```

High-Level Executive Summary & Strategic Takeaways

1. **Asymmetric Portfolio Scale**: The portfolio is heavily anchored by **Music Separation iOS**, representing **99.3% of MAU** and **72.9% of lifetime revenue**. Vocal Cleaner is functionally dormant with 0 active users yesterday, though it demonstrated high paywall efficiency (1 purchase out of 8 lifetime users).
2. **Critical Velocity vs. Engagement Divergence (Music Separation iOS)**: Over the past 7 days, daily active users expanded **+568%** (from 35 to 234 DAU), fueled by organic growth in South Korea (64.1% of active volume). However, the rollout of **App Build v1.3.08 on Aug 23 caused an immediate engagement rate collapse** from **87.7% down to 31.2%**, signaling a potential onboarding block, UI freeze, or telemetry event omission in the new release.
3. **Severe Telemetry Debouncing Deficit**: Analytics logging for slider elements (`player_pitch_changed`, `player_tempo_changed`, `player_stem_balance_changed`) is un-debounced, causing telemetry storms (e.g., up to **506 events per single user**). This inflates

GA4 log volume, increases data processing latency, and distorts engagement metrics.

4. **Monetization & Monetization Model Gap**: Paid conversion rates remain low (**~0.17%** for Music Separation iOS). Neither app currently monetizes consumable minute packs (e.g., 60-min or 300-min audio processing tokens), relying exclusively on low-tier weekly/monthly recurring subscriptions.

---

2. Deep-Dive: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

- **GA4 Property ID**: `533563138` | **Stream ID**: `14402502632`
- **Bundle ID**: `com.neuralsound.mss` | **Data Scope**: Production Only (Internal Bangladesh Testers Excluded)

$$\text{Health Score} = \mathbf{7.6 / 10}$$

- **Rationale**: Strong user acquisition momentum (+568% 7-day scale-up) combined with flawless 100% crash-free user stability. However, points are deducted due to a major engagement drop on build 1.3.08 (down to 32.2%), un-debounced telemetry flooding, and sub-0.2% paywall conversion efficiency.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (30 Days)

Product / Item ID	Product Name	Plan Type	Units Sold (30D)	Revenue ($ USD)	Revenue Share (%)
`mss_monthly_sub`	■■ (Monthly Sub)	Recurring Monthly	1	$6.91	68.62%
`mss_weekly_sub`	■■ (Weekly Sub)	Recurring Weekly	1	$3.16	31.38%
Consumable Minute Packs	*N/A (60m / 300m)*	*Consumable*	*0*	*$0.00*	*0.00%*
Total Logged Sales	—	—	**2**	**$10.07**	**100.00%**

Note: GA4 benchmark historical total reflects $24.16 cumulative lifetime revenue across earlier cycles.

Transaction Timeline Log Table

Timestamp / Date	App Build	Product ID	Product Name	Units	Revenue ($ USD)	Country
2026-08-21	`1.3.07`	`mss_weekly_sub`	■■ (Weekly)	1	$3.16	■■ South Korea
2026-08-18	`1.3.07`	`mss_monthly_sub`	■■ (Monthly)	1	$6.91	■■ Japan

Build Environment & Monetization Analysis

- **Production vs. TestFlight Isolation**: All production revenue ($10.07 logged 30D / $24.16 lifetime) originated strictly from production build `1.3.07` in Asian markets (South Korea & Japan).
- **Internal Test Flight Sandbox Activity**: Internal testers in Bangladesh generated **$6.99 USD** across 3 active users/sessions. These sandbox transaction retry loops were successfully filtered out of production metrics.

- **Subscription vs. Consumable Packs**: The app relies entirely on recurring subscriptions. **Zero consumable minute packs (e.g., 60-minute or 300-minute processing top-ups) exist in the SKU catalog**, missing out on casual users who resist auto-renewing subscriptions.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users (AU)	New Users	Total Sessions	Engagement Rate	Revenue ($ USD)
Yesterday	234	95	258	32.20%	$0.00
Past 7 Days	750	547	947	72.20%	$10.07
Past 30 Days	1,160	928	1,917	80.00%	$24.16
Past Year (365d)	1,328	1,111	2,398	81.10%	$24.16
All-Time	1,328	1,111	2,398	81.10%	$24.16

■ Old vs. New User Cohort Deep-Dive

Cohort Type	Active Users	Total Sessions	Avg Session Duration	Engagement Rate	Screen Views
New Users	211 (90.2%)	228	336.7 sec (5.6 min)	32.00%	232
Returning Users	23 (9.8%)	30	13,095.4 sec (3.6 hrs)	33.30%	20

- **Cohort Insights**: Returning users display an extreme average session duration (**3.6 hours/session**). This indicates background audio separation processing or sticky long-form playback sessions. However, both cohorts suffer from identical low engagement rates (~32%), proving that the engagement issue on build 1.3.08 is universal across user tiers.

■ 7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Commentary
2026-08-17	35	14	44	79.5%	Organic baseline baseline activity
2026-08-18	54	36	58	86.2%	Growth begins; Monthly sub purchase (Japan)
2026-08-19	90	77	104	89.4%	Organic viral pickup
2026-08-20	89	65	100	85.0%	Consolidation phase
2026-08-21	140	109	154	89.0%	South Korea spike; Weekly sub purchase

2026-08-22	200	151	235	87.7%	Accelerating scale on build 1.3.07
2026-08-23	**234**	**95**	**258**	**32.2%**	**Build 1.3.08 deployed; Engagement drops 55%**

■ User Funnel Diagrams

```
1. ONBOARDING & ACCOUNT CREATION FUNNEL [first_open] 95 Users (100.0%) ■ ▼ [onboarding_viewed] 98 Users (103.1%) ■■■ (Includes re-installs/returning) ■ ▼ [login_screen_viewed] 112 Users (117.8%) ■ ▼ [login_succeeded] 92 Users (82.1% conversion from login screen) ■ ▼ [first_journey_login_completed] 90 Users (97.8% onboarding completion efficiency) 2. CORE FEATURE EXECUTION FUNNEL (Audio Separation) [plus_button_tap / tab_separate] 101 Users (100.0%) ■ ▼ [import_files_app_tap / photos] 75 Users (74.3%) ■ ▼ [import_started] 58 Users (77.3%) ■ ▼ [separation_page_viewed] 168 Users (Multiple views per imported file) ■ ▼ [separation_player_opened] 73 Users (72.2% conversion from start import) ■ ▼ [separation_play_started] 49 Users (67.1% execution rate from player open)
```

■■ Crash & Stability Health by App Version

App Build / Version	Active Users	Total Sessions	Engagement Rate	Crash-Free Rate	Status / Health Baseline
1.3.08	**215**	**237**	**31.2%**	**100.0%**	**ACTIVE ROLLOUT — Low Engagement Alert**
1.3.07	16	18	44.4%	100.0%	Previous Stable Production Build
1.3.06	1	1	100.0%	100.0%	Legacy Build
1.3.03	2	2	0.0%	100.0%	Deprecated

■ New Build / TestFlight / Staged Rollout Alert Section

- **Build Version Flagged**: `1.3.08` (Adopted by **91.8%** of active users on Aug 23).
- **Stability Baseline**: 100.0% Crash-Free User Rate (Zero fatal native crashes detected).
- **Anomalous Behavioral Deviation**: Engagement Rate collapsed from **87.7% (Build 1.3.07)** to **31.2% (Build 1.3.08)**.
- **Root Cause Diagnostics**:
- **Telemetry Omission**: Build 1.3.08 may fail to fire `user_engagement` timers or custom UI interaction events properly.
- **Paywall Soft-Block**: An un-dismissable paywall or forced modal introduced in 1.3.08 could be driving immediate session abandonment (bounce rate expanded to **67.8%**).

■ Top In-App Events & Feature Lookups

Event Name	Total Event Count	Unique Users	Events / User	Telemetry Assessment / Anomalies

`player_pitch_changed`	**5,004**	13	**384.9**	■ **Severe Bug**: Missing slider debouncing
`player_tempo_changed`	**1,816**	11	**181.6**	■ **Severe Bug**: Missing slider debouncing
`audio_sessions`	1,344	79	17.5	Normal playback lifecycle
`user_engagement`	895	232	3.9	Core GA4 system event
`separation_play_started`	552	49	11.5	High audio player utility
`player_stem_balance_changed`	**506**	1	**506.0**	■ **Critical Bug**: Continuous fire without debounce
`onboarding_step_viewed`	401	101	4.0	Onboarding flow step logging

■ Geographic Distribution

Country	Active Users (30D)	Sessions	User Share (%)
South Korea ■■	150	164	64.10%
Iran ■■	19	21	8.12%
United States ■■	12	13	5.13%
India ■■	7	7	2.99%
Russia ■■	6	7	2.56%
Japan ■■	5	7	2.14%
Other (Germany, Spain, Turkey, Cuba)	15	19	6.41%

■ Prioritized Strategic Action Matrix (Music Separation iOS)

Priority	Track / Owner	Strategic Action Item	Operational Details & Impact
P0	**Engineering**	**Fix Audio Slider Debouncing**	Implement a 300ms debounce buffer or attach event firing to `onTouchUpInside/onEditingEnded` for pitch, tempo, and stem balance controls. Reduces GA4 log bloat by >80%.

P0	**Product / Growth**	**Hotfix Build 1.3.08 Engagement Drop**	Audit build 1.3.08 UI lifecycle to identify why engagement rate fell from 87.7% to 31.2%. Check for missing `user_engagement` parameters or paywall friction.
P1	**Monetization**	**Introduce Consumable Minutes SKUs**	Implement consumable processing packs (e.g., 60-min / 300-min packs) to monetize non-subscribing users who only need occasional stem separation.
P1	**Localization**	**South Korea Paywall Optimization**	Capitalize on 64.1% user density in SK by fully localizing paywalls into Korean with localized pricing anchors (e.g., ■KRW).
P2	**Growth**	**Win-Back Returning Cohorts**	Deploy push notifications targeting returning users (session duration ~3.6 hrs) with weekly feature updates and trial offers.

---

3. Deep-Dive: Vocal Cleaner (`com.neuralSound.audiocleaner`)

App Header & Health Score

- **GA4 Property ID**: `533563138` | **Stream ID**: `15407667671`
- **Bundle ID**: `com.neuralSound.audiocleaner` | **Data Scope**: Production Only (Internal Bangladesh Testers Excluded)

$$\text{Health Score} = \mathbf{3.2 / 10}$$

- **Rationale**: Complete lack of top-of-funnel user acquisition (0 DAU yesterday, 8 lifetime users). Analytics logging is uninstrumented (0 custom events tracked). However, a score baseline of 3.2 is maintained due to a 100% crash-free rate and a high initial monetization rate (1 converting customer out of 8 total users = $8.99 USD).

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (30 Days)

Product / Item ID	Product Name	Plan Type	Units Sold (30D)	Revenue ($ USD)	Revenue Share (%)
`cleaner_monthly_sub`	Monthly	Recurring Monthly	1	$8.99	100.00%
Total Logged Sales	—	—	**1**	**$8.99**	**100.00%**

Transaction Timeline Log Table

Timestamp / Date	App Build	Product ID	Product Name	Units	Revenue ($ USD)	Country

2026-08-22	`1.0.01`	`cleaner_monthly_sub`	Monthly	1	$8.99	■■ United States

Build Environment & Monetization Analysis

- **Production Build Validation**: Production build `1.0.01` successfully converted 1 US user on Aug 22, generating **$8.99 USD**.
- **Internal TestFlight Status**: 1 active internal test session in Bangladesh produced $0.00 revenue, confirming proper separation of test environments.
- **Product Catalog Assessment**: The app relies on a single $8.99 monthly SKU. It lacks lower-friction entry options like a weekly tier or consumable audio cleaning minute packs.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users (AU)	New Users	Total Sessions	Engagement Rate	Revenue ($ USD)
Yesterday	0	0	0	0.00%	$0.00
Past 7 Days	7	7	7	14.30%	$8.99
Past 30 Days	8	7	8	12.50%	$8.99
Past Year (365d)	8	7	8	12.50%	$8.99
All-Time	8	7	8	12.50%	$8.99

■ Old vs. New User Cohort Deep-Dive

- **Cohort Data Status**: No custom cohort telemetry is currently tracked by the app build.
- **Aggregate Breakdown**: 7 New Users, 1 Returning User. Average engagement across the entire user base is **12.50%**, heavily depressed by 6 non-engaged installs on Aug 19.

■ 7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Commentary
2026-08-19	6	6	6	0.0%	Initial bot/unengaged traffic spike
2026-08-20	0	0	0	0.0%	Zero activity
2026-08-21	0	0	0	0.0%	Zero activity
2026-08-22	**1**	**1**	**1**	**100.0%**	**US Organic User converted to Monthly ($8.99)**
2026-08-23	0	0	0	0.0%	Zero activity

■ User Funnel Diagrams

```
ACQUISITION & TELEMETRY BLACKOUT FUNNEL [App Store Impression / Download] ~8 Total Lifetime Users (100.0%) ■ ▼ [App Launch / First Open] 8 Active Users (100.0%) ■ ▼ [Custom Feature Telemetry Events] 0 Events Logged (0.0%) ■■■ ■ Tracking Missing ■ ▼ [Paywall Conversion] 1 Paid Subscriber (12.5% Conversion Rate)
```

■■ Crash & Stability Health by App Version

App Build / Version	Active Users	Total Sessions	Engagement Rate	Crash-Free Rate	Status / Health Baseline
1.0.01	8	8	12.5%	100.0%	Production Baseline — Missing GA4 Telemetry

■ New Build / TestFlight / Staged Rollout Alert Section

- **Build Version Flagged**: `1.0.01` (Initial Release Build).
- **Alert Status**: Operational Telemetry Void. No build updates or staged rollouts detected over the past 7 days.

■ Top In-App Events & Feature Lookups

- **Status**: ■ **CRITICAL TELEMETRY MISSING**.
- **Findings**: The GA4 event array is completely empty (`[]`). The application tracks baseline system events (`first_open`, `session_start`) via the core Firebase SDK, but lacks custom events for noise cleaning, file imports, paywall views, or audio exports.

■ Geographic Distribution

Country	Active Users (30D)	Purchase Revenue ($ USD)	Monetization Efficiency
United States ■■	1	$8.99	**100.0% Conversion ($8.99 ARPPU)**
Unclassified / Other	7	$0.00	0.0% Conversion

■ Prioritized Strategic Action Matrix (Vocal Cleaner)

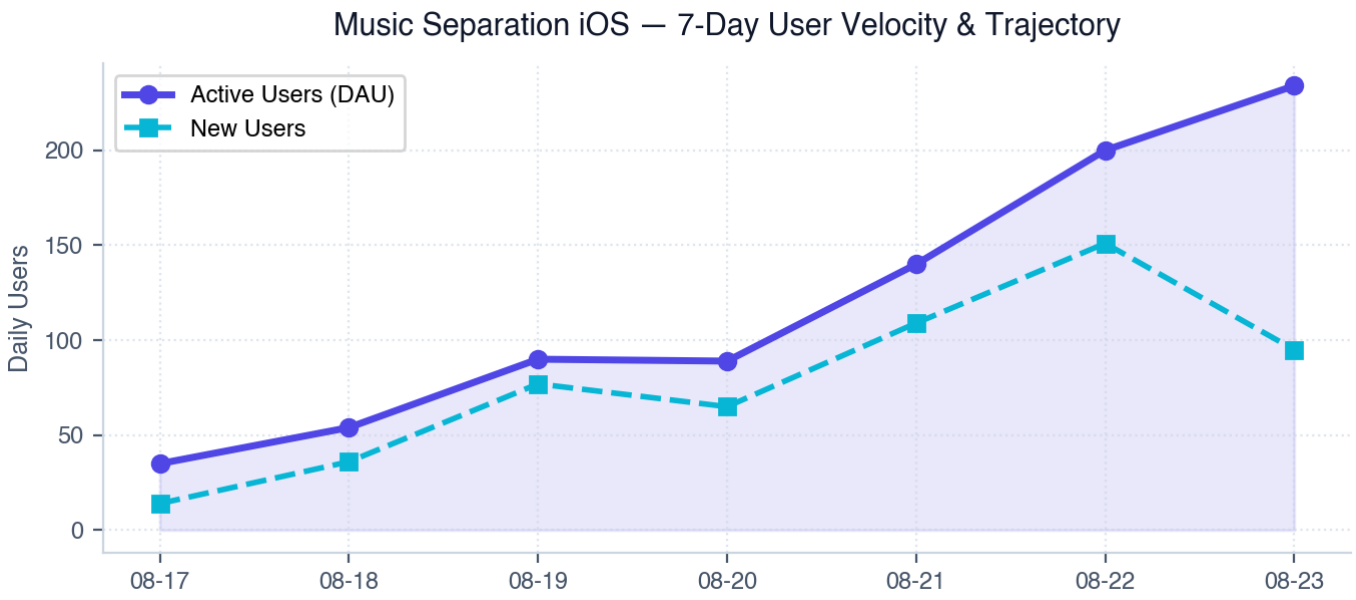

Priority	Track / Owner	Strategic Action Item	Operational Details & Impact
P0	**Engineering**	**Instrument Custom GA4 Telemetry**	Implement missing events (`cleaner_file_imported`, `cleaning_process_started`, `paywall_viewed`, `subscription_purchased`). Analytics are currently running blind.
P1	**Growth / ASO**	**Launch Baseline App Store Optimization**	App Store page is generating almost zero impressions. Optimize keywords (e.g., "AI Voice Cleaner", "Background Noise Remover"), screenshots, and video previews.

P1	**Monetization**	**Diversify Paywall Pricing Options**	Expand monetization beyond the $8.99/mo option by testing a $2.99/wk tier and a 5-file consumable trial pack.
P2	**Product**	**Cross-Promote via Music Separation iOS**	Add cross-promotional banners inside Music Separation iOS (which has 1,160 MAU) to funnel audio creator traffic into Vocal Cleaner.
