Blended ARPU (30D)	$0.025	$0.998	**$0.032**
30D Engagement Rate	81.6%	11.1%	**81.1%**
Crash-Free User Rate	100.0%	100.0%	**100.0%**
Primary Build Version	1.3.08 (99.4% traffic)	1.0.01 (100.0% traffic)	—

Architectural Assessment & Key Growth Findings

1. **Severe Monetization Bottleneck Across Portfolio (ARPU $0.032)**: While *Music Separation iOS* demonstrates strong top-of-funnel engagement (81.6% 30-day engagement rate), monetization conversion is fundamentally broken. The portfolio generated only **$42.48 in 30 days** across 1,324 active users.
2. **Critical Telemetry Anomaly & Regression in Build `1.3.08`**: The deployment of build `1.3.08` on August 25 for *Music Separation iOS* coincides with an immediate crash in Engagement Rate—collapsing from **89.9% (Aug 22) to 26.2% (Aug 25)**—despite zero crashes. Furthermore, slider events (`player_pitch_changed`) lack debouncing, flooding telemetry with **378.2 events/user**.
3. **Vocal Cleaner Operational Dormancy**: *Vocal Cleaner* is in a critical failure state. With only **9 active users total lifetime** and 0 screen views recorded yesterday, the app functions as a dead end with an upfront paywall walling off 100% of new traffic.
4. **Localization & Purchasing Power Parity (PPP) Misalignment**: Transactions for *Music Separation iOS* show price points fluctuating wildly across tiers and regions without dynamic PPP optimization (e.g., Portugal Monthly at $9.33 vs. Japan Monthly at $6.91).

2. Application Deep-Dives

APP 1: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

- **Bundle Identifier**: `com.neuralsound.mss` | **GA4 Property**: `533563138` | **Stream ID**: `14402502632`
- **Health Score**: **6.5 / 10**
- *Rationale*: High top-of-funnel acquisition, zero platform crashes (100% crash-free rate), and solid core utility usage. However, docked heavily due to an engagement tracking regression in build `1.3.08` (26.2% engagement rate down from 89.9%), un-debounced event telemetry spamming GA4 servers, and sub-optimal paywall conversion (30D ARPU of $0.025).

2026-08-18	`1.3.07`	`mss_monthly_sub`	■■	1	$6.91	Japan

Build Environment & Monetization Analysis

- **Production vs. TestFlight/Sandbox**: All 3 production revenue transactions were registered on production builds (`1.3.07` and `1.3.08`). Internal testers (Bangladesh cohort) were cleanly segregated into sandbox, generating 5 active users, 6 sessions, and $13.98 in mock testing revenue.
- **Subscription vs. Consumable Pack Mix**: 100% of revenue stems from recurring subscriptions (66.7% Monthly, 33.3% Weekly). **Zero consumable minute packs (e.g., 60 min vs. 300 min processing credits) are currently implemented or purchasing**. High-frequency audio editors are forced into recurring subscriptions, leaving ad-hoc processing demand unmonetized.

■ Multi-Horizon Growth & Historical Scale Comparison

Lifetime (All-Time)	1,485	1,263	2,664	82.5%	$33.49

Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views
New Users	154	171	888.4 sec (14.8 min)	25.1%	167
Returning Users	20	24	478.9 sec (8.0 min)	33.3%	20

- **Cohort Behavioral Interpretation**: New users exhibit lengthy initial sessions (14.8 minutes), confirming strong initial product utility and audio processing engagement. However, returning users drop off sharply to only 20 total users (11.5% of total DAU), indicating poor long-term retention hooks and lack of re-engagement notifications.

Prioritized Strategic Action Matrix (Music Separation iOS)

Priority	Vertical	Root Cause / Issue	Strategic Action Plan	Expected Impact
P0	**Engineering**	Build `1.3.08` Engagement Rate collapse to 25.8%.	Hotfix GA4 engagement timer ping and verify UI main thread responsiveness during stem render.	Restore tracking accuracy and fix potential UX UI freezes.
P0	**Engineering**	Telemetry Event Flooding (`player_pitch_changed` 378 ev/usr).	Implement 300ms debounce / throttle wrappers on pitch and tempo UI sliders (`onEditingEnded`).	Reduce GA4 network overhead by >90%, save API quota.
P1	**Growth**	US & EU Traffic under-monetization (0% US conversion).	Introduce localized Paywall A/B testing with a **3-Day Free Trial** on Weekly & Monthly subscriptions.	Target +150% boost in trial initiation in Tier-1 countries.
P1	**Product**	High Drop-off from Plus Tap (72) to Import Start (45).	Simplify file picker UI, add direct Cloud Drive / Files integration CTA directly on primary canvas.	+25% uplift in audio processing funnels.
P2	**Monetization**	Absence of non-recurring payment options.	Release **Consumable Processing Packs** (e.g., $2.99 for 60 Minutes / $9.99 for 300 Minutes).	Monetize light users unwilling to commit to monthly recurring fees.

APP 2: Vocal Cleaner (`com.neuralSound.audiocleaner`)

App Header & Health Score

- **Bundle Identifier**: `com.neuralSound.audiocleaner` | **GA4 Property**: `533563138` | **Stream ID**: `15407667671`
- **Health Score**: **2.0 / 10**
- *Rationale*: Critical failure across acquisition, engagement, and telemetry. The app generated **0 screen views** and 0% engagement yesterday with only 1 user logging an 8.9-second session before abandoning. Total historical adoption is stalled at 9 users.

2026-08-22	`1.0.01`	`cleaner_monthly_sub`	Monthly	1	$8.99	United States

Build Environment & Monetization Analysis

- **Production vs. TestFlight/Sandbox**: The single revenue event occurred in Production build `1.0.01`. Sandbox testing logged 1 internal tester in Bangladesh (0 revenue).
- **Subscription Model Risk**: The app forces a hard upfront subscription paywall ($8.99/month) upon launch without offering a free processing trial or consumable credit options, leading to immediate churn.

Prioritized Strategic Action Matrix (Vocal Cleaner)

Priority	Vertical	Root Cause / Issue	Strategic Action Plan	Expected Impact
P0	**Engineering**	Missing screen view telemetry (`screenPageViews` = 0).	Instrument auto-screen tracking in `SwiftUI` / `UIKit` (`FirebaseAnalytics.logEvent(AnalyticsEventScreenView ...)`).	Gain UI screen visibility.
P0	**Product**	Upfront hard paywall causing 100% bounce rate.	Redesign onboarding flow: allow users to clean 1 free audio file before displaying paywall.	Increase user activation and engagement rate to >50%.
P1	**Growth**	Lack of organic / paid user acquisition (9 lifetime users).	Launch Apple Search Ads (ASA) targeting keywords: "vocal remover", "denoise audio", "clean voice".	Establish initial baseline acquisition channel.
P2	**Monetization**	Single rigid subscription tier ($8.99/mo).	Introduce Weekly tier ($2.99/wk) and 10-Minute Consumable Credit Pack ($1.99).	Expand conversion surface area for casual users.
