** High velocity trajectory. The app has expanded its active user base by **376.7% over the last 7 days** (rising from 30 AU on Aug 15 to 143 AU on Aug 21).
- **Acquisition Trajectory:** User acquisition is heavily front-loaded into recent days, with 708 out of 933 lifetime new users (75.9%) arriving within the last 30 days.
- **Lifetime Retention & User Decay:** Retention density is low relative to new acquisition; returning users represent only 25.2% of yesterday's active base (41 AU). While the app successfully attracts new installs, long-term retention loops require strengthening.

Old vs. New User Cohort Deep-Dive

Cohort Segment	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views	Key Cohort Behavior

New Users	114	112	347.8s (~5.8 min)	**94.6%**	229	Exceptional initial activation; high onboarding completion.
Returning Users	41	52	332.9s (~5.5 min)	**69.2%**	39	Lower engagement rate (-25.4% vs New); reduced screen browsing.
(not set) / Ghost	0	5	6.5s	20.0%	1	Transient background execution / push notification ping.

Cohort Dynamics

- New users demonstrate a high engagement rate (**94.6%**), driven by an optimized onboarding experience (`first_journey_login_completed` = 106 users out of 109 `first_open`).
- Returning users exhibit a noticeable drop in Engagement Rate (**69.2%**), suggesting that utility wear-off or lack of feature re-engagement loops occurs once initial audio stems are processed.

7-Day Velocity & Trajectory

Date	Active Users (AU)	New Users (NU)	Total Sessions	Engagement Rate	Daily Commentary
2026-08-15	30	4	46	82.6%	Baseline activity; organic usage.
2026-08-16	28	7	38	84.2%	Steady state retention.
2026-08-17	36	14	45	80.0%	Initial user acquisition uptick (+100% NU).
2026-08-18	57	36	71	83.1%	Expansion phase begins (+157% NU).
2026-08-19	94	78	120	**90.8%**	**Primary Acquisition Spike** (South Korea campaign/viral node).
2026-08-20	93	65	113	82.3%	Sustained high volume plateau.
2026-08-21	**143**	**107**	**169**	84.6%	**All-Time Peak Volume** (+376% AU vs. Aug 15).

User Funnel Diagrams

Onboarding & Activation Funnel

```
[109 Unique Users] first_open ■ ▼ (100% Conversion / 111 Users Viewed) [111 Unique Users] onboarding_viewed / onboarding_step_viewed (449 events) ■ ▼ (99.1% Step Conversion) [110 Unique Users] onboarding_next_tapped ■ ▼ (100% Transition) [117 Unique Users] login_screen_viewed ■ ▼ (94.0% Login Success Rate) [110 Unique Users] login_succeeded ■ ▼ (96.4% First Journey Completion Rate) [106 Unique Users] first_journey_login_completed ■■■ [OVERALL ONBOARDING CONVERSION: 97.2%]
```

Core Feature Execution Funnel (Audio Import to Stem Playback)

```
[105 Unique Users] plus_button_tap / plus_separation_tapped (101 Users) ■ ▼ (88.6% Target Intent) [93 Unique Users] first_journey_add_separation_clicked ■ ▼ (83.8% File Selection Intent) [78 Users - Files] import_files_app_tap ■■■ OR ■■■ [63 Users - Photos] import_photos_tap ■ ■■■
```

`player_tempo_changed`	**2,046**	9	**227.3**	■ **HIGH BUG**: Continuous slider missing debouncing.
`audio_sessions`	1,265	75	17.3	Normal high-frequency audio engine heartbeat.
`user_engagement`	1,020	143	7.1	Expected GA4 core telemetry.
`separation_play_started`	571	47	12.4	Normal playback iteration.
`player_stem_balance_changed`	132	1	**132.0**	■■ **MEDIUM BUG**: Single user balance slider spam.
`player_stem_muted`	209	5	41.8	High stem toggle activity (normal usage).

Diagnostic Findings:

1. **Pitch & Tempo Slider Flooding**: `player_pitch_changed` (570.6 events/user) and `player_tempo_changed` (227.3 events/user) fire raw events on every pixel touch shift of the UI slider. **Immediate fix required**: Apply a **300ms–500ms trailing-edge debouncer** or trigger telemetry only on `onTouchUp` / slider release.
2. **Audio Engine Heartbeat Efficiency**: `audio_sessions` fires 17.3 times per user; verify session batching to avoid exceeding GA4 daily event limits.

Geographic Distribution

Country / Territory	Active Users	Total Sessions	Session Density (Sess/User)	Market Share %
South Korea	**110**	**126**	1.15	**76.9%**
Iran	7	9	1.29	4.9%
Bangladesh	5	13	2.60	3.5%
India	4	2	0.50	2.8%
Japan	3	3	1.00	2.1%
United States	3	2	0.67	2.1%
Canada	2	3	1.50	1.4%
France	2	3	1.50	1.4%
Other (Oman, PH)	2	2	1.00	1.4%

Prioritized Strategic Action Matrix (Music Separation iOS)

Priority	Track	Focus Area	Detailed Action Plan	Owner
P0	**Engineering**	**Pause 1.3.08 Rollout**	Freeze App Store release of 1.3.08. Investigate cause of ER collapse (53.8% vs 86.8%). Check for audio engine thread locks.	Lead iOS Engineer

P0	**Analytics**	**Fix Telemetry Spam**	Implement trailing-edge debouncing on `player_pitch_changed` and `player_tempo_changed` UI controls.	Mobile Analytics Lead
P1	**Product**	**Import Drop-off Fix**	Redesign file/photo import confirmation UI to eliminate the 43.1% conversion drop-off between selection and processing.	Core Product Designer
P1	**Growth**	**South Korea UA Capture**	Capitalize on Korean growth surge (76.9% AU); localize store metadata, keywords, and onboarding into Korean.	Growth Marketing Manager
P2	**Growth**	**Retention Loops**	Deploy local push notifications and background stem completion alerts to boost returning user engagement (currently 69.2%).	Lifecycle Specialist

3. Application Deep-Dive: Vocal Cleaner

App Header & Health Score

- **App Name:** Vocal Cleaner
- **Bundle ID:** `com.neuralSound.audiocleaner` | **GA4 Property ID:** `533563138` | **Stream ID:** `15407667671`
- **Health Score: 4.5 / 10**
- **Health Rationale:** Extremely low active scale (3 AU yesterday; 27 lifetime users), critical stability issues (**66.67% Crash-Free User Rate**), feature blockage (`vc_record_denoise_blocked`), and heavy paywall purchase friction with recurring StoreKit errors (`purchase_storekit_failed`). Retains points due to high engagement duration among power users (3,531 seconds/session).

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon Window	Active Users (AU)	New Users (NU)	Total Sessions	Engagement Rate	Growth & Retention Trajectory Analysis
Yesterday (Latest 24h)	3	0	17	88.2%	**Zero Acquisition**: Baseline active core returning power users.
Past 7 Days	11	7	65	73.8%	**Low Scale**: Micro-cohort operating with limited reach.
Past 30 Days	27	27	94	69.1%	**Static Footprint**: Lifetime audience bounded at 27 users.

Past Year (365 Days)	27	27	94	69.1%	Entire app historical lifetime footprint is 27 total users.
All-Time / Lifetime	27	27	94	69.1%	**Flat Scale**: Acquisition channel is currently inactive/dormant.

Scale & Trajectory Analysis

- **Growth Velocity:** Stagnant. No new user acquisition in the last 24 hours, and only 7 new users acquired across the last 7 days.
- **Acquisition Trajectory:** Historical acquisition peaked during a brief test window within the last 30 days and has collapsed to zero organic inbound volume.
- **Lifetime Retention & Power Usage:** Returning users display an extreme average session duration of **3,531.1 seconds (~58.8 minutes)** across 5.67 sessions per user/day. This signifies a tiny, highly dedicated utility power-user cohort (e.g., audio recording/denoising studio session).

Old vs. New User Cohort Deep-Dive

Cohort Segment	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views	Key Cohort Behavior
New Users	0	0	0.0s	N/A	0	No new activation in reporting window.
Returning Users	3	17	3,531.1s (~58.8 min)	**88.2%**	101	Continuous audio studio work; heavy monetization attempt loops.
(not set)	0	0	0.0s	N/A	0	N/A

7-Day Velocity & Trajectory

Date	Active Users (AU)	New Users (NU)	Total Sessions	Engagement Rate	Daily Commentary
2026-08-15	3	0	11	63.6%	Low scale power usage baseline.
2026-08-16	2	0	9	66.7%	Regular returning session frequency.
2026-08-17	1	0	3	100.0%	Single power user engaged.
2026-08-18	2	1	7	85.7%	1 new user acquired.
2026-08-19	**8**	**6**	**17**	58.8%	Small UA spike (6 new users); lower engagement.
2026-08-20	1	0	3	66.7%	Scale drops back to baseline.

2026-08-21	3	0	**17**	**88.2%**	High density daily active usage (5.67 sess/user).

User Funnel Diagrams

Monetization & Purchase Execution Funnel (Single User Purchase Attempt Analysis)

```
[1 Unique User] paywall_viewed (16 Total Views) ■ ▼ (100% User Intent / 12 Plan Selection Events) [1 Unique User] paywall_plan_selected (2) / subscribe_tapped (12) / purchase_started (12) ■ ■■■
```

`screen_view`	101	2	50.5	High screen navigation depth per user.
`app_store_subscription_renew`	35	2	17.5	Active recurring subscription telemetry.
`paywall_viewed`	16	1	**16.0**	■■ Paywall loop: User opened paywall 16 times in 1 day.
`subscribe_tapped`	12	1	**12.0**	High purchase intent retried 12 times due to errors.
`purchase_started`	12	1	12.0	Transaction attempt initiated 12 times.
`purchase_approved`	10	1	10.0	StoreKit approved purchase 10 times.
`purchase_succeeded` / `purchase`	6 / 6	1	6.0	6 confirmed purchase events.
`purchase_failed`	**5**	1	**5.0**	■ **IAP Bug**: 5 transaction failures logged.
`purchase_storekit_failed`	**2**	1	**2.0**	■ **StoreKit Bug**: StoreKit framework errors.
`vc_record_denoise_blocked`	**2**	1	**2.0**	■■ User blocked from denoising due to paywall wall.
`app_exception`	**1**	1	**1.0**	■ Unhandled fatal application crash.

Geographic Distribution

Country / Territory	Active Users	Total Sessions	Session Density (Sess/User)	Market Share %
Bangladesh	**3**	**17**	**5.67**	**100.0%**

Prioritized Strategic Action Matrix (Vocal Cleaner)

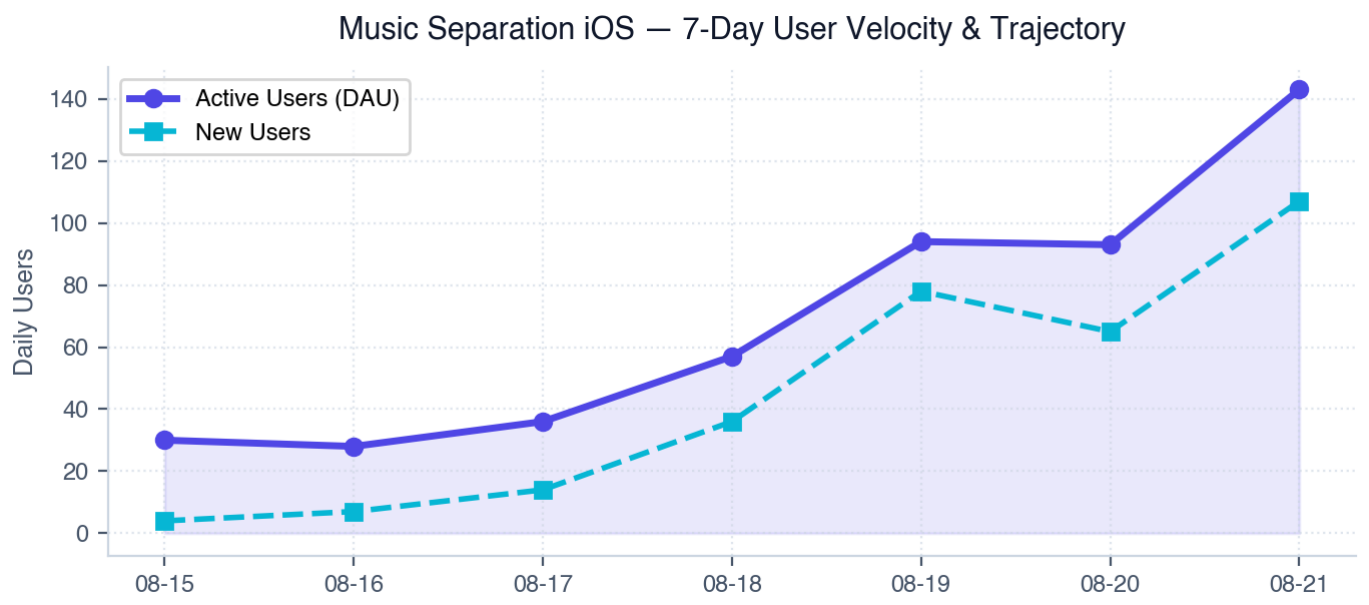

Priority	Track	Focus Area	Detailed Action Plan	Owner
P0	**Engineering**	**Fix App Crash & StoreKit**	Debug `app_exception` crash logs and resolve StoreKit transaction failure loops (`purchase_storekit_failed`). Deploy v1.0.02 patch.	Lead iOS Engineer

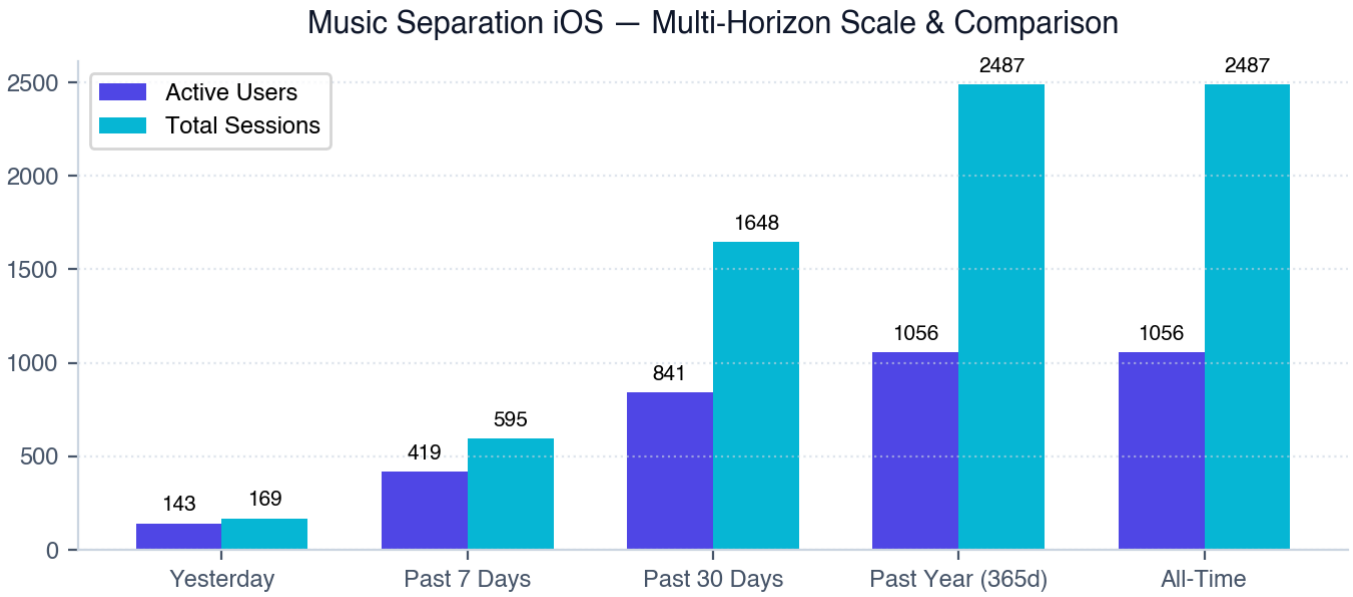

P0	**Product**	**IAP Retry Flow Optimization**	Fix payment state machine to prevent users from repeating purchase attempts 12 times due to unhandledStoreKit state hangs.	Monetization PM
P1	**Growth**	**User Acquisition Engine**	Initiate basic ASA (Apple Search Ads) campaigns targeting "voice denoiser" keywords to scale baseline beyond 3 AU/day.	Growth Marketing Lead
P1	**Product**	**Denoise Barrier UX**	Revamp `vc_record_denoise_blocked` paywall prompt to present clear trial options rather than hard feature blocks.	Product Designer
P2	**Analytics**	**Telemetry Stream Audit**	Consolidate duplicate purchase events (`purchase` vs. `purchase_succeeded`) to standardize revenue tracking.	Analytics Engineer
