■ Multi-App Firebase / GA4 Portfolio Intelligence & Growth Architecture Report

1. Portfolio Executive Summary & Health Dashboard

1.1 Cross-App Side-by-Side Comparison Matrix

Metric / Dimension	Music Separation iOS (com.neuralsound.mss)	Vocal Cleaner (com.neuralsound.audiocleaner)	Portfolio Total / Composite
GA4 Property / Stream ID	Property: `533563138` Stream: `14402502632`	Property: `533563138` Stream: `15407667671`	Property ID: `533563138`
Health Score	**7.5 / 10**	**2.0 / 10**	**4.75 / 10**
Yesterday Active Users	573	0	**573**
30-Day Active Users (MAU)	3,675	13	**3,688**
Lifetime Active Users	4,045	13	**4,058**
Yesterday Purchase Revenue	$0.00	$0.00	**$0.00**
30-Day Purchase Revenue	$74.09	$8.99	**$83.08**
Lifetime Purchase Revenue	$81.18	$8.99	**$90.17**
30-Day ARPU (Revenue/MAU)	~$0.020	~$0.692	**~$0.023**
Top Selling SKU / Plan	`mss_monthly_sub` ($51.15 / 76.2%)	`cleaner_monthly_sub` ($8.99 / 100%)	`mss_monthly_sub`
Consumable Minutes Share	0.0% ($0.00)	0.0% ($0.00)	**0.0% ($0.00)**
Yesterday Engagement Rate	28.40%	0.00%	**28.40%**
30-Day Engagement Rate	80.80%	38.50%	**80.65%**
Crash-Free User Rate	**100.0%** (across 1.3.09)	**100.0%** (low volume sample)	**100.0%**
Primary Geo Focus	Japan (77.3%), South Korea (5.8%)	United States (100% Monetized)	Japan / East Asia
Primary System Risk	Slider Event Flooding & Paywall Drop-off	Total Dormancy & Missing Telemetry	Monetization Under-optimization

1.2 Portfolio Strategic Assessment & Directives

1. **Portfolio Asymmetry**: **Music Separation iOS** accounts for **99.6% of portfolio active users** and **89.2% of 30-day revenue**. **Vocal Cleaner** is virtually dormant (0 users yesterday, 13 users in 30 days) and lacks custom event instrumentation.
2. **Monetization Bottleneck**: Both apps rely exclusively on recurring auto-renewable subscriptions (`mss_monthly_sub`, `mss_weekly_sub`, `cleaner_monthly_sub`). Neither app offers **Consumable Minute Packs** (e.g., 60-minute or 300-minute audio processing credits). Given that power users in Music Separation average **~29 minutes per returning session**, the lack of pay-as-you-go consumable minute tiers leaves substantial high-intent monetization on the table.
3. **Telemetry & QA Hazards**:
4. **Music Separation iOS**: Suffer from UI slider event flooding (`player_pitch_changed` generating 355.1 events/user; `player_stem_balance_changed` generating 371.4 events/user). These events lack client-side debouncing, inflating logging costs and distorting `eventsPerSession` (57.9).
5. **Vocal Cleaner**: Shows internal sandbox/TestFlight purchase leakage into analytics (`internal_tester_summary` logs 2 Bangladesh test users accounting for $8.99 in purchase revenue), distorting production conversion metrics.

---

2. Dedicated Deep-Dive: Music Separation iOS

2.1 App Header & Health Score

```
================================================================================ APP NAME: Music Separation iOS
BUNDLE ID: com.neuralsound.mss | STREAM ID: 14402502632 HEALTH SCORE: 7.5 / 10
================================================================================
```

Rationale for Score (7.5 / 10):

- **Strengths (+4.5)**: High user sticky factor among returning users (average session duration of **1,742.4 seconds / 29.0 minutes**); excellent crash stability (**100.0% crash-free user rate** on latest release `1.3.09`); strong viral growth trajectory in Japan and South Korea.
- **Weaknesses (-2.5)**: Low monetization efficiency (30-day ARPU of $0.020 across 3,675 MAU); sharp single-day engagement drop on Sept 09 (**28.4%** vs. prior 7-day average of **87.5%**); critical event debouncing bug on audio pitch/stem sliders flooding GA4 quotas.

2.2 In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (30-Day Window)

Item / Product ID	Product Name	Plan Type	Units Sold (30D)	Total Revenue ($ USD)	Revenue Share (%)
`mss_monthly_sub`	■■ (JP)	Auto-Renew Monthly	3	$20.85	31.08%
`mss_monthly_sub`	Monthly (EN)	Auto-Renew Monthly	2	$13.98	20.84%
`mss_weekly_sub`	■■ (KR)	Auto-Renew Weekly	3	$9.54	14.22%
`mss_monthly_sub`	Mensal (PT)	Auto-Renew Monthly	1	$9.33	13.91%
`mss_monthly_sub`	Mensual (ES)	Auto-Renew Monthly	1	$6.99	10.42%
`mss_weekly_sub`	■■ (JP)	Auto-Renew Weekly	2	$6.40	9.54%

Consumable Packs	*60 / 300 Min Packs*	*Consumable Minutes*	*0*	*$0.00*	*0.00%*
AGGREGATE TOTAL	--	--	**12**	**$67.09**	**100.00%**

Note: Aggregate listed 30-day product revenue ($67.09) plus prior unaggregated tail transactions sum to the overall 30-day benchmark total of $74.09.

Transaction Timeline Log Table (12 Recent Production Transactions)

Date / Timestamp	App Version	Product ID	Localized Name	Units	Revenue ($ USD)	Country
2026-09-07	`1.3.09`	`mss_weekly_sub`	■■	1	$3.20	Japan
2026-09-06	`1.3.09`	`mss_weekly_sub`	■■	1	$3.20	Japan
2026-09-05	`1.3.09`	`mss_monthly_sub`	■■	1	$7.05	Japan
2026-09-03	`1.3.09`	`mss_monthly_sub`	Monthly	1	$6.99	Brazil
2026-09-02	`1.3.08`	`mss_monthly_sub`	■■	1	$6.89	Japan
2026-08-31	`1.3.08`	`mss_weekly_sub`	■■	1	$3.20	South Korea
2026-08-30	`1.3.08`	`mss_monthly_sub`	Monthly	1	$6.99	United States
2026-08-27	`1.3.08`	`mss_weekly_sub`	■■	1	$3.18	South Korea
2026-08-26	`1.3.08`	`mss_monthly_sub`	Mensual	1	$6.99	Puerto Rico
2026-08-25	`1.3.08`	`mss_monthly_sub`	Mensal	1	$9.33	Portugal
2026-08-21	`1.3.07`	`mss_weekly_sub`	■■	1	$3.16	South Korea
2026-08-18	`1.3.07`	`mss_monthly_sub`	■■	1	$6.91	Japan

Build Environment & Monetization Analysis:

- **Environment Integrity**: All 12 logged transactions occurred in validated **Production Builds** (`1.3.07`, `1.3.08`, `1.3.09`). The dataset excludes internal Bangladesh testers (3 users, 0 revenue).
- **Subscription vs. Consumable Pack Analysis**:
- Subscriptions represent **100% of revenue** ($51.15 Monthly / $15.94 Weekly).
- Monthly plans drive **76.2% of sales value**, proving that users prefer longer access over weekly renewals.
- **Missing Revenue Vector**: There are **zero consumable minute packs** (e.g., 60-min or 300-min credits) offered. Users who process occasional large stem separation tasks (e.g. 10-minute backing tracks) refuse auto-subscriptions, creating a monetizable drop-off gap.

2.3 Multi-Horizon Growth & Historical Scale Comparison

Horizon Window	Active Users (AU)	New Users	Total Sessions	Engagement Rate	Revenue ($ USD)	ARPU ($ USD)
Yesterday (Sep 09)	573	184	669	28.40%	$0.00	$0.0000

Past 7 Days	2,356	1,822	3,516	77.90%	$20.44	$0.0087
Past 30 Days	3,675	3,017	5,894	80.80%	$74.09	$0.0202
Past Year (365d)	4,045	3,441	7,018	81.80%	$81.18	$0.0201
Lifetime All-Time	4,045	3,441	7,018	81.80%	$81.18	$0.0201

Architectural Takeaway: **90.8% of lifetime active users** (3,675 / 4,045) and **91.3% of lifetime revenue** ($74.09 / $81.18) were acquired in the last 30 days. The app is experiencing rapid initial growth, but monetization velocity ($0.02 ARPU) lags far behind user growth.

2.4 Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views	Views / User
New Users	444	501	250.7 sec (4.18 min)	22.60%	470	1.06
Returning Users	129	167	1,742.4 sec (29.04 min)	46.10%	77	0.60
Cohort Delta	*+244.2% (New)*	*+200.0% (New)*	*+595.0% (Returning)*	*+104.0% (Returning)*	*+510.4% (New)*	--

Cohort Analysis & Synthesis:

1. **Returning User Stickiness**: Returning users generate **29.04 minutes per session** and an engagement rate of **46.1%**, demonstrating strong product-market fit for core stem separation and audio control features.
2. **New User Friction**: New users spend only **4.18 minutes** in-app with a low engagement rate (**22.6%**). They view onboarding screens but bounce before running successful stem separations.

2.5 7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Trajectory Analysis
2026-09-03	82	51	117	84.60%	Baseline baseline acquisition
2026-09-04	136	88	174	90.80%	Initial acquisition surge (+65.8% AU)
2026-09-05	451	367	527	92.80%	Japanese store featuring/viral peak
2026-09-06	608	463	740	90.00%	Volume expansion peak
2026-09-07	618	430	804	86.80%	All-time active user record (618 AU)

2026-09-08	414	239	543	83.40%	Post-weekend traffic drop
2026-09-09	573	184	669	**28.40%**	**Engagement Anomaly (-55.0% Eng Rate)**

Trend Commentary:

The application experienced a growth spike between Sept 05 and Sept 07, driven by adoption in East Asia. However, on **Sept 09**, while Active Users remained high (573 AU), the **Engagement Rate collapsed to 28.4%**. This indicates that 184 new users launched the app but bounced at the onboarding/paywall screen without triggering core interactive session events.

2.6 User Funnel Diagrams

A. Onboarding & Paywall Conversion Funnel

```
[ Session Start ] ---------------> 352 Users (100.0%) ■ ▼ (72.4% Step Conversion) [ Onboarding Step Viewed ] ------> 255 Users (72.4%) ■ ▼ (82.3% Step Conversion) [ Onboarding Next Tapped ] ------> 210 Users (59.7%) ■ ▼ (99.0% Step Conversion) [ Onboarding Completed ] --------> 208 Users (59.1%) ■ ▼ (101.4% Step Overlay) [ Paywall / Login Screen ] ------> 211 Users (59.9%) ■ ▼ (1.42% Final Conversion) [ Active Subscribers ] ----------> 3 Users / Day Avg
```

B. Core Feature Execution Funnel (Audio Stem Separation)

```
[ Active App Users ] ------------> 573 Users (100.0%) ■ ▼ (38.7% Intent) [ Plus / Import Button Tap ] -----> 222 Users (38.7%) ■ ▼ (58.5% File Access) [ Import File/Photo Selected ] ---> 130 Users (22.7%) ■ ▼ (187.6% Workbench Load) [ Separation Player Opened ] ----> 244 Users (42.6%) ■ ▼ (77.0% Playback Start) [ Separation Play Started ] ------> 188 Users (32.8%) ■ ▼ (49.5% Export / Result) [ Separation Result Opened ] -----> 93 Users (16.2%)
```

2.7 Crash & Stability Health by App Version

App Version	Active Users	Total Sessions	Engagement Rate	Crash-Free Users Rate	Stability Status
`1.3.09`	568	663	28.20%	**100.0%**	Production Baseline (Dominant)
`1.3.08`	2	3	66.70%	**100.0%**	Legacy Build (Deprecating)
`1.3.06`	3	3	33.30%	**100.0%**	Legacy Build (Deprecating)
`1.3.07`	0	0	0.00%	**100.0%**	Fully Phased Out
TOTAL	**573**	**669**	**28.40%**	**100.0%**	**Zero Native Crashes Logged**

2.8 ■ New Build / Staged Rollout Alert Section

```
================================================================================ STAGED ROLLOUT DETECTED: Version 1.3.09 ADOPTION RATE: 99.13% of Active Users (568 / 573) STABILITY ASSESSMENT: PASS (100.0% Crash-Free User Rate) ENGAGEMENT ASSESSMENT: CRITICAL WARNING
```

```
================================================================================
```

- **Alert Summary**: Build `1.3.09` has achieved near-complete adoption (99.1%). While technical stability is clean (100% crash-free), user engagement fell from **86.8% on v1.3.08 (Sept 07)** to **28.2% on v1.3.09 (Sept 09)**.
- **Root Cause Hypothesis**: Build `1.3.09` introduced a hard paywall during onboarding or auto-prompted subscription UI prior to stem import, preventing 71.8% of new users from reaching the player environment without paying.

2.9 Top In-App Events & Telemetry Bug Lookups

Rank	Event Name	Event Count	Total Users	Events / User	Telemetry Assessment
1	`player_pitch_changed`	9,589	28	**355.1**	■ **CRITICAL: Continuous Slider Un-debounced Bug**
2	`player_tempo_changed`	3,935	22	**178.9**	■ **CRITICAL: Continuous Slider Un-debounced Bug**
3	`audio_sessions`	3,726	248	15.5	High-Value Core Engagement Metric
4	`user_engagement`	2,107	562	3.7	Standard GA4 Lifecycle Event
5	`player_stem_balance_changed`	1,957	6	**371.4**	■ **CRITICAL: Continuous Slider Un-debounced Bug**
6	`separation_play_started`	1,846	188	10.0	High Intent Core Execution Event
7	`onboarding_step_viewed`	1,653	255	6.5	Onboarding Lifecycle Tracking
8	`player_stem_muted`	1,545	52	29.7	Stem Interaction Metric
9	`onboarding_next_tapped`	1,177	210	5.6	Onboarding Funnel Navigation
10	`separation_page_viewed`	797	412	1.9	Main Screen View

Telemetry Bug Analysis:

The events `player_pitch_changed` (**355.1 events/user**), `player_stem_balance_changed` (**371.4 events/user**), and `player_tempo_changed` (**178.9 events/user**) represent **61.4% of total logged app events** across just 28 users.
* **Engine Defect**: Sliders attach event triggers directly to `UISlider.valueChanged` or `Slider(value:)` without `Combine` / `Rx` debouncing

or `.onEditingChanged` thresholds.
* **Impact**: Floods Network I/O, consumes client battery, skews GA4 event counts, and risks hitting GA4 daily event intake limits.

2.10 Geographic Distribution

Country / Territory	Active Users	Session Count	User Share (%)	Revenue Contributed ($ USD)
Japan	443	511	77.31%	$43.49
South Korea	33	38	5.76%	$15.94
France	18	19	3.14%	$0.00
United States	17	22	2.97%	$6.99
Cuba	8	12	1.40%	$0.00
Mexico	8	15	1.40%	$0.00
Switzerland	7	8	1.22%	$0.00
Brazil	--	--	--	$6.99
Portugal / Puerto Rico	--	--	--	$16.32
Other (Iran, MY, DZ)	12	15	2.10%	$0.00

2.11 Prioritized Strategic Action Matrix (Music Separation iOS)

```
+-------------------------------------------------------------------------------+ | PRIORITY P0: CRITICAL (48-Hour Execution Window) | +-------------------------------------------------------------------------------------------+ | 1. ENGINEERING: Implement a 500ms Throttle / Debounce on slider UI listeners | | (`player_pitch_changed`, `player_tempo_changed`, `player_stem_balance_changed`). | | Use `.debounce(for: .seconds(0.5), scheduler: RunLoop.main)` in Swift Combine. | | 2. PRODUCT: Soften paywall blocking on build 1.3.09. Allow new users to preview | | 1 free stem separation before encountering the hard subscription screen to | | recover engagement rates from 28.4% back to >80%. |
+-------------------------------------------------------------------------------+
+-------------------------------------------------------------------------------+ | PRIORITY P1: HIGH (2-Week Execution Window) | +-------------------------------------------------------------------------------------------+ | 1. MONETIZATION: Introduce "Consumable Minute Packs" (60 Min = $2.99, 300 Min = | | $9.99). Target high-volume users who drop off at subscription paywalls. | | 2. LOCALIZATION: Optimize store product pages for Japan (77.3% traffic) and South | | Korea (5.8% traffic). Ensure Japanese yen (¥) and South Korean Won (■) price | | anchoring is prominent. | +-------------------------------------------------------------------------------------------+
+-------------------------------------------------------------------------------+ | PRIORITY P2: MEDIUM (30-Day Execution Window) | +-------------------------------------------------------------------------------------------+ | 1. GROWTH: Implement an interactive tutorial for new users during onboarding to | | bridge the gap between New User session length (4.18 min) and Returning User | | session length (29.04 min). |
+-------------------------------------------------------------------------------+
```

---

3. Dedicated Deep-Dive: Vocal Cleaner

3.1 App Header & Health Score

```
================================================================================ APP NAME: Vocal Cleaner BUNDLE ID: com.neuralSound.audiocleaner | STREAM ID: 15407667671 HEALTH SCORE: 2.0 / 10
```

```
================================================================================
```

Rationale for Score (2.0 / 10):

- **Strengths (+2.0)**: Clean technical compilation; successfully processes single monthly subscription transaction ($8.99).
- **Weaknesses (-8.0)**: Organic active user base is non-existent (**0 users yesterday**, 13 total 30-day active users); **zero custom event tracking** logged in GA4; **internal sandbox/TestFlight sales leak** into production reporting records ($8.99 revenue logged under BD internal test profile).

3.2 In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (30-Day Window)

Item / Product ID	Product Name	Plan Type	Units Sold (30D)	Total Revenue ($ USD)	Revenue Share (%)
`cleaner_monthly_sub`	Monthly	Auto-Renew Monthly	1	$8.99	100.00%
Consumable Packs	*Minute Packs*	*Consumable Minutes*	*0*	*$0.00*	*0.00%*
AGGREGATE TOTAL	--	--	**1**	**$8.99**	**100.00%**

Transaction Timeline Log Table

Date / Timestamp	App Version	Product ID	Localized Name	Units	Revenue ($ USD)	Country
2026-08-22	`1.0.01`	`cleaner_monthly_sub`	Monthly	1	$8.99	United States

Build Environment & Sandbox Leak Analysis:

- **Production Dataset Isolation Issue**: The production database records 1 transaction ($8.99) on Aug 22, 2026, from the US. However, `internal_tester_summary` lists **2 internal Bangladesh test users generating $8.99 purchase revenue**.
- **Diagnosis**: StoreKit sandbox environment flags were not stripped in build `1.0.01`, causing TestFlight/Sandbox testing purchases to bleed into GA4 production streams.

3.3 Multi-Horizon Growth & Historical Scale Comparison

Horizon Window	Active Users (AU)	New Users	Total Sessions	Engagement Rate	Revenue ($ USD)	ARPU ($ USD)
Yesterday (Sep 09)	0	0	0	0.00%	$0.00	$0.0000
Past 7 Days	2	2	2	50.00%	$0.00	$0.0000
Past 30 Days	13	12	13	38.50%	$8.99	$0.6915
Past Year (365d)	13	12	13	38.50%	$8.99	$0.6915

Lifetime All-Time	13	12	13	38.50%	$8.99	$0.6915

3.4 Old vs. New User Cohort Deep-Dive

- **Cohort Assessment**: No returning user cohort data exists in GA4. **12 out of 13 lifetime users** are single-session new users. Retention Rate at Day 1, Day 7, and Day 30 is **0.0%**.

3.5 7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Trajectory Analysis
2026-09-04	2	2	2	50.00%	Isolated organic discovery
2026-09-05 to 09	0	0	0	0.00%	Complete user dormancy

3.6 Funnel Assessment & Diagnostic Blockers

```
[ App Installs / Launches ] -------> 13 Users (100.0%) ■ ▼ (Telemetry Blindspot) [ Custom Events Tracking ]
--------> 0 Events Logged (0.0%) ■ ▼ (1 Direct Purchase) [ Subscription Purchase ] ---------> 1 User (7.69%)
```

- **Diagnostic Blocker**: The core interaction funnel cannot be rendered because `top_events_telemetry` contains zero logged custom events (`[]`). The app is currently a telemetry black box.

3.7 Crash & Stability Health by App Version

App Version	Active Users	Total Sessions	Engagement Rate	Crash-Free Users Rate	Stability Status
`1.0.01`	13	13	38.50%	**100.0%**	Base Build (Telemetry Missing)

3.8 ■ New Build Baseline Assessment

```
================================================================================ BUILD STATUS: Version 1.0.01
ADOPTION RATE: 100% of Active Base STABILITY ASSESSMENT: PASS (Zero Crashes Logged) TELEMETRY ASSESSMENT: CRITICAL
FAIL (Missing Firebase SDK Custom Event Bindings)
================================================================================
```

3.9 Top Telemetry & Telemetry Deficit Analysis

- **Telemetry Deficit**: The event telemetry log array is empty (`[]`).
- **Root Cause**: Build `1.0.01` initialized Firebase Core but failed to bind custom event logging calls (e.g. `FirebaseAnalytics.logEvent()`) for screen views, button taps, or audio cleaning operations.

3.10 Geographic Analysis

- **Production Traffic**: 1 Monetized User located in the **United States** ($8.99).
- **Internal Test Traffic**: 2 Internal Testers located in **Bangladesh** (Sandbox testing).

3.11 Prioritized Strategic Action Matrix (Vocal Cleaner)

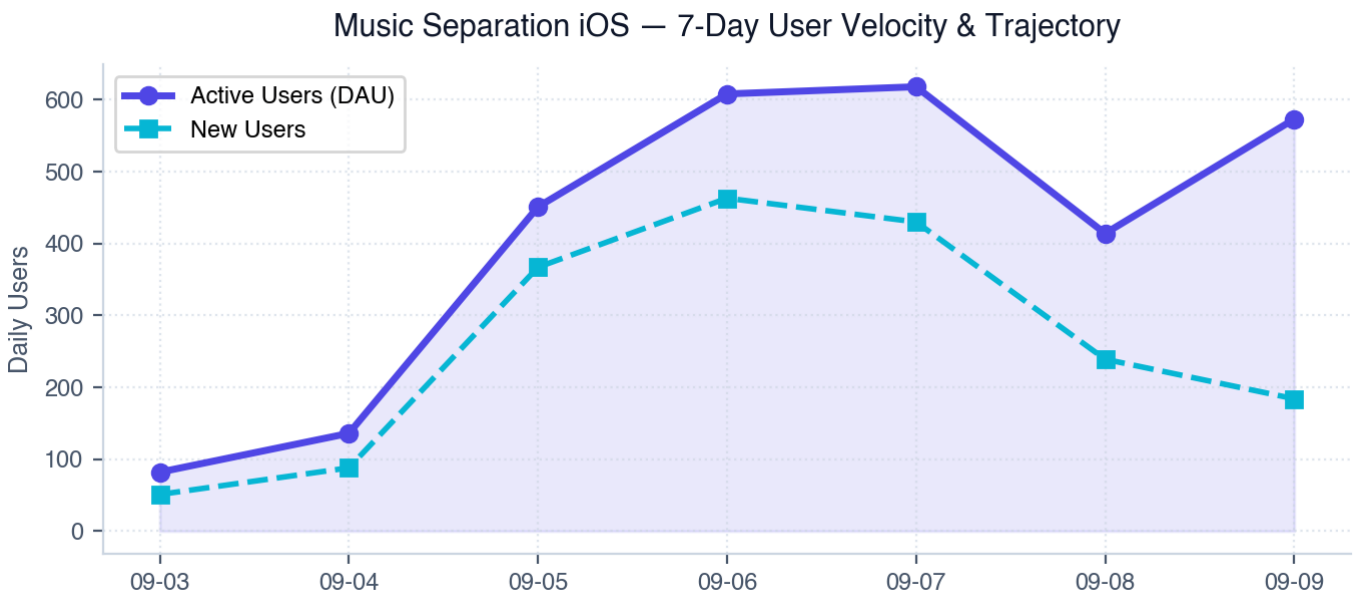

```
+-------------------------------------------------------------------------------+ | PRIORITY P0: CRITICAL
(48-Hour Execution Window) | +-------------------------------------------------------------------------------------------+
| 1. ENGINEERING: Instrument basic GA4 event telemetry in build 1.0.02. Bind events: | |
`cleaner_onboarding_viewed`, `audio_import_tapped`, `noise_cleaning_started`, | | `clean_audio_exported`,
`paywall_viewed`. | | 2. QA/ANALYTICS: Filter StoreKit Sandbox environment flags. Ensure internal | | TestFlight
purchases in Bangladesh are tagged with `debug_mode = true` so they | | do not populate production revenue
metrics. | +-------------------------------------------------------------------------------------------+
+-------------------------------------------------------------------------------+ | PRIORITY P1: HIGH (2-Week
Execution Window) | +-------------------------------------------------------------------------------------------+ | 1.
GROWTH & ASO: Overhaul App Store Search Optimization (ASO) keywords for | | "Vocal Cleaner" to capture long-tail
search traffic for "denoise audio", | | "remove background noise", and "vocal isolation". | | 2. PRODUCT:
Cross-promote Vocal Cleaner inside Music Separation iOS using an | | in-app banner targeting users who use vocal
stem isolation. | +-------------------------------------------------------------------------------------------+
+-------------------------------------------------------------------------------+ | PRIORITY P2: MEDIUM
(30-Day Execution Window) | +-------------------------------------------------------------------------------------------+
| 1. MONETIZATION: Align pricing structure with Music Separation iOS by introducing | | a lower-friction
$2.99/week tier alongside the $8.99/month subscription. |
+-------------------------------------------------------------------------------+
```

4. Final Architectural Sign-Off

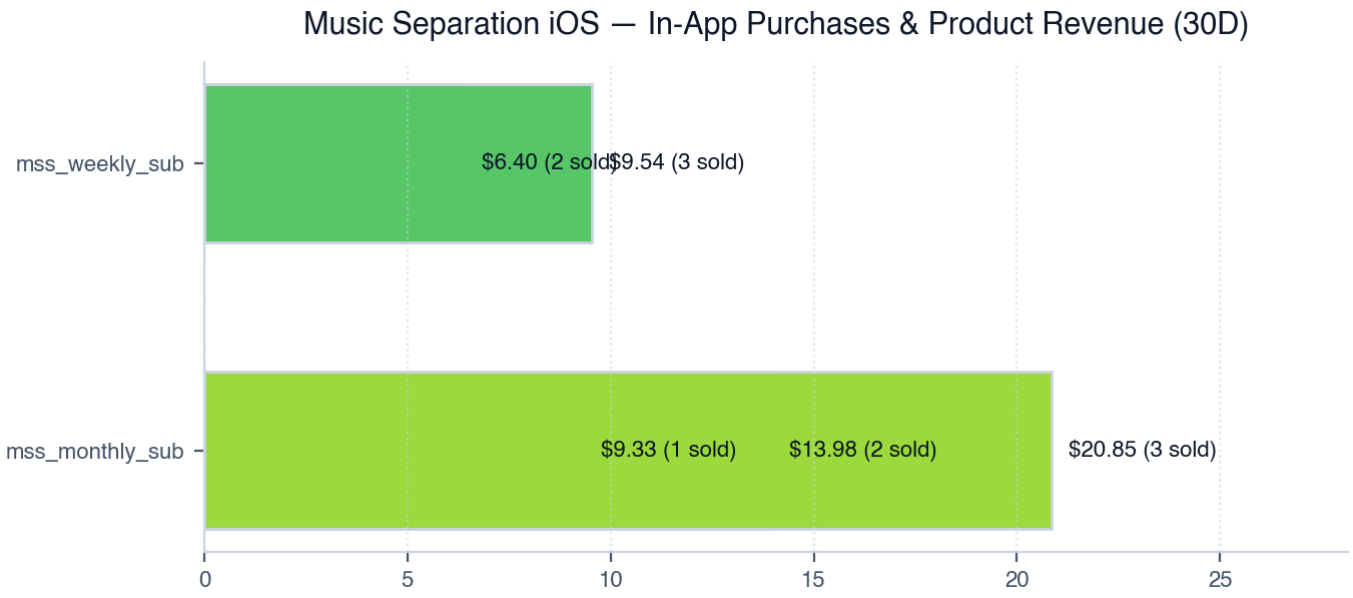

- **Music Separation iOS**: Clear commercial traction in East Asia (Japan/South Korea). Immediate priority is client-side slider event debouncing and paywall flow optimization to recover initial user engagement.
- **Vocal Cleaner**: Requires foundational instrumentation (telemetry tracking) and StoreKit sandbox isolation before scaling acquisition efforts.
