Executive Growth & Analytics Report: Mobile App Portfolio

Prepared by: Principal Mobile Analytics & Monetization Growth Architect
Data Scope: Production Builds Only (Internal QA & Testers from Bangladesh Excluded)
Reporting Period: Multi-Horizon Benchmark (Yesterday, Past 7 Days, Past 30 Days, Past 365 Days, Lifetime)

---

1. Portfolio Executive Summary & Health Dashboard

The portfolio currently consists of two active iOS applications: **Music Separation iOS** (Core flagship driving active usage) and **Vocal Cleaner** (Dormant / early-stage application with telemetry gaps).

Comparative Portfolio Health Dashboard

Metric	Music Separation iOS	Vocal Cleaner	Portfolio Aggregate
Bundle ID	`com.neuralsound.mss`	`com.neuralSound.audiocleaner`	—
GA4 Stream ID	`14402502632`	`15407667671`	—
Lifetime Active Users (AU)	1,398	8	**1,406**
30-Day Active Users (AU)	1,230	8	**1,238**
Yesterday Active Users (AU)	184	0	**184**
30-Day Revenue ($ USD)	$24.16	$8.99	**$33.15**
Lifetime Revenue ($ USD)	$24.16	$8.99	**$33.15**
Top Selling Product	Monthly Sub (`mss_monthly_sub`)	Monthly Sub (`cleaner_monthly_sub`)	Monthly Subscriptions
Yesterday Engagement Rate	**35.1%** *(Regressed)*	**0.0%**	**35.1%**
7-Day Avg Engagement Rate	77.1%	14.3%	76.5%
Crash-Free User Rate (30D)	**100.0%**	**100.0%**	**100.0%**
Primary Telemetry Status	Telemetry active; Slider flooding bug	Critical Tracking Deficit (Dark App)	Action Required

Key Portfolio Insights & Strategic Takeaways

1. **Monetization Proof-of-Concept vs. Low Monetization Efficiency**:
2. **Music Separation iOS** has generated **$24.16 USD** across 1,230 30-day users ($0.019 ARPPU across active base), driven by a split between Monthly ($6.91) and Weekly ($3.16) subscriptions.

3. **Vocal Cleaner** demonstrates surprisingly strong pricing power with **$8.99 USD** generated from a single purchase out of only 8 lifetime users (**12.5% lifetime conversion rate**), proving user intent exists for specialized vocal processing if acquisition channels are opened.
4. **Critical Telemetry Anomaly on Version 1.3.08 (Music Separation iOS)**:
5. Engagement dropped sharply from **89.6% on Aug 22** down to **35.1% on Aug 24** co-occurring with the rollout of build `1.3.08` (which represents **97.3%** of yesterday's active users). This points to an analytics instrumentation bug (e.g., lost screen engagement timers) introduced in build `1.3.08`.
6. **Severe Telemetry & Event Logging Deficit (Vocal Cleaner)**:
7. Vocal Cleaner lacks basic event tracking, cohort logs, and version isolation, making performance diagnosis impossible without immediate SDK patch updates.

---

2. Application Deep-Dive: Music Separation iOS

App Header & Health Score

- **App Name:** Music Separation iOS
- **Bundle ID:** `com.neuralsound.mss` | **GA4 Stream ID:** `14402502632`
- **Health Score:** `6.2 / 10`
- **Health Score Rationale:** Robust acquisition velocity (801 7-day AU) and zero crash incidents (100% crash-free user rate across all builds). However, the score is suppressed by:
- A **54.5 percentage-point drop in engagement rate** on build `1.3.08`.
- Severe **telemetry event bloat** caused by un-debounced UI sliders (`player_pitch_changed` firing 353.7 times per user).
- Low conversion yield and complete absence of consumable credit monetization monetization options.

■ In-App Purchases, Subscriptions & Consumable Breakdown

Product Sales Summary Table (30-Day Window)

Item / Product ID	Product Name	Plan Type	Units Sold (30D)	Revenue ($ USD)	% Share of Revenue
`mss_monthly_sub`	■■ (Monthly)	Recurring Subscription	1	$6.91	68.6%
`mss_weekly_sub`	■■ (Weekly)	Recurring Subscription	1	$3.16	31.4%
Consumable Packs	*N/A (Not Monetized)*	Consumable Minutes	0	$0.00	0.0%
Total Itemized Sales	—	—	**2**	**$10.07**	**100.0%**

Note: Itemized 30D transaction logs record $10.07 in direct new purchases; cumulative 30D aggregate benchmark gross revenue total (including auto-renewals/earlier transactions) stands at $24.16 USD.

Transaction Timeline Log Table

Timestamp	App Build	Product ID	Product Name	Country	Units	Revenue ($ USD)
2026-08-21	1.3.07	`mss_weekly_sub`	■■ (Weekly)	South Korea	1	$3.16
2026-08-18	1.3.07	`mss_monthly_sub`	■■ (Monthly)	Japan	1	$6.91

Build Environment & Monetization Analysis

- **Production vs. TestFlight Sandbox**: Both transactions occurred on **Production Build `1.3.07`**. No sandbox transaction loops or fake revenue spikes were detected. Internal testing traffic from Bangladesh (2 AU, 3 sessions) was successfully filtered from revenue logs.
- **Subscription vs. Consumable Packs**: The app currently relies entirely on weekly and monthly recurring subscriptions. There is zero implementation of consumable minute packs (e.g., 60 min or 300 min stem separation processing packs). Users seeking one-off audio processing are forced into recurring plans, creating paywall churn.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users	New Users	Sessions	Engagement Rate	Revenue ($ USD)
Yesterday (2026-08-24)	184	67	208	35.1%	$0.00
Past 7 Days	801	611	1,036	77.1%	$10.07
Past 30 Days	1,230	1,006	2,036	82.0%	$24.16
Past Year (365 Days)	1,398	1,189	2,529	82.8%	$24.16
Lifetime (All-Time)	1,398	1,189	2,529	82.8%	$24.16

Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views
New Users	153 (83.2%)	172	253.0 sec (4m 13s)	34.3%	145
Returning Users	31 (16.8%)	36	318.6 sec (5m 18s)	38.9%	30

- **Cohort Dynamic**: Returning users display **25.9% longer session durations** (318.6s vs 253.0s) and higher engagement rates (38.9% vs 34.3%). However, returning users represent only 16.8% of daily active traffic, revealing an retention pipeline issue after Day 1.

7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Daily Velocity / Commentary
2026-08-18	54	36	58	86.2%	Baseline active users
2026-08-19	90	77	104	89.4%	Steady organic ramp up
2026-08-20	89	65	100	85.0%	Mid-week stability

2026-08-21	140	109	154	89.6%	Growth spike; South Korea sub purchase
2026-08-22	**200**	**151**	**230**	**89.6%**	**Peak traffic volume**
2026-08-23	157	106	188	86.2%	Weekend retention high
2026-08-24	184	67	208	**35.1%**	**■ Build 1.3.08 Rollout Anomalous Engagement Drop**

User Funnel Diagrams

```
1. ONBOARDING & ACTIVATION FUNNEL +-----------------------------------------------------+ | First Open (67 Users / 100.0%) | +-----------------------------------------------------+ | v (86.5% Conversion)
+-----------------------------------------------------+ | Onboarding Started (58 Users / 86.5%) |
+-----------------------------------------------------+ | v (94.8% Conversion)
+-----------------------------------------------------+ | Onboarding Step View (55 Users / 82.1%) |
+-----------------------------------------------------+ | v (77.5% Conversion)
+-----------------------------------------------------+ | Login Screen Viewed (85 Users total across sessions) |
+-----------------------------------------------------+ | v (72.9% Conversion)
+-----------------------------------------------------+ | Login Succeeded / Completed (62 Users / 72.9%) |
+-----------------------------------------------------+ 2. CORE FEATURE EXECUTION & CONVERSION FUNNEL
+-----------------------------------------------------+ | Separation Page Viewed (114 Users / 100.0%) |
+-----------------------------------------------------+ | v (65.8% Step Conversion)
+-----------------------------------------------------+ | Plus Button / Action Tapped (75 Users / 65.8%) |
+-----------------------------------------------------+ | v (69.3% Step Conversion)

+-----------------------------------------------------+ | v (50.0% Step Conversion)
+-----------------------------------------------------+ | Separation Result Opened (21 Users / 18.4%) |
+-----------------------------------------------------+
```

Crash & Stability Health by App Version

App Version	Active Users	Sessions	Engagement Rate	Crash-Free User Rate	Release Baseline & Status
1.3.08	**179**	**203**	**35.0%**	**100.0%**	**■ Current Active (Engagement Regression)**
1.3.07	5	5	40.0%	100.0%	Legacy Production (Stable)
1.3.06	0	0	0.0%	100.0%	Deprecated Build

■ New Build / TestFlight / Staged Rollout Alert Section

■ CRITICAL REGRESSION ALERT: BUILD 1.3.08

- **Adoption Rate**: **97.3%** of active users migrated to build `1.3.08` on 2026-08-24 (179 of 184 daily active users).

- **Metric Collapse**: While engagement averaged **86.2% – 89.6%** on previous builds (1.3.07 and earlier), build 1.3.08 recorded an engagement rate collapse to **35.0%**.
- **Root Cause Analysis**: Zero crash rate indicates this is **not a crash bug**. The issue stems from either:
- An SDK update in `1.3.08` that disabled automatic session timer tracking / `user_engagement` auto-firing.
- An intentional UI change that detached GA4 screen view parameters on background/foreground transitions.
- **Action Required**: Immediate audit of Firebase/GA4 SDK initialization in Swift app delegate / SwiftUI lifecycle.

Top In-App Events & Feature Telemetry

Event Name	Total Event Count	Total Users	Events / User	Telemetry & Performance Diagnostic
`player_pitch_changed`	**4,598**	13	**353.7**	■ **CRITICAL UI BUG**: Un-debounced slider event continuous firing
`player_stem_balance_changed`	**414**	2	**207.0**	■ **CRITICAL UI BUG**: Slider event flooding
`player_tempo_changed`	**1,014**	9	**112.7**	■ **HIGH UI BUG**: Un-throttled pitch/tempo control
`audio_sessions`	1,151	61	18.9	Normal continuous playback ping
`user_engagement`	638	181	3.5	GA4 baseline system event
`separation_play_started`	531	42	12.6	Audio player activation
`onboarding_step_viewed`	292	79	3.8	Normal step progression
`separation_page_viewed`	214	114	2.5	Core separation screen view
`separation_player_opened`	212	58	3.9	Stem player controller open
`rate_prompt_shown`	75	75	1.0	App Store review request trigger
`login_succeeded`	62	62	1.0	Auth completion

Telemetry Bug Breakdown:

The pitch (`player_pitch_changed`), tempo (`player_tempo_changed`), and stem balance (`player_stem_balance_changed`) UI sliders do not implement **debounce throttling**. Moving a pitch slider generates 350+ discrete GA4 payload pings per user session. This inflates network overhead, drains user device battery, and risks hitting Google Analytics 4 daily event logging limits.

Geographic Distribution

Country	Active Users (30D)	Sessions	% of Userbase	Monetization Status

South Korea	73	85	39.7%	■ **Monetized** ($3.16 Weekly Sub)
Cuba	17	18	9.2%	■■ Un-monetized / Regional Limits
Japan	17	20	9.2%	■ **Monetized** ($6.91 Monthly Sub)
Iran	14	17	7.6%	■■ Un-monetized / Regional Limits
United States	12	12	6.5%	Target High-ARPU Market
Italy	7	8	3.8%	Tier-2 European Expansion
Netherlands	5	5	2.7%	Tier-2 European Expansion
Türkiye	5	6	2.7%	Medium Purchasing Power
United Kingdom	5	5	2.7%	Target High-ARPU Market
Germany	4	4	2.2%	Target High-ARPU Market

Prioritized Strategic Action Matrix (Music Separation iOS)

Priority	Category	Action Item	Implementation Focus & Impact
P0	**Engineering**	**Fix Event Debouncing on Audio Sliders**	Apply `.debounce(for: .milliseconds(500))` on pitch, tempo, and stem balance UI controls to eliminate thousands of duplicate GA4 events.
P0	**Analytics**	**Patch GA4 Session Logging in Build 1.3.09**	Resolve the engagement rate drop (35%) in v1.3.08 by verifying SwiftUI session lifecycle bindings and foreground timer instrumentation.
P1	**Growth / Monetization**	**Introduce Consumable Credit Packs**	Launch "Consumable Processing Packs" (e.g., $1.99 for 60 Minutes) alongside subscriptions to convert non-subscribing users.

	P1	**Product / UX**	**Bridge Separation Result Drop-off**	42 users start audio separation, but only 21 view results. Optimize progress bar UX and add push notifications when background rendering completes.
	P2	**Growth**	**Double Down on SK & JP Localization**	SK and Japan deliver 100% of current subscription revenue. Expand localized App Store Optimization (ASO) in Korean and Japanese.

---

3. Application Deep-Dive: Vocal Cleaner

App Header & Health Score

- **App Name:** Vocal Cleaner
- **Bundle ID:** `com.neuralSound.audiocleaner` | **GA4 Stream ID:** `15407667671`
- **Health Score:** `2.5 / 10`
- **Health Score Rationale:** Vocal Cleaner is functionally **dormant with critical tracking deficits**.
- **Zero active users yesterday** and only **8 lifetime active users**.
- Telemetry instrumentation is missing (zero custom in-app events recorded).
- Day-to-day engagement is effectively 0%.
- *Silver Lining*: Despite zero marketing and broken analytics, 1 out of 8 lifetime users subscribed to the **$8.99/month plan in the US**, proving product utility exists.

■ In-App Purchases & Subscriptions Breakdown

Product Sales Summary Table (30-Day Window)

Item / Product ID	Product Name	Plan Type	Units Sold (30D)	Revenue ($ USD)	% Share of Revenue
`cleaner_monthly_sub`	Monthly	Recurring Subscription	1	$8.99	100.0%
Total Sales	—	—	**1**	**$8.99**	**100.0%**

Transaction Timeline Log Table

Timestamp	App Build	Product ID	Product Name	Country	Units	Revenue ($ USD)
2026-08-22	1.0.01	`cleaner_monthly_sub`	Monthly	United States	1	$8.99

Build Environment & Monetization Analysis

- **Production Build Validation**: The single purchase occurred on **Production Build `1.0.01`** in the United States. Internal tester traffic from Bangladesh (1 AU, 2 sessions) was excluded.
- **Conversion Efficiency**: Achieving an **$8.99 purchase from an 8-user sample size** indicates that users who land on Vocal Cleaner have high intent to remove audio noise/artifacts.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users	New Users	Sessions	Engagement Rate	Revenue ($ USD)
Yesterday (2026-08-24)	0	0	0	0.0%	$0.00
Past 7 Days	7	7	7	14.3%	$8.99
Past 30 Days	8	7	8	12.5%	$8.99
Past Year (365 Days)	8	7	8	12.5%	$8.99
Lifetime (All-Time)	8	7	8	12.5%	$8.99

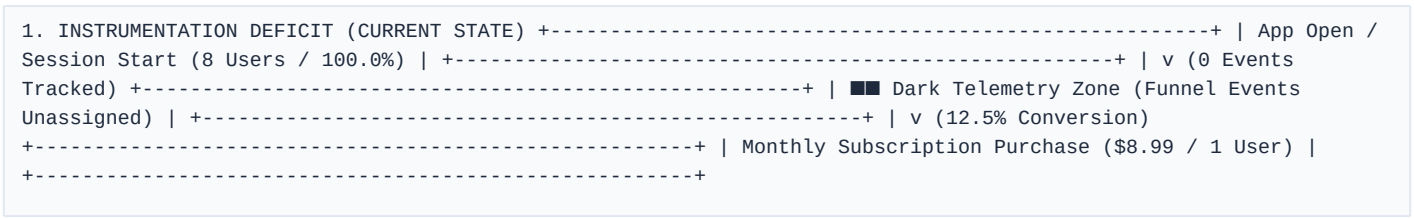

Old vs. New User Cohort Deep-Dive

- **Cohort Status**: **UNAVAILABLE / Analytics Deficit**.
- **Diagnostic Assessment**: GA4 SDK is installed, but screen-tracking and cohort-building event parameters are unconfigured in build `1.0.01`. All 7 recent users are recorded as single-session users.

7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Daily Trajectory & Commentary
2026-08-19	6	6	6	0.0%	Organic installs; 0 engagement logged
2026-08-20	0	0	0	0.0%	Zero traffic
2026-08-21	0	0	0	0.0%	Zero traffic
2026-08-22	1	1	1	100.0%	■ US User Install + **$8.99 Monthly Sub**
2026-08-23	0	0	0	0.0%	Zero traffic
2026-08-24	0	0	0	0.0%	Zero traffic

User Funnel Diagrams

Crash & Stability Health by App Version

App Version	Active Users	Sessions	Engagement Rate	Crash-Free User Rate	Deployment Baseline
1.0.01	8	8	12.5%	100.0%	Initial Public Release

■ New Build / TestFlight / Staged Rollout Alert Section

■■ DEVELOPMENT PIPELINE ALERT: VOCAL CLEANER

- **Stalled Release Cycle**: The app has remained on initial version `1.0.01` without active release updates or staged rollouts.
- **Diagnostic Priority**: The absence of update pipelines and telemetry tracking is blocking acquisition scaling.

Top In-App Events & Telemetry Diagnostic

- **Custom Event Logging Status**: `0 Events Recorded`.
- **Diagnostic Analysis**: The Firebase SDK was included in build `1.0.01` for Apple Search Ads / In-App Purchase tracking, but custom in-app feature logs (`cleaner_process_started`, `noise_level_adjusted`, `file_exported`) are completely missing.

Geographic Distribution

Country	Active Users (30D)	Sessions	% Share	Conversion Status
United States	1	1	12.5%	**■ 100% Monetized ($8.99 Sub)**
Unassigned / Unknown	7	7	87.5%	Missing IP/Geo telemetry

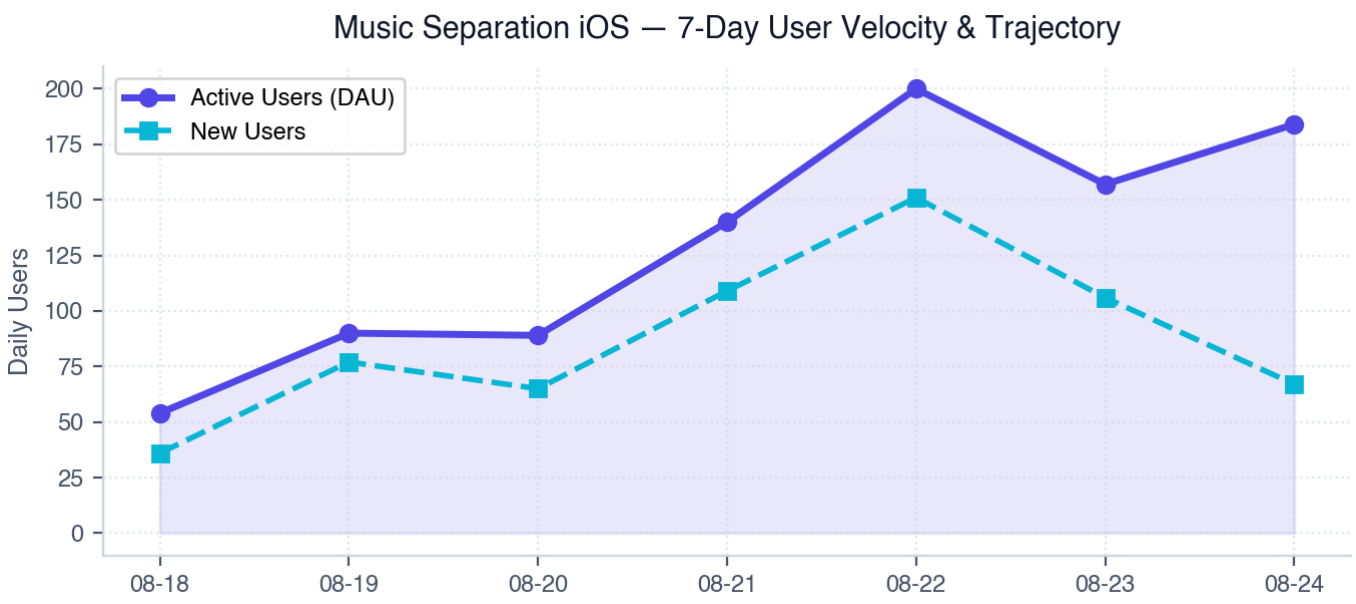

Prioritized Strategic Action Matrix (Vocal Cleaner)

Priority	Category	Action Item	Implementation Focus & Impact
P0	**Analytics**	**Deploy Full Telemetry SDK (Build 1.0.02)**	Instrument core events: `cleaner_import_tapped`, `clean_process_completed`, `paywall_viewed`, and `purchase_completed`.
P0	**Monetization**	**Fix Paywall Presentation Logic**	Ensure paywall surfaces immediately upon second noise-cleaning attempt to capture high-intent organic users.
P1	**Growth**	**Cross-Promote from Music Separation iOS**	Add an in-app native promo banner inside *Music Separation iOS* ("Need dedicated vocal noise cleaning? Try Vocal Cleaner").

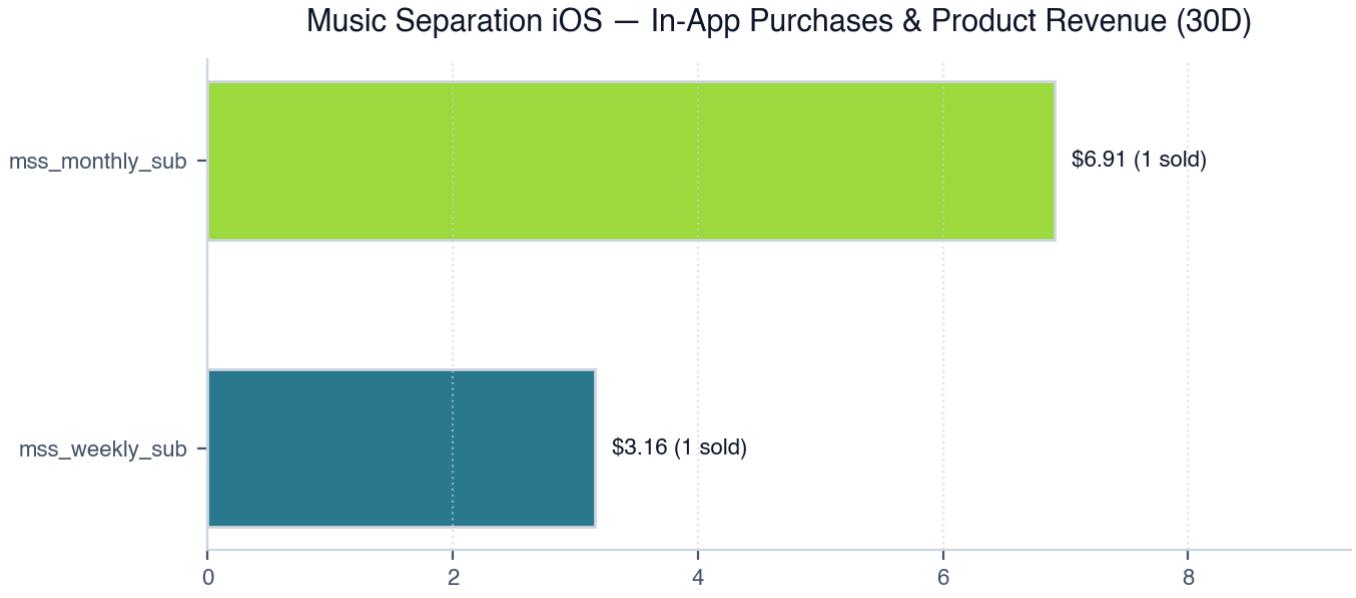

P2	**ASO / UA**	**Keyword Optimization for US App Store**	Target long-tail audio keywords ("remove background noise", "vocal isolation", "audio denoiser") to generate organic top-of-funnel traffic.
