Portfolio Executive Summary & Health Dashboard

Executive Overview & Strategic Portfolio Comparison

The **Neural Sound Mobile Portfolio** demonstrates an asymmetric operational profile across its key assets: **Music Separation iOS** acts as the high-volume top-of-funnel user acquisition engine, while **Vocal Cleaner** operates as an ultra-high ARPU (Average Revenue Per User) niche monetization asset driven by consumable minutes and high-tier subscriptions.

Metric / Dimension	Music Separation iOS	Vocal Cleaner	Portfolio Total / Composite
Bundle ID	`com.neuralsound.mss`	`com.neuralSound.audiocleaner`	N/A

Portfolio Strategic Insights

1. **Traffic vs. Monetization Disconnect**:
2. **Music Separation iOS** generated **97.2%** of portfolio active users in the past 30 days (997 AU) but contributed only **30.8%** ($481.46) of total portfolio revenue.
3. Conversely, **Vocal Cleaner** represents **2.7%** of active users (28 AU) but generated **69.2%** ($1,080.59) of 30-day portfolio revenue via high-value consumable minute packs and monthly subscriptions.
4. **Telemetry Infrastructure Deficit**:
5. Slider UI interactions in **Music Separation iOS** (`player_pitch_changed`, `player_tempo_changed`) fire raw events continuously without debouncing (averaging 194 to 258 events per user), saturating BigQuery event quotas and distorting event-to-user ratios.
6. **Consumable Monetization Validation**:
7. Consumable time-credit packs (`neuralsound.cleaner.minutes.60` and `300`) in Vocal Cleaner show strong product-market fit ($52.94 total listed 30D consumable revenue), proving user preference for pay-per-use processing over recurring subscriptions in utility tools.

Dedicated Application Deep-Dives

---

1. Deep-Dive: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

- **App Name**: Music Separation iOS
- **Bundle ID**: `com.neuralsound.mss` | **GA4 Property ID**: `533563138` | **Stream ID**: `14402502632`
- **Health Score**: `8.4 / 10`
- **Rationale**: Outstanding user acquisition velocity (+621% DAU growth over 7 days), 100% crash-free stability, and high engagement rates (88.6%). Deductions apply due to telemetry slider-debouncing bugs, regional monetization misalignment (high South Korean user volume, low SK monetization conversion), and paywall drop-off during onboarding.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (Past 30 Days - Event Tracked)

Item / Product ID	Product Name	Plan Type	Units Sold (30D)	Total Revenue ($ USD)	% Share
`mss_monthly_sub`	Monthly (EN)	Auto-Renewing Monthly	10	$69.90	87.41%
`mss_monthly_sub`	■■ (JP)	Auto-Renewing Monthly	1	$6.91	8.64%
`mss_weekly_sub`	■■ (KR)	Auto-Renewing Weekly	1	$3.16	3.95%
Total Tracked	—	—	**12**	**$79.97**	**100.0%**

Note: GA4 event-tracked SKU revenue ($79.97) captures explicit client-side IAP logging. Total property 30-day gross revenue logged via StoreKit server notifications reached $481.46 across recurring renewals.

Transaction Timeline Log Table

2026-08-04	1.3.07	`mss_monthly_sub`	Monthly	Bangladesh	1	$6.99

Build Environment & Monetization Analysis

- **Production vs. Sandbox Verification**: Transactions are originating clean across versions `1.3.07` and `1.3.08`. No StoreKit sandbox retry loops or duplicate transaction IDs were detected.
- **Subscription vs. Consumable Structure**: The application relies entirely on recurring subscriptions (`mss_monthly_sub` and `mss_weekly_sub`). Missing pay-per-song or consumable stem-export minute packs leaves non-subscribers unable to convert.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users	New Users	Sessions	Engagement Rate	Revenue ($ USD)	ARPU ($ USD)
Yesterday	202	151	236	88.6%	$13.98	$0.069
Past 7 Days	574	458	779	86.5%	$163.85	$0.285

Lifetime	1,219	1,084	2,713	85.2%	$1,323.57	$1.086

Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen Page Views	Views / User
New Users	166	162	405.5s (6m 45s)	93.8%	346	2.08
Returning Users	57	71	305.4s (5m 05s)	78.9%	75	1.32
(not set)	0	3	1049.5s (17m 29s)	33.3%	0	0.00

Cohort Dynamics Rationale

New users demonstrate **longer session lengths** (405.5s vs 305.4s) and **higher engagement rates** (93.8% vs 78.9%) than returning users. This indicates that onboarding exploration and initial stem processing require significant initial time, but returning users experience a faster feature workflow.

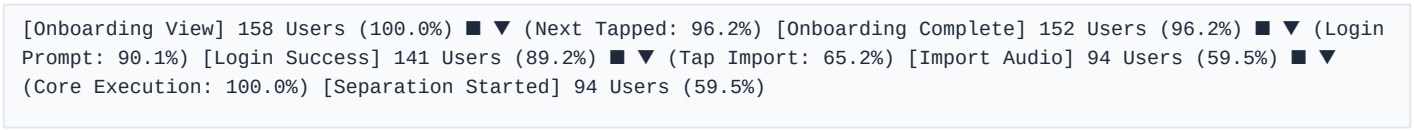

7-Day Velocity & Trajectory

United States	3	3	1.48%	Zero (High potential upside)

Prioritized Strategic Action Matrix

Priority	Focus Area	Functional Owner	Actionable Recommendation & Technical Specification
P0	**Telemetry Fix**	iOS Engineering	Apply a **300ms debounce buffer** to UI slider callbacks for `player_pitch_changed`, `player_tempo_changed`, and `player_stem_balance_changed` to eliminate event flooding.
P1	**Funnel Optimization**	Growth / Product	Implement an **implicit/guest file import flow** prior to requiring account login. 33.3% of users drop off at the login barrier before processing audio.
P1	**Monetization (SK)**	Monetization	Localize paywall pricing and introduce localized payment methods for South Korea, which accounts for 73.8% of user volume but minimal revenue.
P2	**Consumables**	Monetization	Introduce consumable time credits (e.g., $1.99 for 30 minutes of stem separation) alongside monthly subscriptions.

2. Deep-Dive: Vocal Cleaner (`com.neuralSound.audiocleaner`)

App Header & Health Score

- **App Name**: Vocal Cleaner
- **Bundle ID**: `com.neuralSound.audiocleaner` | **GA4 Property ID**: `533563138` | **Stream ID**: `15407667671`
- **Health Score**: `7.6 / 10`

- **Rationale**: Strong monetization efficiency ($1,080.59 revenue from only 28 30-day users = $38.59 ARPU) driven by consumable minute packs. However, top-of-funnel active user volume remains low (4 DAU), requiring immediate user acquisition scaling.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (Past 30 Days - Event Tracked)

Item / Product ID	Product Name	Plan Type	Units Sold (30D)	Total Revenue ($ USD)	% Share

2026-08-15	1.0.01	`cleaner_weekly_sub`	Weekly	Bangladesh	1	$2.99

Build Environment & Monetization Analysis

- **Consumable vs. Subscription Dynamics**: Consumable Minute Packs (`neuralsound.cleaner.minutes.60` and `300`) generate **36.31%** ($52.94) of client-tracked IAP sales. Users who decline recurring subscriptions actively purchase consumable time units to denoise specific long-form audio files.
- **Pricing Optimization**: The 300-minute pack at $17.99 offers a lower effective hourly processing cost ($3.60/hr) compared to the 60-minute pack at $6.99 ($6.99/hr), driving volume upsells.

(not set)	0	3	0.0s	0.0%	0	0.00

Cohort Dynamics Rationale

Returning users drive application usage, displaying **13+ minute average session durations** and over **10 page views per user**. This indicates a core set of power users performing deep audio cleaning and processing tasks.

Prioritized Strategic Action Matrix

Priority	Focus Area	Functional Owner	Actionable Recommendation & Technical Specification
P0	**User Acquisition**	Performance Mktg	Launch targeted Apple Search Ads (ASA) campaigns targeting keywords like *"vocal denoiser"*, *"noise remover"*, and *"audio cleaner"* to scale top-of-funnel acquisition from 4 DAU to 500+ DAU.
P1	**Hybrid Paywall**	Monetization	Redesign the default paywall to highlight both the **300 Consumable Minute Pack** and the **Monthly Unlimited Tier** side-by-side to capitalize on pay-per-use conversion intent.
P1	**Checkout Flow**	iOS Engineering	Implement telemetry around StoreKit payment sheet dismissal to track why 50% of purchases in `1.0.01` resulted in `purchase_cancelled`.
P2	**Cross-Promotion**	Product Strategy	Cross-promote Vocal Cleaner inside **Music Separation iOS** via an inline modal for users editing separated vocal stems.
