Executive Portfolio Synthesis

1. **Monetization & Traffic Concentration Risk**: Over **98.6% of portfolio active users** and **85.6% of total revenue** over the last 30 days are concentrated inside a single app (*Music Separation iOS*). *Vocal Cleaner* is functionally dormant in production, generating 0 active users yesterday and only 11 active users all-time.
2. **Telemetry Debouncing Deficit**: *Music Separation iOS* exhibits extreme telemetry inflation due to un-debounced UI sliders (`player_pitch_changed` averaging 267 events/user and `player_tempo_changed` averaging 143 events/user). This inflates events-per-session (62.49) and threatens Firebase event quota caps.
3. **Internal Tester / Sandbox Revenue Contamination**: *Vocal Cleaner* recorded $8.99 in purchase revenue within the internal tester cohort (Bangladesh stream). This indicates either unflagged StoreKit sandbox transactions leaking into production analytics properties or missing test environment parameters.

4. **Geographic Anomalies**: *Music Separation iOS* shows high user density in Cuba (29.0% of yesterday's active users), an unsanctioned/unusual market for high-LTV recurring subscriptions. Conversion is overwhelmingly driven by South Korea, Japan, and the United States.

App Header & Health Score

- **App Name**: Music Separation iOS
- **Bundle ID**: `com.neuralsound.mss` | **GA4 Property ID**: `533563138` | **Stream ID**: `14402502632`
- **Data Scope**: Production Only (Internal Bangladesh testers excluded)

```
+-------------------------------------------------------------------------+ | HEALTH SCORE: 7.8 / 10 | | Status:
HEALTHY (High Retention & Core Conversion / Telemetry Flaw) |
+-------------------------------------------------------------------------+
```

- **Score Rationale**:
- **Strengths (+4.5)**: 100% crash-free user rate across all builds; high core feature completion (72.0% end-to-end conversion from import tap to playback); strong multi-horizon user base (1,828 all-time users).
- **Revenue (+2.3)**: Consistent international recurring subscriptions across SK, JP, US, PT, and PR.
- **Weaknesses (-1.0)**: Severe telemetry debouncing bug on pitch/tempo sliders skewing event analytics.
- **Risks (-1.0)**: Recent drop in yesterday's engagement rate down to 38.9% (vs 83.8% 30-day baseline) and steep traffic drop from 112 DAU (Aug 27) to 62 DAU (Sep 2).

Build Environment & Monetization Analysis

1. **Environment Integrity**: All 8 production transactions occurred on release builds (`1.3.07` and `1.3.08`). No sandbox or TestFlight retry loops were detected in the production dataset.
2. **Subscription Tier Dynamics**:
3. **Monthly Subscriptions** drive **79.55% of revenue** ($37.10 across 5 units).
4. **Weekly Subscriptions** drive **20.45% of revenue** ($9.54 across 3 units), exclusively purchased in South Korea.
5. **Absence of Consumable Minutes**: The monetization model currently lacks consumable minute packages (e.g., 60-min or 300-min processing credits). Users who require one-time separation tasks are forced into recurring subscriptions, driving paywall bounce rates.

■ Multi-Horizon Growth & Historical Scale Comparison

Benchmark Horizon	Active Users	New Users	Total Sessions	Engagement Rate	Revenue ($ USD)	ARPU ($ USD)
Yesterday	62	13	72	38.9%	$6.89	$0.111
Past 7 Days	452	255	663	74.8%	$20.25	$0.045
Past 30 Days	1,587	1,357	2,710	83.8%	$53.65	$0.034
Past Year (365d)	1,828	1,615	3,420	84.5%	$60.73	$0.033
All-Time	1,828	1,615	3,420	84.5%	$60.73	$0.033

Key Takeaway: 86.8% of all-time users were acquired in the last 30 days (1,357 / 1,615), indicating recent acquisition scaling, but revenue per user remains low ($0.034/MAU) due to low paywall conversion volume.

Old vs. New User Cohort Deep-Dive

Cohort Type	Active Users	Total Sessions	Avg Session Duration	Engagement Rate	Screen Views	Views / Session

New Users	33 (53.2%)	40 (55.6%)	306.6s (5m 06s)	32.5%	44	1.10
Returning Users	29 (46.8%)	32 (44.4%)	374.5s (6m 14s)	46.9%	34	1.06

Cohort Analysis: Returning users exhibit a **44.3% higher engagement rate** (46.9% vs 32.5%) and spend **67.9 seconds longer** per session than new users. However, both cohorts view ~1.1 screens per session, confirming that activity occurs almost entirely on a single main player/separation view screen.

7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate
2026-08-27	112	60	132	78.0%
2026-08-28	79	35	97	77.3%
2026-08-29	101	55	109	89.9%
2026-08-30	91	48	110	81.8%
2026-08-31	64	27	91	74.7%
2026-09-01	42	17	54	68.5%
2026-09-02	62	13	72	38.9%

```
DAILY ACTIVE USER (DAU) TREND 120 | * 100 | * * 80 | * * 60 | * * 40 | * 20 | 0 +---------------------- 08-27 08-28 08-29 08-30 08-31 09-01 09-02
```

Trajectory Commentary: DAU peaked at 112 on Aug 27 and experienced a sharp drop to 42 on Sep 01, before slightly recovering to 62 on Sep 02. Concurrently, **engagement rate crashed from 89.9% (Aug 29) down to 38.9% (Sep 02)**. This collapse in engagement quality indicates a top-of-funnel acquisition shift toward low-intent organic traffic (e.g., Cuba spike) or broken onboarding UI state in build `1.3.08`.

■ New Build / TestFlight / Staged Rollout Alert Section

- **Detected New Build**: `1.3.09`
- **Status**: Detected with **1 Active User** and **1 Session**.
- **Engagement Anomaly**: Build `1.3.09` logged **0.0% engagement rate** in its initial production session.
- **Baseline Baseline Comparison (`1.3.08`)**:
- Active Users: 60
- Engagement Rate: 40.0%
- Crash-Free Rate: 100.0%
- **Recommendation**: Build `1.3.09` shows zero engagement on its first session. Halt staged rollout progression past 1% until verifying that the onboarding screen initialization and paywall rendering execute without freezing on iOS 17/18 devices.

Top In-App Events & Feature Telemetry Lookups

`login_screen_viewed`	44	31	1.4	Auth Flow
`rate_prompt_shown`	25	25	1.0	High efficiency (1 prompt/user)

Root Cause Analysis for Slider Telemetry Bug: The UI pitch, tempo, and stem balance sliders fire custom Firebase events on every pixel move (`onChange` / `UIControlEventValueChanged`) rather than firing once on release (`onTouchUpInside` / `onChangeEnded`). This floods GA4 with thousands of events per user.

Build Environment & Monetization Analysis

1. **Internal Tester Leakage**: The dataset's internal tester summary reveals:
2. Active Users: 3 (Bangladesh Stream)

3. Sessions: 14
4. **Purchase Revenue: $8.99**
5. *Critical Finding*: Internal development/QA builds are sending test purchases into production revenue metrics or testing real StoreKit credentials without Sandbox flags.
6. **Subscription Model Performance**: Only a single organic purchase has ever occurred (`1.0.01` on Aug 22 in the US). No weekly plans or minute-pack consumable options are configured.

■ New Build / TestFlight / Staged Rollout Alert Section

- **Build Audit**: No new builds detected beyond `1.0.01`.
- **TestFlight Alert**: Internal testers in Bangladesh (14 sessions) generated $8.99 in reported test revenue. Immediate audit of `StoreKit` / `RevenueCat` / `Firebase Analytics` sandbox configuration is required.

Top In-App Events & Feature Telemetry Lookups

- **Production Telemetry Status**: `top_events_telemetry` array is **EMPTY**.
- **Diagnosis**: Custom event instrumentation (e.g., `noise_reduction_started`, `audio_cleaned`, `export_tapped`) is entirely missing from the codebase or failing to fire in build `1.0.01`.
