Executive Portfolio Analytics & Monetization Growth Report

1. Portfolio Executive Summary & Health Dashboard

This report provides a unified portfolio health analysis comparing all active mobile applications within the GA4/Firebase ecosystem (**Music Separation iOS** and **Vocal Cleaner**). Metrics cover multi-horizon user growth, monetization performance, build stability, user retention, and telemetry integrity. Internal development and QA traffic (Bangladesh sandbox/test devices) have been isolated from production metrics to preserve clean commercial baselines.

Portfolio Overview Table (Past 30 Days Baseline)

Key Portfolio Growth & Architecture Insights

1. **Revenue Concentration & App Asymmetry**:
2. **Music Separation iOS** accounts for **89.9%** of 30-day gross revenue ($79.85) and **99.7%** of active users across the portfolio.
3. **Vocal Cleaner** is essentially dormant in production with **0 active users yesterday** and only 13 active users across 30 days, despite active internal sandbox testing ($17.98 test revenue).
4. **Engagement Collapse Alert on New Build Release**:
5. While Music Separation iOS maintains an overall 30-day engagement rate of **83.1%**, yesterday's single-day engagement dropped drastically to **30.4%** (315 active users). This coincides with the rollout of build **`1.3.10`**, which exhibits a degraded **27.7% engagement rate** compared to version `1.3.09` (**38.8%**).
6. **Telemetry & Event Flooding Flaws**:

7. Analysis reveals severe UI event logging bugs in Music Separation iOS. Undebounced continuous UI sliders (`player_pitch_changed`, `player_tempo_changed`, `player_stem_balance_changed`) are firing hundreds of telemetry events per individual user session (e.g., **338.8 pitch events/user**), artificially bloating event density and skewing session quality metrics.

1. **Subscription Structure**:
2. The product catalog relies entirely on recurring time-based subscriptions (**Monthly** generates **72.67%** of revenue, **Weekly** generates **27.33%**).
3. **Consumable Minute Packs** (e.g., 60-min or 300-min audio processing passes) are missing from the monetization matrix. Users who only need one-off audio stem separations bounce rather than committing to recurring subscriptions.
4. **Production vs. TestFlight Activity**:
5. All 13 production transactions occurred on production builds (`1.3.07`, `1.3.08`, `1.3.09`).
6. Build **`1.3.10` has generated zero production transactions** since deployment.
7. Internal TestFlight activity (Bangladesh testing team) logged 12 sessions, 9 active users, and **$85.86 in sandbox revenue**. TestFlight sandbox retry loops appear functional, confirming StoreKit test configurations pass, but production conversion on `1.3.10` is broken.
8. **Localized Pricing Discrepancies**:
9. Monthly subscription yields vary significantly across markets due to local App Store pricing Tiers and FX updates: **Portugal (Mensal)** yields **$9.33**, **Japan (■■)** yields **$6.89 – $7.05**, **United States / Latin America** yields **$6.99**.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon / Timeframe	Active Users	New Users	Sessions	Engagement Rate	Total Revenue ($ USD)
Yesterday	315	85	398	30.4%	$0.00
Past 7 Days	1,913	1,288	3,169	76.2%	$15.96
Past 30 Days	3,969	3,323	6,727	83.1%	$79.85
Past Year (365d)	4,467	3,876	8,098	84.2%	$93.94

All-Time Baseline	4,467	3,876	8,098	84.2%	$93.94

Historical Scale Commentary

The application experienced **88.8% of its all-time user acquisition within the last 30 days** (3,969 30D active users vs 4,467 lifetime). This indicates a recent acquisition campaign or App Store featuring event. However, lifetime cumulative revenue of **$93.94** against 4.4k users indicates poor long-term monetization efficiency ($0.021 LTV).

Old vs. New User Cohort Deep-Dive

User Cohort Type	Active Users	Total Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views	Views per Session
New Users	202	246	620.4 sec (10m 20s)	27.6%	283	1.15
Returning Users	113	152	1,536.7 sec (25m 36s)	34.9%	89	0.58
Combined Total	**315**	**398**	**970.3 sec (16m 10s)**	**30.4%**	**372**	**0.93**

Cohort Analysis Summary

- **Returning Users demonstrate power usage**: Returning users stay logged in for an average of **25 minutes and 36 seconds per session**, compared to **10 minutes** for new users.
- **Low Screen Navigation**: Returning users view only **0.58 screens per session**, confirming they bypass onboarding and go directly into the core stem separation workspace tool.
- **Low Engagement Rates Across Both Cohorts**: On the reporting day, both New (27.6%) and Returning (34.9%) engagement rates were depressed compared to historical averages (83.1%), reinforcing that build `1.3.10` introduced UX or tracking issues.

■ New Build / TestFlight / Staged Rollout Alert Section

Critical Performance Alert: Build `1.3.10` Engagement Deficit

- **Metric Discrepancy**: Build `1.3.10` currently controls **76.5% of total active users** (241 / 315 users), but its engagement rate has collapsed to **27.7%**.
- **Comparative Baseline**: Build `1.3.09` achieved a **38.8%** engagement rate during its initial deployment, while the overall 30-day property baseline sits at **83.1%**.
- **Root Cause Diagnostics**:

- **GA4 Auto-Event Tracking Disruption**: Build `1.3.10` may have altered scene lifecycle hooks (e.g., `SwiftUI` screen modifiers or `viewDidAppear` calls), preventing GA4 from logging `user_engagement` timer intervals.
- **Paywall / Onboarding Soft-Lock**: A UI bug on build `1.3.10` may be preventing users from advancing past onboarding, forcing them to abandon sessions early.
- **Player Crash / Freeze on Execution**: While native crash logs report 100% crash-free sessions, silent non-fatal JS/C++ audio library hangs during `separation_upload_started` could cause immediate user drop-off.

P0 Actions (Urgent Immediate Fixes — Next 24-48 Hours)

1. **Engine Fix — Debounce UI Sliders**: Implement a `300ms Combine/Rx` debounce pipeline on `player_pitch_changed`, `player_tempo_changed`, and `player_stem_balance_changed` UI controls. Track updates only on touch-up (`UIControlEventTouchUpInside`).
2. **Audit Build 1.3.10 Engagement Regression**: Investigate why `1.3.10` engagement dropped to **27.7%**. Halt staged rollout at current limits until GA4 session lifecycle state methods are verified.

P1 Actions (Product & Monetization Optimization — Sprint 1-2)

1. **Consumable Minute Packs Architecture**: Introduce consumable IAPs (e.g., *60 Processing Minutes for $2.99*, *300 Minutes for $9.99*) via StoreKit 2 alongside existing subscriptions to monetize low-frequency users who bounce without subscribing.
2. **Localized Paywall Localization**: Dynamic local currency paywall optimizations targeting Japan and South Korea, incorporating localized trial copy ("3-Day Free Trial").

P2 Actions (Growth & Acquisition Scaling — Sprint 3-4)

1. **Geographic ASA Push in JP & KR**: Scale Apple Search Ads (ASA) campaigns in Japan and South Korea, leveraging existing high conversion rates (**81.2% total revenue share combined**).

■ New Build / TestFlight / Staged Rollout Alert Section

- **TestFlight Activity Detected**: Internal testing activity in Bangladesh generated 1 active user session and **$17.98 in TestFlight sandbox revenue**, indicating that a new build candidate is actively being evaluated by internal QA.
- **Production Status Alert**: Zero active users over the past 7 days. The updated build candidate should not be pushed to production without fixing basic GA4 event instrumentation.

P0 Actions (Urgent Architectural Requirements)

1. **Implement Core Telemetry Instrumentation**: Integrate GA4 tracking for `cleaner_import_started`, `cleaner_processing_completed`, and `paywall_impression`.
2. **Review TestFlight Build Candidate**: Validate that the build candidate currently being tested in Bangladesh contains proper analytics hooks before pushing to production.

P1 Actions (Product & Portfolio Synergies)

1. **Portfolio Cross-Promotion**: Add a native banner inside **Music Separation iOS** (e.g., *"Clean Background Noise with Vocal Cleaner"*) to route user traffic directly to the Vocal Cleaner App Store listing.

P2 Actions (User Acquisition Strategy)

1. **Keyword Optimization & Small Scale ASA Launch**: Optimize App Store Metadata for terms like *"Noise Reduction"*, *"Vocal Isolator"*, and *"Speech Enhancer"*. Run a targeted $5/day Apple Search Ads discovery campaign in the US to establish baseline user acquisition metrics.
