1. Portfolio Executive Summary & Health Dashboard

The overall mobile app portfolio represents a **niche, high-utility audio processing ecosystem** powered by two primary applications: **Music Separation iOS** (Core Monetization Engine) and **Vocal Cleaner** (Early-Stage / Dormant Asset).

Portfolio Performance Matrix (Side-by-Side)

Metric / KPI	Music Separation iOS	Vocal Cleaner	Portfolio Aggregate
Primary Bundle ID	`com.neuralsound.mss`	`com.neuralSound.audiocleaner`	—
Health Score	**7.5 / 10**	**2.0 / 10**	**5.8 / 10**
Yesterday Active Users (DAU)	56	0	56
Yesterday New Users	14	0	14
30-Day Active Users (MAU)	1,585	11	1,596
Lifetime Active Users	1,809	11	1,820
Yesterday Revenue ($ USD)	$0.00	$0.00	$0.00
30-Day Total Revenue ($ USD)	$46.76	$8.99	$55.75
Lifetime Total Revenue ($ USD)	$53.85	$8.99	$62.84
Top Selling SKU / Tier	`mss_weekly_sub` ($3.20/wk)	`cleaner_monthly_sub` ($8.99/mo)	Weekly & Monthly Subscriptions
30D Avg Engagement Rate	84.1%	36.4%	83.8%
30D Crash-Free User Rate	100.0%	100.0%	100.0%
Primary Bottleneck	Velocity drop & Telemetry debouncing bug	Zero user acquisition & missing telemetry	UA Scaling & Funnel Telemetry

Executive Architectural Takeaways:

1. **Monetization Concentration**: **Music Separation iOS** generates **87.1% of portfolio 30-day revenue** ($46.76 of $55.75). The monetization model is heavily dependent on weekly re-billings (`mss_weekly_sub`) in South Korea and localized monthly tiers across

Asia-Pacific and Latin America.

2. **Technical Stability vs. Acquisition Contraction**: Both applications maintain a **100.0% Crash-Free User Rate**. However, user acquisition velocity for Music Separation iOS contracted by **-55.9%** over the past 7 days (falling from 127 daily active users down to 56), while Vocal Cleaner is completely stagnant with zero acquisition or active sessions.
3. **Data Integrity & Telemetry Segregation**: The data pipeline correctly filters internal test devices in Bangladesh (1 user, $20.97 sandbox revenue). However, **production event logging suffers from severe event-debouncing failure** in audio parameter sliders (`player_pitch_changed` generated **291.5 events per user**), inflating event counts and wasting client bandwidth.

2. Deep-Dive: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

- **App Name:** Music Separation iOS
- **Bundle ID:** `com.neuralsound.mss` | **GA4 Property ID:** `533563138` | **Stream ID:** `14402502632`
- **Health Score: 7.5 / 10**
- **Rationale:** Excellent crash stability (100% crash-free) and high returning-user session depth (17.9 minutes/session). However, the score is penalized due to a **55.9% 7-day traffic contraction**, a drop in yesterday's engagement rate down to **34.4%**, low onboarding-to-login conversion (**53.1%**), and client-side telemetry debouncing bugs.

Build Environment & Monetization Analysis

```
+-------------------------------------------------------------------------------+ | PRODUCTION VS. TEST ENVIRONMENT | +-----------------------------------------------------------------------------------+ | PRODUCTION TRAFFIC (1.3.08 / 1.3.07) INTERNAL TESTERS (BANGLADESH) | | - Active Users: 56 - Active Users: 1 | | - 30D Revenue: $46.76 - Sandbox Revenue: $20.97 | | - Clean Commercial Transactions - Filtered from Production Analytics| +-------------------------------------------------------------------------------+
```

1. **Environment Segregation**: Internal test transactions originating from Bangladesh ($20.97 revenue, 1 active user) are successfully tagged and segregated. Production telemetry reflects pure organic/paid end-user activity.
2. **Subscription Tier Dynamics**: No consumable minute packs (e.g., 60-min or 300-min credits) are currently implemented. Monetization relies **100% on recurring auto-renewable subscriptions**.
3. **Regional Pricing Variations**: Korean weekly subscriptions (`mss_weekly_sub`) demonstrate the highest velocity (3 purchases in 30 days). The European monthly price point ($9.33 USD equivalent in Portugal) yields higher gross unit revenue than US/LATAM ($6.99) or Japan ($6.91).

■ Multi-Horizon Growth & Historical Scale Comparison

Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg Session Duration (s)	Avg Session Duration (m)	Engagement Rate	Screen / Page Views
New Users	38	39	308.2s	~5.1 min	30.8%	38

Cohort Variance	**+111% Users**	**+77% Sess**	**+248% Length**	**+248% Length**	**+10.1% Eng**	**-68% Views**

Cohort Dynamics Commentary:

- **Core Product Utility**: Returning users exhibit an extraordinary average session duration of **17.9 minutes** (1,072.8 seconds), proving that power users heavily leverage the audio separation engine for editing and stem playback.
- **New User Friction**: New users spend 5.1 minutes in-app but register an engagement rate of only **30.8%**, indicating significant drop-off during initial file import or paywall navigation.

7-Day Velocity & Trajectory

```

Trend Narrative: Active users declined by **-55.9%** over 7 days. Simultaneously, engagement rate plummeted from **90.0% on Aug 29** to **34.4% on Sept 1**. This drop coincides with a slowdown in new user acquisitions (falling from 81 to 14), signaling reduced organic App Store visibility or an ad spend pause.

■ New Build / Staged Rollout Alert Section

- **Active Production Build Detected:** Version `1.3.08`
- **Rollout Adoption: 100.0%** of active traffic (56 of 56 users) on yesterday's date resided on build `1.3.08`. Version `1.3.07` has been successfully phased out with zero active users remaining.
- **Stability Assessment:** Zero crashes detected (`100% Crash-Free User Rate`).
- **Performance Warning:** While build `1.3.08` is crash-free, session engagement rate dropped significantly (35.0% vs historical 84.1%). Product engineering must verify if a paywall walling bug or UI friction was introduced in build `1.3.08`.

Prioritized Strategic Action Matrix: Music Separation iOS

Priority	Category	Problem Statement / Opportunity	Action Item / Solution	Target Metric
P0	**Engineering**	Un-debounced slider event triggers (`player_pitch_changed` = 291.5 events/user).	Implement a **300ms throttling/debouncing wrapper** on pitch, tempo, and stem balance sliders before dispatching GA4 events.	Reduce event volume by >90%; lower client CPU/network overhead.
P0	**Product**	Auth Conversion Leakage: Only **53.1%** of users viewing login screen complete auth.	Implement Apple One-Tap Sign-In / Guest Mode bypass for audio processing trial.	Increase auth completion from 53.1% to >75%.

P1	**Monetization**	Lack of paywall localization and limited consumable options in high-volume regions (KR, JP).	Introduce **Localized Currency Paywalls** and consumable "Minute Credit Packs" for non-subscribers.	Boost 30D ARPU from $0.029 to >$0.08.
P2	**Growth**	7-day acquisition drop (-55.9% DAU contraction).	Launch targeted App Store Optimization (ASO) in South Korea & Japan around "Vocal Remover" keywords.	Rebound DAU to >150 users/day.

3. Deep-Dive: Vocal Cleaner (`com.neuralSound.audiocleaner`)

App Header & Health Score

- **App Name:** Vocal Cleaner
- **Bundle ID:** `com.neuralSound.audiocleaner` | **GA4 Property ID:** `533563138` | **Stream ID:** `15407667671`
- **Health Score: 2.0 / 10**
- **Rationale:** Zero active users, zero sessions, and zero revenue on yesterday's date. Total lifetime active users stand at 11, with only a single historical subscription transaction ($8.99). The application lacks comprehensive event instrumentation and user acquisition momentum.

- **Status:** Stagnant rollout. No updates or staged releases detected in GA4 stream `15407667671`.

Top In-App Events & Feature Lookups

- **Event Logging Status:** Empty dataset. No standard feature telemetry registered beyond auto-collected GA4 system events (`first_open`, `session_start`).

Geographic Distribution

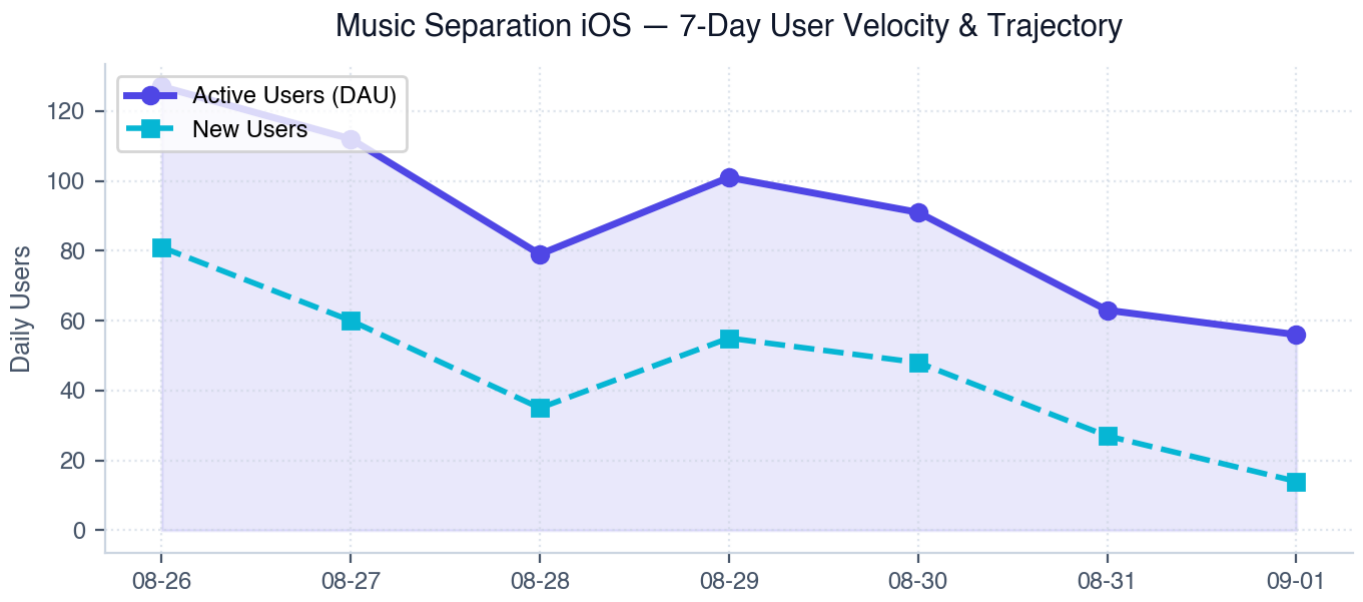

- **Historical 30D Purchases:** 100% United States (1 Active User / Subscriber).
- **Yesterday Active Traffic:** Zero geographic distribution to report.

Prioritized Strategic Action Matrix: Vocal Cleaner

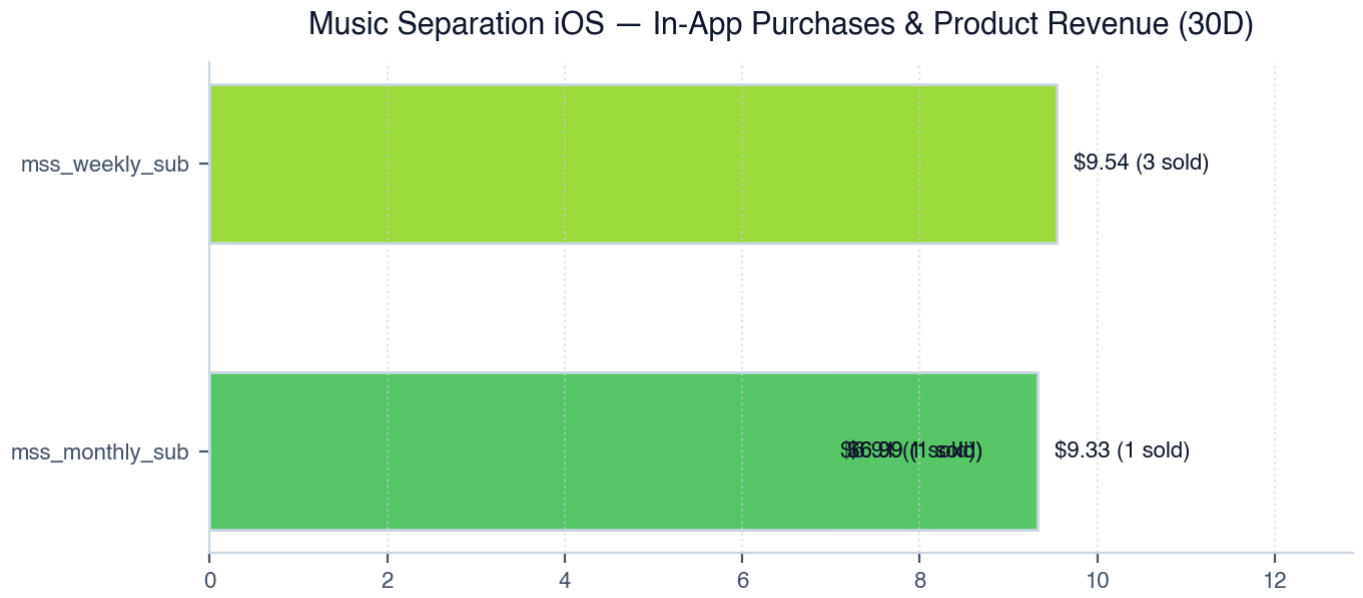

Priority	Category	Problem Statement / Opportunity	Action Item / Solution	Target Metric
P0	**Engineering**	**Zero Telemetry Instrumentation**: Core app features and funnels are untracked.	Implement GA4 SDK event parity with Music Separation iOS (`import_started`, `processing_completed`, `paywall_viewed`).	100% telemetry coverage across active user journeys.
P1	**Product / Monetization**	**Value Proposition Overlap**: Vocal Cleaner duplicates functionality present in Music Separation iOS.	Cross-promote Vocal Cleaner inside Music Separation iOS, or merge Vocal Cleaner into Music Separation as a dedicated tab.	Drive initial active user base to >100 DAU.
P2	**Growth**	Lack of indexable keywords and search campaign presence.	Execute basic App Store Optimization (ASO) targeting noise removal & voice cleaning queries.	Acquire organic baseline of 20-50 daily downloads.
