```

The Neural Sound mobile portfolio exhibits an extreme structural divergence:
1. **`Music Separation iOS`** represents 92.4% of total commercial value ($77.38 / 30D) and 99.7% of monthly active users. While stability is perfect (100% crash-free), the app suffers from **extreme telemetry inflation** (slider UI bugs logging thousands of events per user), a **steep drop-off in user acquisition velocity** over the past 7 days, and an unoptimized paywall structure that lacks high-margin consumable minute packs.
2. **`Vocal Cleaner`** is currently a dormant asset generating zero daily active traffic (0 AU yesterday). Its 30-day production footprint consists of a single auto-renewed US subscription ($8.99) against 13 total sessions. Internal QA sandbox revenue ($24.97) exceeds production revenue by 277%, indicating active dev churn without live user distribution.

---

2. Dedicated Deep-Dive: Music Separation iOS

App Header & Health Score

- **App Name:** Music Separation iOS
- **Bundle ID:** `com.neuralsound.mss` | **GA4 Stream ID:** `14402502632`
- **Health Score: 6.2 / 10**
- **Rationale:** Exceptional product-market fit in East Asian markets (Japan/South Korea generate >78% of active sessions), robust long-session engagement among returning power users (34.4 minutes/session), and absolute stability (100% crash-free). However, the score is penalized due to:
- A sharp 7-day acquisition collapse (New Users dropped from 463/day on Sep 6 to 72/day on Sep 11).
- Telemetry code defects (pitch/tempo UI sliders firing >200 events/user due to missing debouncing).
- Total absence of consumable processing minute monetization (60m/300m packs).
- Low onboarding-to-import funnel conversion (~39.1% mode execution rate).

■ In-App Purchases, Subscriptions & Consumable Breakdown

Product Sales Summary Table (Past 30 Days)

Item / Product ID	Localized Product Name	Plan Type	Localized Market	Units Sold (30D)	Total Revenue ($ USD)	% Share (SKU Rev)
`mss_weekly_sub`	■■	Weekly Subscription	South Korea	4	$12.83	18.23%
`mss_monthly_sub`	■■	Monthly Subscription	Japan	3	$20.85	29.62%
`mss_monthly_sub`	Monthly	Monthly Subscription	Global (US/BR)	2	$13.98	19.86%
`mss_weekly_sub`	■■	Weekly Subscription	Japan	2	$6.40	9.09%
`mss_monthly_sub`	Mensal	Monthly Subscription	Portugal	1	$9.33	13.26%
`mss_monthly_sub`	Mensual	Monthly Subscription	Puerto Rico	1	$6.99	9.93%

Total SKU Identified	—	—	—	**13**	**$70.38**	**100.00%**

Note: GA4 multi-horizon benchmark reports total 30-day production revenue of $77.38. The $7.00 differential represents unmapped store renewals or real-time currency exchange adjustments.

Aggregated SKU Type Summary

```

2026-08-25	`1.3.08`	`mss_monthly_sub`	Mensal	1	$9.33	Portugal
2026-08-21	`1.3.07`	`mss_weekly_sub`	■■	1	$3.16	South Korea
2026-08-18	`1.3.07`	`mss_monthly_sub`	■■	1	$6.91	Japan

Build Environment & Monetization Analysis

1. **Production vs. QA TestFlight Isolation:**
2. Production transactions are spread across builds `1.3.07`, `1.3.08`, and `1.3.09`.
3. Internal QA / QA Sandbox activity in Bangladesh produced **$40.89 in sandbox test purchases** (14 active users, 17 sessions). Sandbox test transactions represent **52.8% of production revenue**, indicating heavy TestFlight IAP sandbox verification before

releasing build `1.3.09`.

4. **Subscriptions vs. Consumables Dynamics:**
5. Monetization relies entirely on recurring subscriptions ($77.38).
6. **Growth Deficit:** AI audio processing workloads (stem isolation, 6-stem AI separation) are naturally usage-based. The complete lack of consumable minute SKUs (e.g., $2.99 for 60 mins / $9.99 for 300 mins) locks out casual/one-time users who refuse auto-renewing subscriptions, leading to zero monetization of the 73.0% yesterday bounce cohort.

■ Multi-Horizon Growth & Historical Scale Comparison

Time Horizon	Active Users (AU)	New Users	Sessions	Engagement Rate	Total Purchase Rev ($ USD)	ARPU ($ USD)
Yesterday	287	72	337	27.00%	$3.29	$0.011
Past 7 Days	2,406	1,929	3,788	82.20%	$16.74	$0.007
Past 30 Days	3,770	3,172	6,254	83.40%	$77.38	$0.021
Past Year (365d)	4,223	3,687	7,521	84.60%	$84.47	$0.020
All-Time	4,223	3,687	7,521	84.60%	$84.47	$0.020

Analytical Commentary: The app reached its lifetime scale within the last 30 days (3,770 AU out of 4,223 lifetime AU = 89.3% of total lifetime scale occurred in the past month). However, 7-day monetization velocity ($16.74) is lagging user accumulation, generating a low overall ARPU of ~$0.02.

■ Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views	Views / User
New Users	183	202	360.7 sec (6.01 min)	25.20%	218	1.19
Returning Users	104	135	**2,066.4 sec (34.44 min)**	**29.60%**	58	0.56
Cohort Differential	+76.0% (New)	+49.6% (New)	**+472.9% (Returning)**	+17.5% (Returning)	+275.9% (New)	+112.5% (New)

Cohort Insights:
* **Power-User Retention:** Returning users spend an average of **34.4 minutes per session**, confirming deep engagement with player features (pitch tuning, stem muting, tempo changes).
* **Onboarding Friction:** New users spend only 6 minutes and exhibit a 25.2% engagement rate, indicating that 74.8% bounce or abandon the app during initial onboarding or file import setup.

■ 7-Day Velocity & Trajectory

Date	Active Users	New Users	Total Sessions	Engagement Rate	Trajectory State
2026-09-05	451	367	527	92.80%	Peak Scale / Strong UA

2026-09-06	608	463	738	90.00%	All-Time Traffic Spike
2026-09-07	619	431	801	86.50%	High Engagement Volume
2026-09-08	418	240	527	86.10%	UA Decay Step-down
2026-09-09	414	226	512	83.20%	Steady Decay
2026-09-10	285	130	353	78.20%	Significant Downturn
2026-09-11	287	72	337	**27.00%**	**Severe Compression Cliff**

```
7-DAY ACTIVE USER & NEW USER TRAJECTORY 650
█████████████████████████████████████████████████████████████████████ ■ [619 AU] 520
████████████████████████[608 AU]█████████████████████████████████████ ■ [451 AU] ■ ■ [418 AU]

█████████████████████████████████████████████████████████████████████████████ ■ [367 New]
[463 New] [431 New] [240 New][226 New][130 New][72 New] 130
█████████████████████████████████████████████████████████████████████████████ 0
█████████████████████████████████████████████████████████████████████████████ 09-05 09-06
09-07 09-08 09-09 09-10 09-11
```

Trend Commentary: Between Sept 7 and Sept 11, daily active users dropped **53.6%** (from 619 to 287), and new user acquisition dropped **83.3%** (from 463 to 72). Simultaneously, engagement rate crashed from 86.5% to 27.0% on Sept 11. This indicates an abrupt user acquisition channel pause, coupled with traffic degradation following the release of build `1.3.09`.

■ User Funnel Diagrams

Onboarding Experience Funnel

```
[128 Users] onboarding_viewed (100.0%) ■ ▼ [131 Users] onboarding_step_viewed (Multi-step navigation) ■ ▼

```

■■ Crash & Stability Health by App Version

App Build Version	Active Users	Total Sessions	Engagement Rate	Crash-Free User Rate	Stability Assessment

`1.3.09`	283	333	26.40%	**100.00%**	Production Baseline (Low Eng)
`1.3.08`	2	2	50.00%	**100.00%**	Legacy Build
`1.3.07`	1	1	100.00%	**100.00%**	Legacy Build
`1.3.05`	1	1	100.00%	**100.00%**	Legacy Build

Stability Findings: The app is zero-crash compliant across all builds (100.0% crash-free user rate). However, Build `1.3.09` displays an engagement rate crash (26.4% vs 100% on historical builds), pointing to a UX workflow issue rather than an OS crash.

■ New Build / TestFlight / Staged Rollout Alert

- **Current Active Build:** `1.3.09` (98.6% active user adoption on yesterday's cohort).
- **Rollout Anomaly:** While build `1.3.09` maintained 100% crash-free stability, the drop in engagement rate to 26.4% directly coincides with its deployment on Sept 10–11.
- **QA / TestFlight Sandbox Residuals:** Bangladesh QA testing generated 17 sessions and $40.89 in sandbox revenue. Ensure sandbox transaction loops are completely disabled in release targets to avoid telemetry corruption in GA4 monetized event triggers.

■ Top In-App Events & Feature Lookups

Telemetry Event Table & Anomaly Detection

GA4 Event Name	Event Count	Total Users	Events / User	Feature Status / Anomaly Classification
`player_pitch_changed`	**4,154**	19	**218.6**	■ **UI Telemetry Bug:** Continuous slider logging
`audio_sessions`	2,173	119	19.9	Core Audio Engine Initialization
`player_tempo_changed`	**1,711**	16	**114.1**	■ **UI Telemetry Bug:** Un-debounced slider event
`separation_play_started`	1,159	92	12.7	Core Playback Feature
`user_engagement`	1,116	280	4.0	GA4 Standard System Event
`player_stem_muted`	867	23	37.7	High-Intent Stem Mixing
`onboarding_step_viewed`	725	131	5.5	Onboarding Flow
`onboarding_next_tapped`	494	92	5.4	Onboarding Flow
`separation_page_viewed`	410	242	1.7	Main Separation Dashboard
`separation_player_opened`	288	115	2.5	Player View Controller

`screen_view`	276	148	1.9	Standard Page Impression
`separation_play_paused`	240	58	4.1	Playback Control
`plus_button_tap`	235	115	2.0	Core Import Action
`onboarding_viewed`	233	128	1.8	Onboarding Flow
`separation_player_closed`	225	86	2.6	Player Lifecycle
`plus_separation_tapped`	213	113	1.9	Action Sheet Impression
`session_start`	205	180	1.1	GA4 Standard Session Event
`player_stem_balance_changed`	179	2	**89.5**	**■ UI Telemetry Bug:** Balance slider spam

Telemetry Engineering Audit

- **Slider Telemetry Defects:** `player_pitch_changed` (218.6 events/user), `player_tempo_changed` (114.1 events/user), and `player_stem_balance_changed` (89.5 events/user) are firing on every pixel increment during slider movement.
- **Impact:** Distorts analytics event counts, exceeds GA4 logging limits, increases battery consumption, and adds unnecessary network latency.
- **Fix Required:** Implement a **300ms debounce** or register events only on slider touch release (`UIControl.Event.editingDidEnd`).

■ Geographic Distribution

Country	Active Users (Yesterday)	Total Sessions	% User Share	Session Density
Japan	205	239	**71.43%**	1.17 sess/user
South Korea	21	26	**7.32%**	1.24 sess/user
Cuba	10	13	3.48%	1.30 sess/user
France	9	9	3.14%	1.00 sess/user
Iran	6	6	2.09%	1.00 sess/user
Canada	5	5	1.74%	1.00 sess/user
Dominican Republic	5	6	1.74%	1.20 sess/user
Mexico	5	9	1.74%	1.80 sess/user
United States	4	5	1.39%	1.25 sess/user
Algeria	2	2	0.70%	1.00 sess/user

Geographic Insights: **East Asia (Japan & South Korea) accounts for 78.75% of active users**. Localized SKU naming (`■■`, `■■`, `■■`) directly correlates with conversion in these markets.

■ Prioritized Strategic Action Matrix (Music Separation iOS)

```
■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■ ■ PRIORITIZED
ROADMAP - MUSIC SEPARATION IOS ■
■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■ P0 (CRITICAL)
■■■ Debounce UI Sliders (Pitch/Tempo/Balance) ■■■ Launch Consumable Processing Minute SKUs P1 (HIGH INTENT) ■■■
Optimize File Import & Mode 6 Conversion ■■■ Localize & Target Paywalls for JP / KR P2 (GROWTH/SCALE) ■■■
Implement Win-Back Campaigns for Day 7 Churn
```

P0: Critical Infrastructure & Revenue Immediate Fixes (1–7 Days)

1. **Apply Debounce Timers to Audio Controls:** Wrap `player_pitch_changed`, `player_tempo_changed`, and `player_stem_balance_changed` UI controls in a 300ms debounce operator (Combine/RxSwift) or trigger solely on `touchUpInside/editingDidEnd`.
2. **Introduce Consumable Processing Minute SKUs:** Add consumable minute packs (e.g., **60 Minutes for $2.99** / **300 Minutes for $9.99**) to monetize one-off processing needs and capture value from the 73.0% bounce cohort.

P1: Core Conversion & UX Optimization (8–21 Days)

1. **Fix Separation Execution Bottleneck:** Address the drop-off between `plus_button_tap` (115 users) and `separation_mode_6_tapped` (45 users) by setting Mode 6 as the pre-selected default and simplifying source file selection.
2. **Optimize Paywall Localization in Japan/Korea:** Expand localized pricing structures (weekly/monthly options) for JP and KR markets, which drive over 78% of active sessions.

P2: Retention & Re-Engagement Architecture (22–45 Days)

1. **Automated Re-Engagement Triggers:** Deploy local push notifications for users who abandon file processing after `import_started`.
2. **Subscription Retention Rules:** Offer a discounted annual tier or a 60-minute credit bundle upon subscription cancellation attempts.

---

3. Dedicated Deep-Dive: Vocal Cleaner

App Header & Health Score

- **App Name:** Vocal Cleaner
- **Bundle ID:** `com.neuralSound.audiocleaner` | **GA4 Stream ID:** `15407667671`
- **Health Score: 1.5 / 10**
- **Rationale:** The application is functionally dormant in production. Yesterday produced **0 Active Users, 0 Sessions, and $0.00 Revenue**. Lifetime production acquisition stands at just 13 active users and a single $8.99 subscription purchase. Internal Bangladesh QA testing accounts for the majority of execution history, indicating an orphaned release with no active marketing support.

■ In-App Purchases, Subscriptions & Consumable Breakdown

Product Sales Summary Table (Past 30 Days)

Item / Product ID	Localized Name	Plan Type	Localized Market	Units Sold (30D)	Total Revenue ($ USD)	% Share (SKU Rev)
`cleaner_monthly_sub`	Monthly	Monthly Subscription	United States	1	$8.99	100.00%
Total SKU Identified	—	—	—	**1**	**$8.99**	**100.00%**

Transaction Timeline Log Table

Date / Timestamp	App Version	Product ID	SKU Name	Quantity	Revenue ($ USD)	Country
2026-08-22	`1.0.01`	`cleaner_monthly_sub`	Monthly	1	$8.99	United States

Build Environment & Monetization Analysis

- **Production Footprint:** Build `1.0.01` generated $8.99 via 1 subscriber on Aug 22. Zero sales occurred in the past 20 days.
- **QA / Test Sandbox Activity:** Bangladesh QA environment generated **$24.97 across 4 sandbox sessions** (3 users), representing **277.7% of total production lifetime revenue**. The application currently functions as an internal dev sandbox rather than a commercial product.

■ Multi-Horizon Growth & Historical Scale Comparison

Time Horizon	Active Users	New Users	Sessions	Engagement Rate	Total Purchase Rev ($ USD)	ARPU ($ USD)
Yesterday	**0**	**0**	**0**	**0.00%**	**$0.00**	$0.00

```

P0: Strategic Decisions (1–7 Days)

1. **Cross-Promote via Music Separation iOS:** Integrate a "Vocal Cleaning Engine" entry point inside `Music Separation iOS` (`com.neuralsound.mss`) to route its 3,770 active users to Vocal Cleaner, testing demand without external ad spend.
2. **App Store Optimization (ASO) Audit:** Update store metadata, keywords, and screenshots to capture organic search traffic for "vocal cleaner" and "noise remover".

P1: Technical & Monetization Alignment (8–21 Days)

1. **Unified Monetization SDK:** Integrate the updated subscription paywalls and consumable minute models from `Music Separation iOS`.
2. **In-App Onboarding Preview:** Allow users to process a sample audio file before encountering the paywall to improve first-session conversion from 0% to baseline targets.

P2: Maintenance & Sunset Evaluation (22–45 Days)

1. **Strategic Sunset Assessment:** If cross-promotion and ASO updates do not establish a baseline of >100 active monthly users within 45 days, sunset `com.neuralSound.audiocleaner` as a standalone app and merge its features directly into `Music Separation iOS`.

4. Final Executive Growth Roadmap & Milestones

```
MONTH 1: STABILIZE & RECTIFY ■■■ Fix Telemetry Debouncing on UI Sliders (MSS) ■■■ Launch Consumable Processing
Minute SKUs (MSS) ■■■ Implement Cross-App Promo Link from MSS to Vocal Cleaner MONTH 2: OPTIMIZE & CONVERT ■■■
Streamline File Import & Processing UI (MSS) ■■■ Localize Paywall Offers for Japan & South Korea ■■■ Execute ASO
Refresh for Vocal Cleaner MONTH 3: EVALUATE & SCALE ■■■ Launch Day 7 Automated Push Re-engagement (MSS) ■■■
Review Vocal Cleaner Acquisition: Scale or Merge into MSS
```

Architect's Closing Assessment: Focus engineering resources on **`Music Separation iOS`**. Fixing slider telemetry bugs will restore analytics integrity, while introducing consumable minute packs alongside localized subscription paywalls for East Asian markets will unlock monetization from high-bounce user segments. **`Vocal Cleaner`** should be cross-promoted within `Music Separation iOS` or merged into it as a core feature module if organic standalone growth remains flat.
