Dedicated Application Deep-Dives

1. Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

- **App Name**: Music Separation iOS
- **Bundle ID**: `com.neuralsound.mss` | **GA4 Property ID**: `533563138` | **Stream ID**: `14402502632`
- **Health Score**: **7.2 / 10**
- *Rationale*: Outstanding core engagement history (30D Engagement Rate at 83.4%) and rock-solid crash stability (100.0% crash-free rate across 1.3.08). Monetization is functioning globally (South Korea, US, Portugal, Japan, Puerto Rico). However, the score is

penalized due to a **51.2% drop in engagement rate on Aug 30 (37.1%)** following the rollout of build `1.3.08`, combined with severe UI telemetry event spam (`player_pitch_changed` generating 227 events/user due to missing slider debouncing).

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (Past 30 Days)

Note: Sales table reflects direct SKU attribution totaling $36.56; GA4 aggregate revenue gross benchmark accounts for $43.56 due to local currency/tax adjustments.

Build Environment & Monetization Analysis

- **Production vs. TestFlight Baseline**: All transactions were generated within Production builds (`1.3.07` and `1.3.08`). Sandbox test transactions from internal QA teams (Bangladesh) were successfully isolated and removed. No TestFlight auto-renew retry loops or zero-value sandbox transactions contaminate production revenue.
- **Subscription Mechanics**: Revenue is driven entirely by Subscriptions (82.66% Monthly vs. 17.34% Weekly). There are currently **0 Consumable Minute Packs** (e.g., 60-minute or 300-minute credits) offered in the SKU matrix. Light users who bounce during trial onboarding would benefit from a low-friction consumable pay-as-you-go option.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users (AU)	New Users (NU)	Total Sessions	Engagement Rate	Revenue ($ USD)	ARPU ($ USD)

Yesterday	117	45	132	37.1%	$6.99	$0.059
Past 7 Days	649	433	927	75.0%	$26.49	$0.041
Past 30 Days	1,558	1,325	2,603	83.4%	$43.56	$0.028
Past Year (365d)	1,774	1,555	3,251	83.5%	$50.65	$0.029
Lifetime	1,774	1,555	3,251	83.5%	$50.65	$0.029

Analysis: 87.8% of all lifetime users were acquired within the last 30 days (1,558 / 1,774), demonstrating that the application is in an explosive user acquisition/launch phase. However, lifetime ARPU ($0.029) highlights an monetization gap relative to high user engagement.

Old vs. New User Cohort Deep-Dive (Yesterday)

User Cohort	Active Users	Total Sessions	Avg Session Duration	Engagement Rate	Screen Views	Screen Views / User
New Users	87	96	432.2s (7.2m)	35.4%	134	1.54
Returning Users	30	36	343.9s (5.7m)	41.7%	53	1.76
Total / Avg	**117**	**132**	**408.1s (6.8m)**	**37.1%**	**187**	**1.60**

Key Finding: New users spend *longer* per session (7.2 minutes) than returning users (5.7 minutes), indicating high initial discovery friction during file upload/processing configuration. However, Returning Users show higher engagement rates (41.7% vs 35.4%).
