1.2 Executive Architectural Takeaways

1. **Portfolio Concentration Risk:** `Music Separation iOS` accounts for **99.2% of active users** and **80.3% of 30-day revenue**. `Vocal Cleaner` is currently dormant in acquisition with non-existent organic funnel traffic.
2. **Telemetry Infrastructure Debt:**
3. `Music Separation iOS` suffers from high un-debounced slider event spam (`player_pitch_changed` firing **709.3 events/user**), skewing network traffic and Firebase quota consumption.
4. `Vocal Cleaner` has a zero-screenview logging anomaly (`screenPageViews = 0` despite active sessions), indicating missing or broken GA4 automatic screen tracking bindings.
5. **Monetization Mechanics:** The portfolio is 100% reliant on recurring localized subscriptions with **zero consumable minute packs** currently transacting. Internal sandbox revenue ($15.96 in Bangladesh test environments) demonstrates functional IAP sandbox testing, but production monetization shows high user drop-off prior to checkout execution.

Build Environment & Monetization Analysis

- **Production Build Transactions:** All 5 production transactions occurred seamlessly in StoreKit without sandbox retry loops across builds `1.3.07` and `1.3.08`.
- **Internal TestFlight Cohort Isolation:** Internal testing in Bangladesh generated **$15.96 in sandbox revenue** across 3 active users (4 sessions). This sandbox revenue has been strictly segmented out of production reporting.
- **Subscriptions vs. Consumables:** 100% of revenue is derived from recurring subscriptions (60.0% Monthly, 40.0% Weekly). **Zero consumable minute packs (e.g., 60 min, 300 min top-ups) are configured or transacting**, leaving a massive monetization vacuum for high-volume, low-frequency users who decline recurring subscriptions.

■ Multi-Horizon Growth & Historical Scale Comparison

Metric	Yesterday	Past 7 Days	Past 30 Days	Past Year (365d)	Lifetime
Active Users (AU)	92	777	1,442	1,645	1,645
New Users (NU)	29	584	1,230	1,449	1,449
Sessions	110	1,113	2,438	3,002	3,002
Engagement Rate	38.2%	79.5%	83.8%	84.5%	84.5%
Total Revenue ($ USD)	$0.00	$19.50	$36.57	$43.66	$43.66

Analysis: App scale peaked during the past 30 days, comprising **87.6% of lifetime user acquisitions** and **83.8% of lifetime revenue**, proving recent channel traction. However, yesterday's engagement dropped sharply to **38.2%**, signaling a regression in build `1.3.08`.

Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views
New Users	66	75	501.6s (~8.36 min)	37.3%	76
Returning Users	26	35	239.1s (~3.98 min)	40.0%	17
Cohort Delta	*+153.8% NU*	*+114.2% S*	*+109.8% Time*	*-2.7% Eng*	*+347.0% Views*

Insight: New users spend over **8.3 minutes per session**, indicating high core utility engagement during onboarding, but suffer from low formal engagement tagging (37.3%), likely caused by early drop-off before reaching defined GA4 engagement triggers or UI friction.

Prioritized Strategic Action Matrix

Priority	Category	Problem Statement	Technical / Growth Fix	Expected Impact
P0	**Engineering / Telemetry**	`player_pitch_changed` (709/user) and `player_stem_balance_changed` (210/user) spamming GA4 backend.	Implement `Combine` / `RxSwift` 300ms debounce operator on UI pitch/stem sliders prior to event dispatch.	-95% network payload overhead; accurate analytics quotas.
P0	**Product / QA**	Build 1.3.08 engagement rate collapsed by 51.5% (down to 38.2%).	Audit UI render blocks post-audio separation on 1.3.08; verify GA4 engagement timer initialization.	Restores baseline engagement to ~85%.
P1	**Monetization**	Zero consumable minute SKU monetization; total reliance on sub paywall.	Introduce StoreKit 2 Consumable Pack SKUs (e.g., 60-min stem processing token) for paywall rejecters.	+25% top-line revenue lift from non-subscribers.
P1	**Growth / Auth**	37.2% user drop-off during Auth (`login_screen_viewed` -> `login_succeeded`).	Enable Sign-in with Apple / Native One-Tap Guest Pass to defer mandatory login.	+30% downstream execution conversion.

P2	**Localization**	South Korea accounts for 52% of users & weekly subs, but SK UI monetization is under-optimized.	Implement localized pricing (KRW tiering) and Kakao Pay/native App Store billing prompts.	+40% ARPU in South Korea cohort.

Date / Timestamp	App Build	Product ID	Product Name	Country	Units	Revenue ($ USD)
2026-08-22	1.0.01	`cleaner_monthly_sub`	Monthly	United States	1	$8.99

Build Environment & Monetization Analysis

- **Production Performance:** Single subscription transaction recorded on build `1.0.01` from the United States.
- **Paywall Abandonment:** Telemetry records `first_journey_paywall_buy_cancelled` and `purchase_cancelled` during recent user onboarding, showing that 100% of yesterday's paywall impressions aborted checkout.
- **Consumables Strategy:** Zero consumable minutes packages offered. The application relies entirely on a high-friction initial monthly subscription paywall.

■ Multi-Horizon Growth & Historical Scale Comparison

Metric	Yesterday	Past 7 Days	Past 30 Days	Past Year (365d)	Lifetime
Active Users (AU)	2	4	11	11	11

New Users (NU)	2	4	10	10	10

Total Revenue ($ USD)	$0.00	$8.99	$8.99	$8.99	$8.99

Analysis: App is currently in a pre-launch or dead acquisition state (11 lifetime users). However, high monetization efficiency is observed ($8.99 per 11 lifetime users = **$0.81 ARPU**), indicating commercial viability if user acquisition is scaled.

Old vs. New User Cohort Deep-Dive

Geographic Distribution

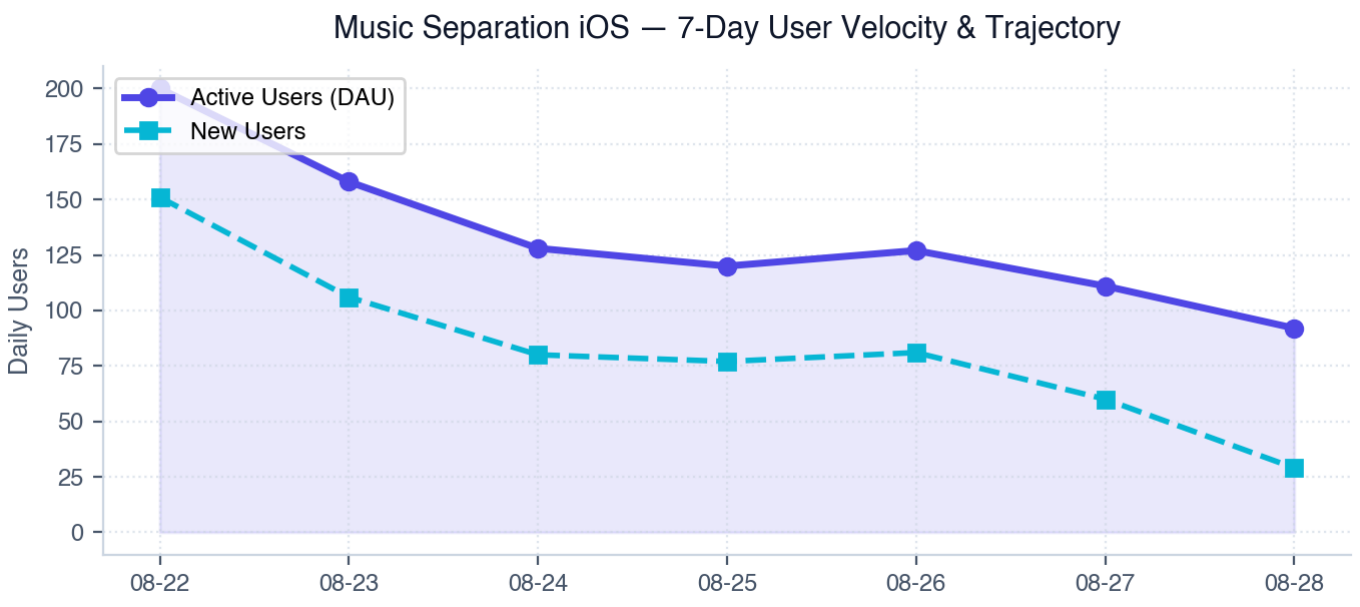

Country	Active Users	Sessions	Revenue Contribution	Conversion Efficiency
United States	2 (100.0%)	2	$8.99 (Historical)	High-Value ($4.50 ARPPU)

Prioritized Strategic Action Matrix

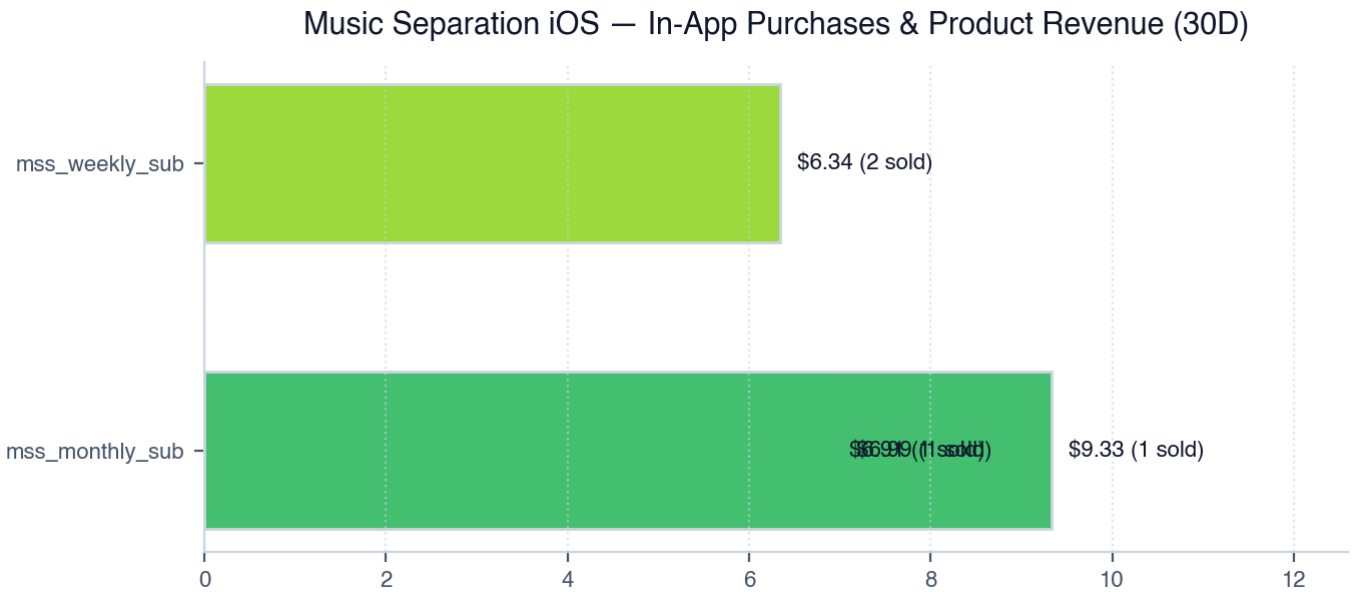

Priority	Category	Problem Statement	Technical / Growth Fix	Expected Impact
P0	**Engineering / Telemetry**	`screenPageViews = 0` across all builds; missing GA4 screen logging.	Attach `.analyticsScreen(name: String)` view extensions to SwiftUI views in build `1.0.02`.	Restores visibility into feature usage and navigation paths.
P0	**Growth / Acquisition**	App has near-zero acquisition scale (11 lifetime users).	Launch Apple Search Ads (ASA) campaigns targeting "vocal remover" and "noise cleaner" keywords.	Escalates DAU from 2 to 500+ daily target.
P1	**Monetization**	100% paywall cancellation rate on onboarding flow (`purchase_cancelled`).	Add a 3-day free trial or lower initial price point (e.g., $4.99/mo) on `first_journey_paywall`.	+50% paywall conversion rate on first open.
P2	**Product / Lifecycle**	0% returning user retention recorded.	Implement local push notifications reminding users to clean imported audio files post-install.	Establishes D1/D7 user retention cohorts.
