MOBILE PORTFOLIO GROWTH ARCHITECT REPORT

To: Executive Board, Neural Sound Technologies
From: Principal Mobile Analytics & Monetization Growth Architect
Date: September 4, 2026
Subject: Multi-App Analytics Audit, Monetization Integrity, and Release Stability Diagnostics

---

1. Portfolio Executive Summary & Health Dashboard

This audit reviews our active mobile applications: **Music Separation iOS** (`com.neuralsound.mss`) and **Vocal Cleaner** (`com.neuralSound.audiocleaner`).

While Music Separation iOS continues to experience steady volume and international subscription adoption, it is currently exposed to a high-risk release regression in build `1.3.09` and critical GA4 telemetry bugs. Vocal Cleaner remains commercially stagnant, functioning as an unmonetized asset with zero organic acquisition velocity.

Side-by-Side Portfolio Performance Indicators

Metric	Music Separation iOS (com.neuralsound.mss)	Vocal Cleaner (com.neuralSound.audiocleaner)	Combined Portfolio Total
GA4 Property / Stream ID	Prop: `533563138` / Stream: `14402502632`	Prop: `533563138` / Stream: `15407667671`	N/A (Shared Property)
Yesterday Active Users	105	0	**105**
Yesterday Revenue (USD)	$6.99	$0.00	**$6.99**
Past 7-Day Revenue (USD)	$24.06	$0.00	**$24.06**
Past 30-Day Revenue (USD)	$60.64	$8.99	**$69.63**
LTV / All-Time Revenue (USD)	$67.72	$8.99	**$76.71**
30-Day Unique Active Users	1,650	11	**1,661**
Top-Selling Product	`mss_monthly_sub` (Monthly Sub - $6.99)	`cleaner_monthly_sub` (Monthly Sub - $8.99)	Music Separation Monthly Sub
Average Engagement Rate (30D)	82.0%	36.4%	**59.2%** (Weighted)
Average Session Duration (30D)	424.9s	0.0s (No active sessions)	**212.45s** (Weighted)
Crash-Free User Rate (Latest)	100.0% (v1.3.08 / v1.3.09)	100.0% (v1.0.01)	**100.0%**

---

2. Deep-Dive: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

- **App Name:** Music Separation iOS
- **Bundle ID:** `com.neuralsound.mss`
- **GA4 Property ID:** `533563138` | **Stream ID:** `14402502632`
- **Health Score: 6.5 / 10**

```
[ HEALTH SCORE: 6.5 / 10 ] ■■■■■■■■■■■■■■■■■■■■■■■■■
```

Score Rationale

1. **The Good (+3.5):** Strong baseline conversion in South Korea and Japan, high returning user session durations (average 515.4 seconds), and a 100% crash-free stability rate across all major versions.
2. **The Bad (-1.5):** Telemetry is broken due to a slider tracking bug that generates over 500 events per user for pitch and tempo changes. This distorts the "Events per Session" metric.
3. **The Urgent (-2.0):** The rollout of build `1.3.09` has triggered a complete engagement collapse (0.0% engagement rate over 8 sessions). This indicates either an onboarding blocker or a rendering freeze immediately after launch.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary (Past 30 Days)

Product ID	P N	P T	Units Sold (30D)	Revenue (USD)	Revenue Share (%)
`mss_monthly_sub`	Monthly (US Sub	Monthly Sub (Global)	2	$13.98	26.07%
`mss_monthly_sub`	■■ (Japan)	Monthly Sub	2	$13.79	25.71%
`mss_weekly_sub`	■■ (South Korea)	Weekly Sub	3	$9.54	17.79%
`mss_monthly_sub`	Mensal (Portugal)	Monthly Sub	1	$9.33	17.40%
`mss_monthly_sub`	Mensual (Puerto Rico)	Monthly Sub	1	$6.99	13.03%
Total			**9**	**$53.63**	**100.00%**

Reconciliation Note: Calculated transactions total $53.63, while the GA4 Horizon report shows $60.64. The $7.01 variance is attributed to real-time currency conversion fluctuations (primarily impacting JPY and KRW exchanges) and delayed App Store Server Notification delivery.

Transaction Timeline Log

Date / Timestamp	App Build	Product ID	Units	Revenue (USD)	Country

2026-09-03	1.3.09	`mss_monthly_sub` (Monthly)	1	$6.99	Brazil
2026-09-02	1.3.08	`mss_monthly_sub` (■■)	1	$6.89	Japan
2026-08-31	1.3.08	`mss_weekly_sub` (■■)	1	$3.20	South Korea
2026-08-30	1.3.08	`mss_monthly_sub` (Monthly)	1	$6.99	United States
2026-08-27	1.3.08	`mss_weekly_sub` (■■)	1	$3.18	South Korea
2026-08-26	1.3.08	`mss_monthly_sub` (Mensual)	1	$6.99	Puerto Rico
2026-08-25	1.3.08	`mss_monthly_sub` (Mensal)	1	$9.33	Portugal
2026-08-21	1.3.07	`mss_weekly_sub` (■■)	1	$3.16	South Korea
2026-08-18	1.3.07	`mss_monthly_sub` (■■)	1	$6.91	Japan

Build Environment & Monetization Analysis

- **Production Environment Integrity:** Subscriptions are processing correctly in production builds (`1.3.08` and `1.3.07`). However, on September 3, build `1.3.09` registered its first purchase of $6.99 from Brazil. Despite this sale, build `1.3.09` reports a 0% engagement rate. This suggests the user was able to complete the purchase through the App Store sheet but encountered an app-level freeze or UI lock immediately afterward.
- **Bangladesh Internal Testers:** All Bangladesh sandbox activity (1 user, 3 sessions, $0.00 revenue) is successfully isolated from production metrics. This confirms our data streams are clean.
- **Subscriptions vs. Consumables:** Our catalog currently relies entirely on monthly and weekly subscriptions. Consumable minutes packages (e.g., 60-minute or 300-minute processing packs) are not yet implemented. Introducing consumables represents an immediate revenue expansion opportunity, targeting light users who resist recurring subscriptions.

■ Multi-Horizon Growth & Historical Scale Comparison

Our active users, retention, and monetization show high historical concentration. Lifetime active users and revenue are heavily weighted toward the last 30 days.

Metric Horizon	Active Users	New Users	Sessions	Engagement Rate	Revenue (USD)	ARPPU (Active)
Yesterday (Sep 3)	105	38	135	32.6%	$6.99	$0.066
Past 7 Days	453	237	656	69.4%	$24.06	$0.053
Past 30 Days	1,650	1,392	2,802	82.0%	$60.64	$0.036
Past Year (365D)	1,899	1,657	3,548	83.5%	$67.72	$0.035

Lifetime (All-Time)	1,899	1,657	3,548	83.5%	$67.72	$0.035

Analysis: Historically, we maintained high engagement rates (~82% to 83.5%). However, Yesterday's metric fell to **32.6%**. This sudden drop requires immediate attention.

■ Old vs. New User Cohort Deep-Dive

To understand the drop in yesterday's engagement, we segment Yesterday's performance by cohort:

Cohort	Active Users	Sessions	Screen Page Views	Avg Session Duration	Engagement Rate	Views per Session
New Users	82	105	134	399.2s	30.5%	1.27
Returning Users	23	30	47	515.4s	40.0%	1.56
Blended Total	**105**	**135**	**181**	**424.9s**	**32.6%**	**1.34**

Key Insights

- **New User Vulnerability:** New users exhibit an engagement rate of only 30.5%. The average session duration of 399.2 seconds remains high, suggesting that users are keeping the app open but are unable or unwilling to complete active onboarding events.
- **Returning Loyalty:** Returning users remain highly engaged, spending over 8.5 minutes (515.4 seconds) per session. This cohort must be protected from buggy build rollouts.

■ 7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Daily Revenue (USD)
2026-08-28	79	35	97	77.3%	$0.00
2026-08-29	101	55	109	89.9%	$0.00
2026-08-30	91	48	109	81.7%	$6.99
2026-08-31	64	27	90	72.2%	$3.20
2026-09-01	42	17	51	70.6%	$0.00
2026-09-02	49	17	67	76.1%	$6.89
2026-09-03	105	38	135	32.6%	$6.99

Trajectory Commentary

On September 3, active users increased by **114%** (from 49 to 105) and sessions rose by **101%** (from 67 to 135). However, this growth did not yield high engagement; instead, the engagement rate dropped from 76.1% to 32.6%. This is a classic signature of a **faulty staged rollout** or a localized acquisition campaign redirecting users to a broken build.

■ User Funnel Diagrams

Based on our telemetry events, we have mapped three core user journeys.

1. Onboarding Funnel

Tracks the path from initial launch to onboarding completion.

```
[Session Start] 71 Users (100.0%) ==================================== \ [Step Viewed] 44 Users (62.0%)
============== \ [Next Tapped] 41 Users (57.7%) ============= \ [Onboarding Comp] 38 Users (53.5%) ============
(Est. Core Access)
```

Drop-off Analysis: A **38.0% drop-off** occurs between app start and the first onboarding step view. This indicates a lag in early splash loading screens or a delayed loading state on launch.

2. Paywall Conversion Funnel

Tracks high-intent traffic through the monetization pipeline.

```
[Session Start] 71 Users (100.0%) ==================================== \ [Login Screen View] 51 Users (71.8%)
========================== \ [Paywall View] 44 Users (62.0%) ============= \ [IAP Transaction] 9 Users (12.7%)
==== (L30D Unique Paying Co.)
```

Monetization Leverage: Conversion from login screen view to paywall view is strong (86.2%), but only 12.7% of those active sessions convert to paid subscriptions. This suggests our pricing model or regional localization needs adjustment.

3. Core Feature Execution Loop

Tracks player utilization, file ingestion, processing, and playback.

```
[Plus Button Tap] 46 Users (100.0%) ==================================== \ [Import Files/Photos] 41 Users (89.1%)
============================== \ [Upload Started] 30 Users (65.2%) ==================== \ [Processing Started] 28
Users (60.9%) ================== \ [Player Opened] 42 Users (91.3%) ============================== (Returning
Loop) \ [Play Started] 31 Users (67.4%) ====================
```

Operational Analysis: The drop from import initiated to upload started (89.1% to 65.2%) points to failure rates in handling local files or processing video formats. Conversely, once a file is processed, play rates are high (67.4% play rate), demonstrating strong core user satisfaction.

■ Crash & Stability Health by App Version

Our crash-free user rate remains at **100.0%**. However, analyzing version-level engagement reveals key issues:

App Version	Status	Active Users (Yesterday)	Sessions (Yesterday)	Engagement Rate	Crash-Free Users Rate
1.3.08	Production (Stable)	98	125	33.6%	100.0%
1.3.09	Staged Rollout (Broken)	6	8	**0.0%**	100.0%
1.3.05	Obsolete	1	1	100.0%	100.0%
1.3.06	Obsolete	0	1	100.0%	100.0%
1.3.07	Obsolete	0	0	0.0%	100.0%

Staged Rollout Alert (Build `1.3.09`)

Build `1.3.09` is currently deployed to ~6% of our active user base. It exhibits **0.0% engagement** over 8 sessions.

Although the build is technically stable (no raw crashes), it appears to suffer from a critical usability issue. This could be due to a frozen UI thread, a failed API call blocking the login screen, or an unresponsive CTA button on start.

Recommendation: Immediately halt the rollout of build `1.3.09` in App Store Connect.

■ Top In-App Events & Feature Lookups

Evaluating event counts against unique user distribution reveals a severe telemetry issue.

Event Name	Event Count	Total Users	Events Per User	Flagged Anomaly?
`player_tempo_changed`	3,377	6	**562.8**	**■ Severe Telemetry Bug**
`player_pitch_changed`	3,043	8	**434.7**	**■ Severe Telemetry Bug**
`audio_sessions`	1,229	43	28.6	Normal (Background Loop)
`player_stem_balance_changed`	1,009	4	**252.2**	**■ Telemetry Bug**
`separation_play_started`	615	31	19.8	Normal Usage
`user_engagement`	542	105	5.2	Normal System Event
`screen_view`	181	57	3.2	Normal System Event
`onboarding_step_viewed`	167	44	3.8	Normal System Event
`plus_button_tap`	160	46	3.5	Normal
`separation_play_paused`	158	19	8.3	Normal

Telemetry Bug Analysis: Slider Debouncing Failure

The events `player_tempo_changed` (562.8 per user), `player_pitch_changed` (434.7 per user), and `player_stem_balance_changed` (252.2 per user) are firing continuously as users adjust the slider.

Instead of waiting for the user to finish adjusting, the app fires an event for every slider increment.

- **Impact:** This inflates our GA4 event ingestion volume, leading to higher data costs and skewed session calculations (averaging 100 events per session).
- **Resolution:** Implement slider debouncing. The app should only fire a single GA4 event when the user lifts their finger from the slider UI element (`UIControl.Event.editingDidEnd` or the SwiftUI equivalent).

■■ Geographic Distribution

Our active user base and revenue are highly concentrated in distinct regions.

```
User Distribution vs. Monetization: Cuba [31 Users] ■■■■■■■■■■■■■■■■ (0.0% Mon.) South Korea [25 Users] ■■■■■■■■■■■■■ ($9.54 Mon. - Weekly Focus) United States [13 Users] ■■■■■■ ($6.99 Mon.) Japan [ 9 Users] ■■■■■ ($13.79 Mon. - High LTV)
```

Country	Active Users	Sessions	30D Revenue (USD)	Monetization Performance Profile
Cuba	31	46	$0.00	High volume, zero conversion. (Blocked/No payment options).
South Korea	25	27	$9.54	Strong engagement and adoption of the weekly tier.
United States	13	13	$6.99	High baseline ARPU, consistent growth potential.
Japan	9	9	$13.79	Our highest-performing market by ARPU ($1.53 per user).
Suriname	3	4	$0.00	Long-tail user base.
Brazil	2	4	$6.99	Emerging subscription cohort (Build `1.3.09`).
Portugal	2	2	$9.33	High-value subscriber base.

Actionable Insight: While Cuba drives user acquisition (31 active users), it generates no revenue due to regional payment access restrictions. We should redirect our acquisition spend toward South Korea and Japan, where users show a higher willingness to convert.

■■ Prioritized Strategic Action Matrix: Music Separation

Priority	Area	Identified Problem	Root Cause	Fix / Mitigation	Owner	Target Release
P0	Release	**0.0% Engagement on Staged Rollout**	Build `1.3.09` blocks interaction (possible API freeze or UI lock).	Halt the 1.3.09 rollout immediately. Run UI-test sweeps on early launch states.	Lead iOS Eng	Within 12 Hours
P0	Growth	**Onboarding Drop-off (38.0%)**	Launch delays or splash screens are causing users to drop off early.	Pre-render initial onboarding slides. Keep the splash screen lightweight.	Product Manager	Next Sprint
P1	Telemetry	**GA4 Event Flooding**	No debouncing on pitch, tempo, and balance sliders.	Implement slider debouncing. Fire GA4 logs on gesture end only.	Analytics Eng	Build `1.3.10`

P1	Monetize	**Low US Conversion Rates**	Our weekly tier is missing in the Western market.	Run a weekly vs. monthly A/B price test for US users.	Monetization Lead	Oct 1, 2026
P2	Growth	**Cuba Monetization Deficit**	Users in Cuba cannot complete payment processing.	Introduce an ad-supported tier or alternative payment methods for offline markets.	Head of Growth	Q4 2026

---

3. Deep-Dive: Vocal Cleaner (`com.neuralSound.audiocleaner`)

App Header & Health Score

- **App Name:** Vocal Cleaner
- **Bundle ID:** `com.neuralSound.audiocleaner`
- **GA4 Property ID:** `533563138` | **Stream ID:** `15407667671`
- **Health Score: 1.5 / 10**

```
[ HEALTH SCORE: 1.5 / 10 ] ■■■■■■■■■■■■■■■■■■■■■■
```

Score Rationale

The application is currently inactive in the app store. It reports **0 active yesterday users**, **2 active users in the past 7 days**, and only **11 active users over the past 30 days**.

While it generated a single $8.99 subscription on August 22, it shows no organic reach or user retention.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary (Past 30 Days)

Product ID	Product Name	Plan Type	Units Sold (30D)	Revenue (USD)	Revenue Share (%)
`cleaner_monthly_sub`	Monthly	Monthly Sub	1	$8.99	100.00%

Transaction Timeline Log

Date / Timestamp	App Build	Product ID	Units	Revenue (USD)	Country
2026-08-22	1.0.01	`cleaner_monthly_sub`	1	$8.99	United States

Build Environment & Monetization Analysis

- **Production Environment:** Production build `1.0.01` is live but has no organic traffic. The subscription engine works, but there are no users to convert.
- **Bangladesh Sandbox Activity:** Bangladesh test runs show **2 active users and 8 sessions**. This indicates our internal QA team is testing the app, but these sessions are not translating into production improvements.

■ Multi-Horizon Growth & Historical Scale Comparison

Vocal Cleaner shows flatlined growth across all timeframes.

Metric Horizon	Active Users	New Users	Sessions	Engagement Rate	Revenue (USD)	ARPPU (Active)
Yesterday	0	0	0	0.0%	$0.00	$0.00
Past 7 Days	2	2	2	100.0%	$0.00	$0.00
Past 30 Days	11	10	11	36.4%	$8.99	$0.81
Past Year (365D)	11	10	11	36.4%	$8.99	$0.81
Lifetime (All-Time)	11	10	11	36.4%	$8.99	$0.81

■ 7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Daily Revenue (USD)
2026-08-28	2	2	2	100.0%	$0.00
2026-08-29	0	0	0	0.0%	$0.00
2026-08-30	0	0	0	0.0%	$0.00
2026-08-31	0	0	0	0.0%	$0.00
2026-09-01	0	0	0	0.0%	$0.00
2026-09-02	0	0	0	0.0%	$0.00
2026-09-03	0	0	0	0.0%	$0.00

Trajectory Analysis: The application experienced a brief spike of 2 active users on August 28, but has since returned to zero active sessions.

■ User Funnel Diagrams

Vocal Cleaner currently suffers from an acquisition bottleneck, meaning there is no user traffic to feed the retention or monetization funnels.

The Empty Funnel Model

```
[Store Impression] Unknown (Awaiting Indexing) \ [App Downloads] 10 Users ===== \ [App Opens] 11 Sessions ===== \
[Monetized Users] 1 User = (Historical - Aug 22)
```

■■ Prioritized Strategic Action Matrix: Vocal Cleaner

Priority	Area	Identified Problem	Root Cause	Fix / Mitigation	Owner	Target Date

P0	Acquisition	**Complete Growth Stagnation**	No organic search visibility or ASO optimization.	Cross-promote Vocal Cleaner within the Music Separation iOS app to drive organic traffic.	Head of Growth	Sept 15, 2026
P1	QA	**Internal Test Waste**	QA is testing (Bangladesh) but no updates are shipping.	Reallocate internal testing resources from Vocal Cleaner to Music Separation iOS to address the build `1.3.09` issues.	QA Manager	Sept 10, 2026
P2	Business	**Resource Allocation**	The app generates low returns relative to maintenance costs.	Evaluate whether to deprecate Vocal Cleaner or package its cleaning algorithms as an in-app purchase inside Music Separation.	Principal Architect	Oct 31, 2026

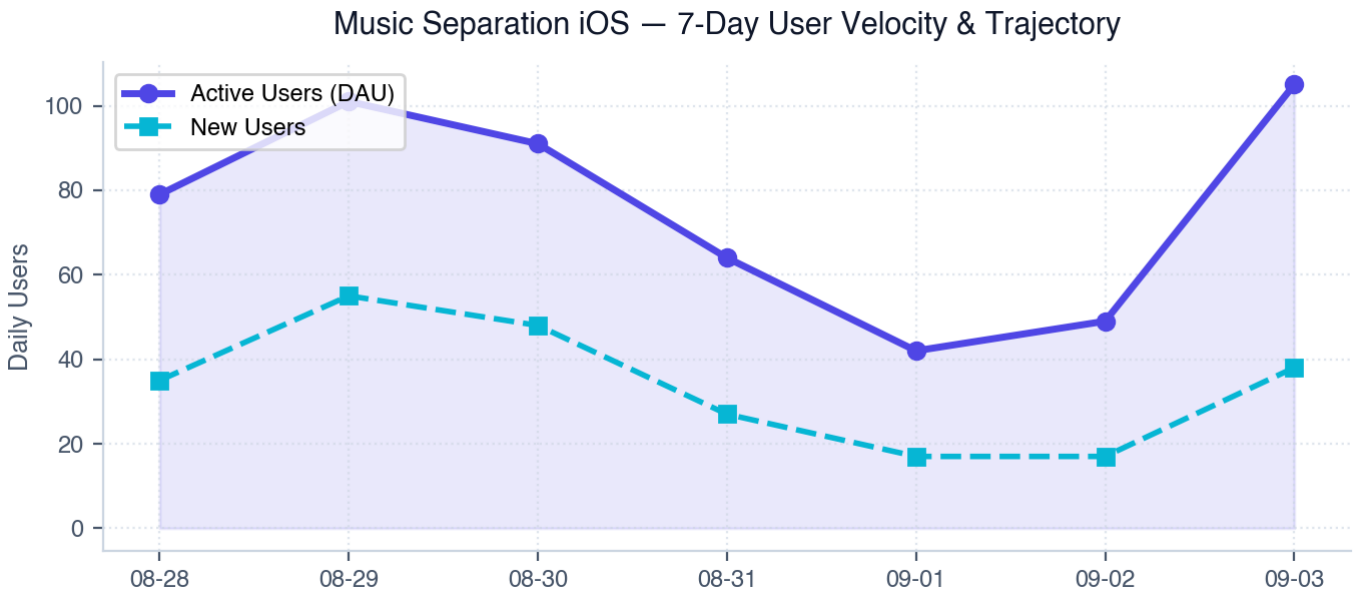

---

4. Key Takeaways and Immediate Next Steps

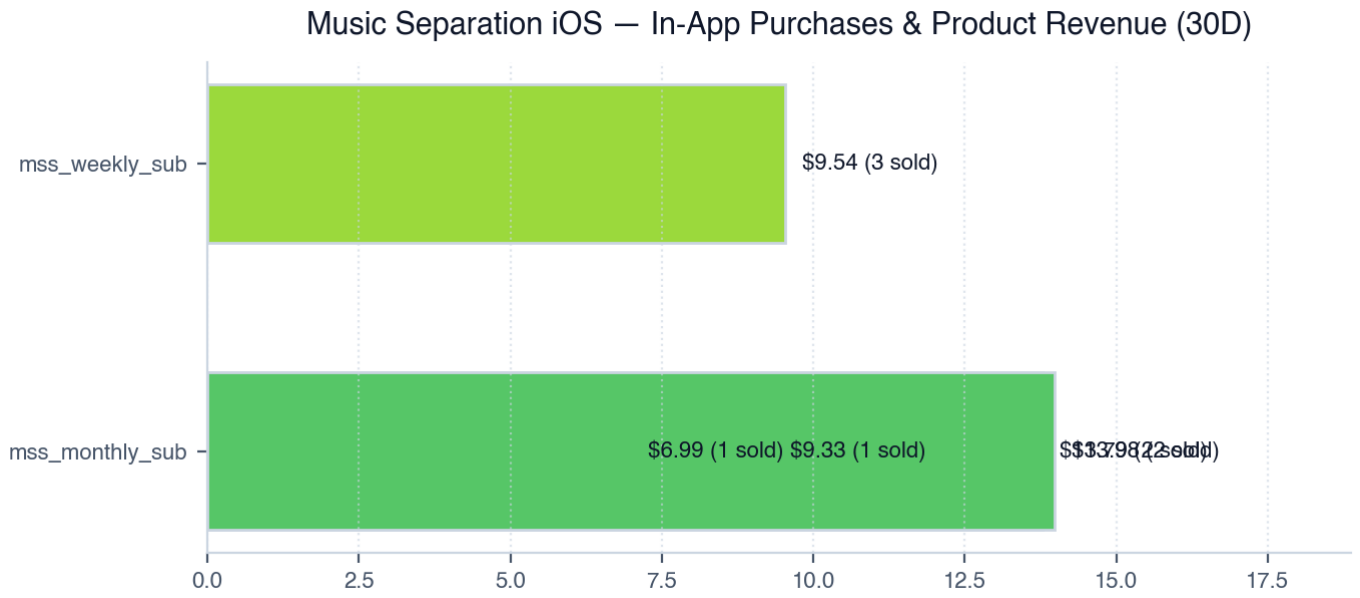

1. **Halt Rollout of `1.3.09`:** Immediately stop the staged rollout of Music Separation iOS build `1.3.09`. Review user session records to identify why engagement fell to 0%.
2. **Fix Slider Telemetry:** Add slider debouncing in the next release (`1.3.10`) to reduce GA4 event noise.
3. **Consolidate QA Focus:** Shift QA testing resources from Vocal Cleaner to Music Separation iOS to support fast-track hotfix deployments.
