Top-Selling SKU (30D)	`mss_monthly_sub` (JP / ■■)	`cleaner_monthly_sub`	`mss_monthly_sub`
30-Day Paid Units Sold	10 Units	1 Unit	11 Units
Engagement Rate (Yesterday / 30D)	26.1% / 71.1%	0.0% / 38.5%	26.1% / 70.9%
Crash-Free User Rate (30D)	**100.0%**	**100.0%**	**100.0%**
Primary Growth Driver	Organic Search / ASO (Japan)	Dormant / Inactive	Japan MSS Organic

■ Strategic Portfolio Executive Narrative

1. **Portfolio Bifurcation**: The portfolio displays a drastic divergence. **Music Separation iOS** accounts for **98.8% of 30-day active users** and **88.3% of 30-day purchase revenue**, showing rapid top-of-funnel acquisition, primarily driven by Japan. Conversely, **Vocal Cleaner** is virtually dormant, with 0 active users yesterday and only 13 total lifetime users, generating a single lifetime conversion ($8.99 USD).
2. **Growth vs. Quality Dilemma (Music Separation iOS)**: A massive user acquisition spike occurred on 2026-09-05 for Music Separation iOS (+450% active users day-over-day), but engagement rate plunged from **85.3% to 26.1%**. Build version `1.3.09` drove this surge, but early engagement telemetry indicates low-intent traffic or friction during initial onboarding.

3. **Telemetry & Event Instrumentation Flaws**: Critical telemetry bugs plague Music Separation iOS. Slider controls (`player_pitch_changed`, `player_tempo_changed`, `player_stem_balance_changed`) lack touch-up debouncing, logging up to **467.5 events per user**. This inflates event counts, risks exceeding Firebase quota limits, and obscures real user behavioral patterns.

---

2. Application Deep-Dive: Music Separation iOS

App Header & Health Score

- **App Name**: Music Separation iOS (`com.neuralsound.mss`)
- **GA4 Stream ID**: `14402502632`
- **Overall Health Score**: **7.2 / 10**
- **Score Rationale**: Strong technical stability (100% crash-free) and a strong organic growth spike in Tier-1 markets (Japan). However, the app is penalized for **extremely weak user retention** (only 37 returning users vs 694 new users), an unoptimized single-tier monetization model lacking flexible consumable minutes, a severe engagement drop on the latest production build (`1.3.09`), and high-volume event debouncing bugs.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (30-Day Window)

Note: Multi-Horizon aggregated 30D revenue includes dynamic FX adjustments ($67.69 USD total).

Product ID	Product Name / Locale	Plan Type	Units Sold (30D)	Revenue ($ USD)	% Share of Sales
`mss_monthly_sub`	■■ (Japan)	Monthly Auto-Renew	3	$20.85	34.35%
`mss_monthly_sub`	Monthly (Global/US)	Monthly Auto-Renew	2	$13.98	23.03%
`mss_weekly_sub`	■■ (South Korea)	Weekly Auto-Renew	3	$9.54	15.72%
`mss_monthly_sub`	Mensal (Brazil/Portugal)	Monthly Auto-Renew	1	$9.33	15.37%
`mss_monthly_sub`	Mensual (Puerto Rico/ES)	Monthly Auto-Renew	1	$6.99	11.52%
Total Product Sales	—	—	**10**	**$60.69**	**100.00%**

Transaction Timeline Log Table

Timestamp (Date)	App Build	Product ID	SKU Localized Name	Country	Units	Revenue ($ USD)
2026-09-05	`1.3.09`	`mss_monthly_sub`	■■	Japan	1	$7.05
2026-09-03	`1.3.09`	`mss_monthly_sub`	Monthly	Brazil	1	$6.99
2026-09-02	`1.3.08`	`mss_monthly_sub`	■■	Japan	1	$6.89

2026-08-31	`1.3.08`	`mss_weekly_sub`	■■	South Korea	1	$3.20
2026-08-30	`1.3.08`	`mss_monthly_sub`	Monthly	United States	1	$6.99
2026-08-27	`1.3.08`	`mss_weekly_sub`	■■	South Korea	1	$3.18
2026-08-26	`1.3.08`	`mss_monthly_sub`	Mensual	Puerto Rico	1	$6.99
2026-08-25	`1.3.08`	`mss_monthly_sub`	Mensal	Portugal	1	$9.33
2026-08-21	`1.3.07`	`mss_weekly_sub`	■■	South Korea	1	$3.16
2026-08-18	`1.3.07`	`mss_monthly_sub`	■■	Japan	1	$6.91

Build Environment & Monetization Structural Analysis

- **Production vs Sandbox Isolation**: Production reporting cleanly filters out Bangladesh internal tester activity (4 active users, 6 sessions, $6.99 test sandbox purchase logged). Production transactions are verified across StoreKit receipts.
- **Subscription vs Consumable Model Gap**: Revenue is currently **100% dependent on auto-renewable subscriptions** (Monthly & Weekly). There are **zero consumable minute packs** (e.g., 60-min or 300-min audio processing top-ups).
- **Monetization Vulnerability**: High drop-off during onboarding (`onboarding_completed` 631 users vs `first_open` 326 users, with high bounce rate) indicates many users resist high-commitment weekly/monthly recurring subscriptions. Introducing **Consumable Minute Packs** provides a low-friction entry point for pay-as-you-go audio separation.

■ Multi-Horizon Growth & Historical Scale Comparison

Time Horizon	Active Users	New Users	Total Sessions	Engagement Rate	Revenue ($ USD)	ARPPU ($)
Yesterday	731	326	815	26.1%	$7.05	$7.05
Past 7 Days	1,086	573	1,429	49.3%	$31.12	$10.37
Past 30 Days	2,392	1,796	3,737	71.1%	$67.69	$6.77
Past 365 Days	2,653	2,083	4,566	74.0%	$74.78	$7.48
Lifetime All-Time	2,653	2,083	4,566	74.0%	$74.78	$7.48

■ Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Total Sessions	Avg Session Duration	Engagement Rate	Screen Page Views	Views / Session
New Users	694 (94.9%)	763 (93.7%)	371.1 sec (6.18 min)	24.9%	903	1.18
Returning Users	37 (5.1%)	51 (6.3%)	316.0 sec (5.26 min)	**45.1%**	30	0.59

Cohort Analysis Summary

- **Retention Deficit**: Returning users make up only **5.1%** of active users. The app functions primarily as an acquisition bucket with high user turnover.

- **Engagement Quality Bifurcation**: Returning users convert engagement at **45.1%**, nearly double that of new users (**24.9%**). Re-engaged users find high utility in the stem player features (`separation_play_started`), but top-of-funnel retention fails to transition new users into habits.

■ 7-Day Velocity & Trajectory

Date	Active Users	New Users	Total Sessions	Engagement Rate	Day-over-Day Trajectory
2026-08-30	91	48	109	81.7%	Baseline weekend volume
2026-08-31	64	27	90	72.2%	-29.6% Active Users
2026-09-01	43	17	52	71.2%	Mid-week trough
2026-09-02	49	17	67	76.1%	Stable baseline
2026-09-03	81	50	118	83.1%	Initial build 1.3.09 uptake
2026-09-04	133	88	184	85.3%	+64.2% user surge
2026-09-05	**731**	**326**	**815**	**26.1%**	**■ +449.6% Surge (Japan Spike)**

Trajectory Commentary

A massive influx of traffic hit on September 5th (731 active users vs 133 previous day). While top-of-funnel user acquisition surged, overall engagement dropped to 26.1%. This suggests the surge was driven by an unoptimized campaign or organic App Store feature in Japan, where users downloaded the app but bounced quickly during onboarding or paywall presentation.

■■ Crash & Stability Health by App Version

App Version	Active Users	Total Sessions	Engagement Rate	Crash-Free User Rate	Production Status
1.3.09	675	743	24.5%	**100.0%**	Active Production (92.3% Adoption)
1.3.08	55	69	43.5%	**100.0%**	Legacy Production
1.3.07	1	1	0.0%	**100.0%**	Deprecated
1.3.02	1	1	100.0%	**100.0%**	Deprecated

■ New Build / TestFlight / Staged Rollout Alert Section

```
[ALERT SYSTEM: STAGED ROLLOUT BEHAVIOR DEVIATION DETECTED] ---------------------------------------------------------------------------------------- Target Build : v1.3.09 (Bundle: com.neuralsound.mss) Baseline Build : v1.3.08 Adoption Rate : 92.3% (675 / 731 Active Users) CRITICAL ANOMALY: Engagement rate plummeted from 43.5% (v1.3.08) down to 24.5% (v1.3.09) [-43.6% Relative Drop]. Crash-Free Users remain at 100.0% (Zero technical exceptions logged). DIAGNOSIS: The drop in engagement rate on build 1.3.09 is not driven by technical instability or crashes. Instead, it points to a non-blocking UX bug, an overly aggressive forced paywall layout, or poor onboarding retention during the Japan traffic influx.
```

■ Top In-App Events & Telemetry Bug Analysis

High-Volume Telemetry Log

1. `player_pitch_changed`: **18,231 events** across **40 users** (**467.5 events/user**) ■■ *TELEMETRY BUG*
2. `player_tempo_changed`: **5,149 events** across **32 users** (**171.6 events/user**) ■■ *TELEMETRY BUG*
3. `audio_sessions`: 4,921 events across 276 users (17.9 events/user)
4. `user_engagement`: 3,174 events across 718 users (4.4 events/user)
5. `onboarding_step_viewed`: 2,589 events across 337 users (7.8 events/user)
6. `separation_play_started`: 2,531 events across 214 users (11.9 events/user)
7. `onboarding_next_tapped`: 1,920 events across 324 users (5.9 events/user)
8. `player_stem_muted`: 1,508 events across 56 users (27.4 events/user)
9. `player_stem_balance_changed`: **1,054 events** across **7 users** (**175.7 events/user**) ■■ *TELEMETRY BUG*

Telemetry Root-Cause Analysis

Events for pitch (`player_pitch_changed`), tempo (`player_tempo_changed`), and stem balance (`player_stem_balance_changed`) are firing continuously on every pixel movement during slider drag events (`UIControlEventValueChanged`) rather than waiting for touch release (`UIControlEventTouchUpInside`).

Impact: This floods the analytics pipeline, burns through logging quotas, distorts session event metrics (**71.8 events/session**), and risks payload throttling by GA4 APIs.

■■ Geographic Distribution

```
======================================================================================== TOP USER GEOGRAPHIES (ACTIVE USERS / SESSIONS) ======================================================================================== 1. Japan : ■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■ 528 Users / 580 Sessions 2. Cuba : ■■■■ 41 Users / 48 Sessions 3. United States : ■■■ 33 Users / 35 Sessions 4. South Korea : ■■■ 31 Users / 38 Sessions 5. France : ■■■ 28 Users / 33 Sessions 6. Iran : ■ 7 Users / 8 Sessions 7. Mexico : ■ 7 Users / 7 Sessions 8. Spain : ■ 7 Users / 7 Sessions ========================================================================================
```

■ Prioritized Strategic Action Matrix (Music Separation iOS)

Priority	Track	Issue Identified	Actionable Recommendation
P0	**Engineering**	UI Slider Telemetry Flood	Debounce slider analytics (`player_pitch_changed`, `player_tempo_changed`, `player_stem_balance_changed`). Dispatch telemetry events **only on `TouchUpInside` / `EditingDidEnd`**.
P0	**Product**	Build 1.3.09 Low Engagement	Audit onboarding in build `1.3.09`. Ensure Japanese localization is properly formatted and fix any non-responsive UI components blocking primary player playback.
P1	**Monetization**	Single Monetization Channel	Implement **Consumable Minute Packs** (e.g., 60-Minute / 300-Minute Processing Credit Packs) alongside weekly/monthly subscriptions to monetize casual users.
P1	**Growth**	Low Returning User Cohort (5.1%)	Implement push notifications for completed stem separations and run automated re-engagement workflows to improve D1–D7 retention.
P2	**Localization**	High Concentration in Japan	Customize paywall pricing for Japan (`mss_monthly_sub` at ¥980/mo) and add native Japanese onboarding tutorials.

---

3. Application Deep-Dive: Vocal Cleaner

App Header & Health Score

- **App Name**: Vocal Cleaner (`com.neuralSound.audiocleaner`)
- **GA4 Stream ID**: `15407667671`
- **Overall Health Score**: **1.5 / 10**
- **Score Rationale**: The app is functionally dead in production. It generated **0 active users yesterday**, only 2 active users over the past 7 days, and 13 lifetime users. While technically crash-free (100%), it lacks active distribution, marketing support, and ongoing user acquisition.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (30-Day Window)

Product ID	Product Name	Plan Type	Units Sold (30D)	Revenue ($ USD)	% Share of Sales
`cleaner_monthly_sub`	Monthly	Monthly Auto-Renew	1	$8.99	100.00%
Total Product Sales	—	—	**1**	**$8.99**	**100.00%**

Transaction Timeline Log Table

Timestamp (Date)	App Build	Product ID	SKU Localized Name	Country	Units	Revenue ($ USD)
2026-08-22	`1.0.01`	`cleaner_monthly_sub`	Monthly	United States	1	$8.99

Build Environment & Monetization Analysis

- **Monetization Infrastructure**: The app uses a single monthly subscription SKU (`cleaner_monthly_sub` at $8.99/month).
- **Consumable Minutes Availability**: No consumable minute packs exist.
- **Conversion Breakdown**: The app recorded a single subscription conversion on 2026-08-22 in the US, but has generated no further transaction activity since.

■ Multi-Horizon Growth & Historical Scale Comparison

Time Horizon	Active Users	New Users	Total Sessions	Engagement Rate	Revenue ($ USD)	ARPPU ($)
Yesterday	0	0	0	0.0%	$0.00	$0.00

Past 365 Days	13	12	13	38.5%	$8.99	$8.99
Lifetime All-Time	13	12	13	38.5%	$8.99	$8.99

■ Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Total Sessions	Avg Session Duration	Engagement Rate	Screen Page Views
New Users (30D)	12 (92.3%)	12	0.0 sec	38.5%	0
Returning Users	1 (7.7%)	1	0.0 sec	0.0%	0

■ 7-Day Velocity & Trajectory

Date	Active Users	New Users	Total Sessions	Engagement Rate	Commentary

2026-08-30 to 09-03	0	0	0	0.0%	Zero traffic recorded
2026-09-04	2	2	2	50.0%	Isolated organic ping
2026-09-05	0	0	0	0.0%	Zero traffic recorded

■ User Funnel Diagrams

```
======================================================================================== ACQUISITION & MONETIZATION FUNNEL (DORMANT PRODUCT) ======================================================================================== [App Store Impression] : Unknown Source ■ ▼ [App Downloads / Installs]: 13 Users (30D) ■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■ ■ ▼ [Yesterday Active Users] : 0 Users (0.0%) ■ ▼ [Active Subscriptions] : 1 User (7.7%) ■
```

■■ Crash & Stability Health by App Version

App Version	Active Users (30D)	Sessions	Engagement Rate	Crash-Free User Rate	Status
1.0.01	13	13	38.5%	**100.0%**	Active Legacy Production

■ New Build / TestFlight / Staged Rollout Alert Section

```
[ALERT SYSTEM: PRODUCT STAGNATATION / DEPRECATION NOTICE] ---------------------------------------------------------------------------------------- App Name : Vocal Cleaner (com.neuralSound.audiocleaner) Current Version: 1.0.01 Build Status : No new builds submitted in >180 Days. RECOMMENDATION: This application is dormant with zero active daily acquisition. Evaluate whether to sunset the app or merge its core noise-reduction engine into Music Separation iOS.
```

■ Top In-App Events & Feature Telemetry

- **Telemetry Log**: Zero custom event telemetry was recorded during the current observation period due to inactive app usage.
- **Instrumentation Assessment**: GA4 SDK event tracking is either uninitialized, crashing on launch before dispatching events, or missing custom event hooks entirely in build `1.0.01`.

■■ Geographic Distribution

- **Active Geography (30D)**: United States (1 conversion / active user).
- **Rest of World**: Zero recorded traffic.

■ Prioritized Strategic Action Matrix (Vocal Cleaner)

Priority	Track	Issue Identified	Actionable Recommendation

P0	**Executive Strategy**	Stagnant Portfolio App	**Decision Gate**: Evaluate sunsetting Vocal Cleaner as a standalone app and reallocating resources to Music Separation iOS.
P0	**Product Strategy**	Feature Integration	Integrate Vocal Cleaner's vocal cleaning and denoiser DSP algorithm directly into Music Separation iOS as an **"Advanced Vocal Clean"** feature.
P1	**Growth / ASO**	Zero Acquisition	If keeping standalone, update ASO metadata, target long-tail keywords ("vocal denoiser", "audio cleaner"), and fix GA4 event tracking instrumentation.
P2	**Monetization**	Rigid Paywall	Replace the $8.99/mo subscription with an ad-supported model that offers **Consumable Audio Processing Credits**.
