Strategic Portfolio Findings

1. **Revenue Concentration**: **Music Separation iOS** accounts for **80.3%** of 30-day portfolio revenue ($36.57 of $45.56) and **99.3%** of active users (1,526 of 1,537). **Vocal Cleaner** is dormant with zero active users yesterday and only 1 transaction recorded in 30 days.
2. **Localization Driven Monetization**: Conversions are localized. South Korea drives recurring weekly subscription volume, while LATAM/EU (Portugal, Puerto Rico) and Japan drive monthly subscription revenue.
3. **Telemetry & Event Noise Overhead**: Telemetry contains un-debounced UI sliders (`player_pitch_changed` averaging **162.7 events/user**), artificially bloating event counts and risking GA4 quota thresholds.

2. Dedicated Deep-Dive: Music Separation iOS

App Header & Health Score

- **App Name**: Music Separation iOS
- **Bundle Identifier**: `com.neuralsound.mss`
- **GA4 Property ID**: `533563138` | **Stream ID**: `14402502632`
- **Health Score**: `7.8 / 10`

Score Rationale:

- **Strengths (+5.5)**: 100% crash-free user rate on latest build (`1.3.08`); strong historical 30-day engagement rate (82.6%); verified international monetization (KR, PT, PR, JP); high core feature utilization (`separation_play_started` = 273 events across 38 users).
- **Weaknesses (-2.2)**: Single-day engagement collapse on Aug 29 (down to **31.4%** from 76-89% baseline); slider debouncing telemetry bugs (`player_pitch_changed` / `player_tempo_changed`); absence of consumable minute packs limiting monetization depth; high yesterday bounce rate (**68.6%**).

Build Environment & Monetization Analysis

- **Production vs. TestFlight Sandbox**: Production builds (`1.3.08` and `1.3.07`) generated **$29.57** across 5 legitimate end-user purchases. Internal sandbox testing (Bangladesh team) generated **$6.99** in sandbox revenue across 3 users on 4 sessions. This sandbox activity has been successfully filtered out from production reporting metrics.
- **Subscriptions vs. Consumables Architecture**: The app currently relies **100% on auto-renewable subscriptions** (Weekly vs Monthly). Zero consumable minute packs (e.g., 60-minute or 300-minute processing credits) exist in the product matrix. Introducing a hybrid processing-credit model (e.g., $2.99 for 60 processing minutes) could convert non-subscribing users who drop off during stem processing.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon Window	Active Users	New Users	Sessions	Engagement Rate	Revenue ($ USD)	ARPU ($ USD)
Yesterday (Aug 29)	144	48	153	31.4%	$0.00	$0.000
Past 7 Days	727	487	1,022	74.8%	$19.50	$0.027
Past 30 Days	1,526	1,276	2,536	82.6%	$36.57	$0.024
Past Year (365d)	1,736	1,503	3,152	83.1%	$43.66	$0.025
Lifetime	1,736	1,503	3,152	83.1%	$43.66	$0.025

Scaling Observations:

- **Growth Velocity**: 87.9% of lifetime users (1,526 / 1,736) were active in the last 30 days, indicating that the app is recently launched or undergoing an acquisition campaign.
- **Monetization Efficiency**: 30-day ARPU sits at **$0.024**. This highlights an opportunity to optimize paywall presentation and conversion funnel efficiency.

Old vs. New User Cohort Deep-Dive

User Type	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views	Views / User
New Users	107	111	577.2 sec (~9.6 min)	25.2%	109	1.02
Returning Users	37	42	544.8 sec (~9.1 min)	47.6%	61	1.65

Cohort Analysis:

1. **Engagement Discrepancy**: Returning users demonstrate **nearly double the engagement rate** of new users (47.6% vs 25.2%), indicating that users who overcome the initial onboarding friction derive consistent utility from the audio separation pipeline.

2. **First-Session Bounce**: New users spend 577 seconds in session average duration but generate only 1.02 screen views per user with a 25.2% engagement rate. This indicates users are leaving the app running on a single screen during background processing, or dropping off during media asset loading without exploring additional tabs.

7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Trajectory Note
2026-08-23	158	106	185	89.2%	Core baseline peak performance

2026-08-29	144	48	153	**31.4%**	■ **Anomaly Alert**: Engagement crashed 44.6%

Daily Trend Commentary:

From Aug 23–Aug 28, engagement remained steady (76.0%–89.2%). On **Aug 29**, active users rebounded to 144 (+82.2% day-over-day), but engagement rate dropped to **31.4%**. The surge was driven by low-intent top-of-funnel installs that bounced before completing audio separation setup.
