Strategic Portfolio Insights

1. **Extreme Revenue Concentration & Portfolio Dependency Risk**:
2. **Music Separation iOS** generates **89.9%** of total 30-day portfolio revenue ($79.85 out of $88.84) and commands **99.7%** of active users (3,830 out of 3,843).

   Vocal Cleaner is currently functional **abandonware** with zero active users yesterday, 13 users over 30 days, and zero telemetry events logged.

   Severe Acquisition Decay & Operational Vulnerability:

5. Over the last 7 days, **Music Separation iOS** experienced a severe **-84.0% collapse in Daily New Users** (dropping from 463 on Sept 6 to 74 on Sept 12).

   Daily Engagement Rate plummeted from **90.0%** to **33.1%** over the same timeframe.

   Rollout Degradation (Build `1.3.10`):

   The rollout of build `1.3.10` introduced a critical stability regression, dropping the crash-free user rate to **97.85%** (compared to **100.0%** on build `1.3.09`) while engagement rate tanked to **26.9%** for users on this build.

   Monetization & Regional Mismatch:

10. **Japan** accounts for **70.1%** of active users (197 / 281 daily active users), yet revenue realization remains under-indexed relative to user volume.
11. Subscription reliance is total; **zero consumable minute packs** (e.g., 60-min or 300-min processing credits) exist, creating unnecessary purchase friction for low-frequency/high-intent users.

2. Deep-Dive: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

- **GA4 Property ID**: `533563138` | **Stream ID**: `14402502632`
- **Data Scope**: Production only *(Internal Bangladesh QA sandbox traffic isolated)*
- **Health Score**: **6.5 / 10**

  Rationale: Outstanding core engagement among returning users (avg session duration of **32.5 minutes**) and verified product-market fit in East Asia. However, score is heavily penalized due to:

  1. A sharp **84% top-of-funnel acquisition drop** in 7 days.
  2. Stability regression in build `1.3.10` (**97.85% crash-free rate**).
  3. Severe UI slider event logging bugs draining analytics quotas (up to **492 events/user**).

Build Environment & Monetization Analysis

1. **Production vs. TestFlight Isolation**:
2. Production metrics correctly exclude internal QA activity. Sandbox testing in Bangladesh logged 8 active users and **$8.97 in sandbox revenue**, confirming active TestFlight payment testing prior to store pushes.
3. **Subscriptions vs. Consumables Gap**:
4. **100% of revenue** stems from recurring subscriptions (Monthly: 62.7% share; Weekly: 37.3% share).
5. **Zero consumable minute packs** (e.g., 60-minute or 300-minute separation passes) are offered. This leaves non-subscribers unable to make one-off purchases, capping potential monetization.
6. **Regional FX & Pricing Disparities**:
7. Monthly subscriptions range from **$6.89 (Japan)** to **$9.33 (Portugal)** due to Apple Tier FX adjustments and tax inclusions.
8. Weekly subscriptions in South Korea net ~$3.20/wk ($12.80/mo nominal), delivering a higher effective ARPPU than standard monthly tiers.
