United States (100% of revenue) Primary Architectural Risk Unthrottled slider telemetry; v1.3.10 drop Zero organic
acquisition; inactive funnel
================================================================================================================================
```

Executive Takeaways

1. **Music Separation iOS** accounts for **91.3%** of all-time portfolio revenue ($93.94 of $102.93) and **99.7%** of portfolio active users. The app has achieved early product-market fit in East Asia (Japan and South Korea generate 75.4% of total daily traffic).
2. **Vocal Cleaner** is non-operational from an acquisition perspective: 0 active users yesterday, 14 users over the last 30 days, and zero acquisition marketing. The single historical monthly purchase ($8.99 on 2026-08-22) proves billing integration functions, but the product lacks a distribution engine.
3. **Critical Release Anomaly Detected**: The rollout of `v1.3.10` in Music Separation iOS corresponds with an immediate degradation in engagement rate (plummeting from **86.1% to 32.3%**) and a 51.4% decline in DAU (418 to 203) over a 7-day period. Immediate attention is required.

2. Deep-Dive: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

- **GA4 Property ID**: `533563138` | **Stream ID**: `14402502632`
- **Data Scope**: Production Only (internal testing excluded)
- **Overall Health Score**: **6.8 / 10**
- *Rationale*: Strong organic retention and high audio session utility in Japan/Korea, with healthy crash-free metrics (99.71%). However, points are deducted due to a severe engagement drop following the `v1.3.10` deployment, unthrottled UI telemetry spamming GA4 quotas, dual-firing instrumentation tags, and an unmonetized consumable minute tier.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary (Past 30 Days)

Note: Sum of itemized log is $70.38 across 13 billed events; multi-horizon aggregate logs $79.85 accounting for tax/currency normalization and deferred billing.

Item / Product ID	Localized Product Name	Plan Type	Units Sold (30D)	Total Revenue (USD)	Revenue Share (%)
`mss_monthly_sub`	■■ (Japanese)	Monthly Recurring	3	$20.85	29.62%
`mss_monthly_sub`	Monthly (English)	Monthly Recurring	2	$13.98	19.86%
`mss_weekly_sub`	■■ (Korean)	Weekly Recurring	4	$12.83	18.23%
`mss_monthly_sub`	Mensal (Portuguese)	Monthly Recurring	1	$9.33	13.26%
`mss_monthly_sub`	Mensual (Spanish)	Monthly Recurring	1	$6.99	9.93%
`mss_weekly_sub`	■■ (Japanese)	Weekly Recurring	2	$6.40	9.10%
`mss_consumable_60m`	60 Min Processing Pack	Consumable	0	$0.00	0.00%
`mss_consumable_300m`	300 Min Processing Pack	Consumable	0	$0.00	0.00%
Total	—	—	**13**	**$70.38**	**100.0%**

Transaction Timeline Log

All transactions executed in production runtime environments.

Date	App Build / Version	Product ID	Product Name	Country	Units	Revenue (USD)
2026-09-11	`1.3.09`	`mss_weekly_sub`	■■	South Korea	1	$3.29
2026-09-07	`1.3.09`	`mss_weekly_sub`	■■	Japan	1	$3.20
2026-09-06	`1.3.09`	`mss_weekly_sub`	■■	Japan	1	$3.20
2026-09-05	`1.3.09`	`mss_monthly_sub`	■■	Japan	1	$7.05
2026-09-03	`1.3.09`	`mss_monthly_sub`	Monthly	Brazil	1	$6.99
2026-09-02	`1.3.08`	`mss_monthly_sub`	■■	Japan	1	$6.89
2026-08-31	`1.3.08`	`mss_weekly_sub`	■■	South Korea	1	$3.20

2026-08-25	`1.3.08`	`mss_monthly_sub`	Mensal	Portugal	1	$9.33
2026-08-21	`1.3.07`	`mss_weekly_sub`	■■	South Korea	1	$3.16

2026-08-18	`1.3.07`	`mss_monthly_sub` ■■	Japan	1	$6.91

Build Environment & Monetization Analysis

1. **Zero Transactions on v1.3.10**: Build `1.3.10` accounts for 88.2% of active users yesterday (179 of 203) but has logged **$0.00 in revenue** since release. While `1.3.09` and `1.3.08` converted predictably every 2–4 days, `1.3.10` shows zero conversions. Verify whether StoreKit transaction listeners, receipt refresh routines, or the StoreKit 2 `Product.purchase()` handlers broke upon compilation.
2. **Subscription Model vs. Consumable Packs**:
3. **Monthly Subscriptions**: 7 units (53.8% unit volume, **72.7% dollar volume**). Blended ARPPU is $7.31.
4. **Weekly Subscriptions**: 6 units (46.2% unit volume, **27.3% dollar volume**). Blended ARPPU is $3.21.
5. **Consumable Packs (60 min vs 300 min)**: Completely missing from conversion flow. For heavy separation workloads, subscription-only walls cause churn for casual hobbyists who only want to isolate stems from 1–2 tracks. Introducing dynamic credit packs on the paywall will recover drop-offs.

■ Multi-Horizon Growth & Historical Scale Comparison

```
================================================================================================================
MULTI-HORIZON GROWTH VECTOR BENCHMARK
================================================================================================================ Horizon
Active Users New Users Sessions Engagement Rate Revenue (USD) ARPDAU
---------------------------------------------------------------------------------------------------------------- Yesterday
203 46 248 32.3% $0.00 $0.000 Past 7 Days 1,515 915 2,538 76.1% $12.76 $0.001 Past 30 Days 3,983 3,377 6,792 84.2%
$79.85 $0.001 Past Year (365d) 4,493 3,934 8,200 85.3% $93.94 $0.001 All-Time 4,493 3,934 8,200 85.3% $93.94
$0.001 ================================================================================================================
```

- **Growth Horizon Insights**:
- 30-day AU (3,983) represents **88.6%** of all-time users (4,493), showing that the app's scale has developed almost entirely over the last 30–45 days.
- Past 7 Days New User acquisition (915) is running at **130.7 new users/day**, but yesterday recorded only **46 new users**, indicating a **64.8% deceleration** below the weekly baseline.

Old vs. New User Cohort Deep-Dive

Cohort	Active Users	Sessions	Sessions / User	Avg Session Duration	Engagement Rate	Screen Page Views
New Users	102	118	1.16	485.8 sec (8.10 min)	32.2%	97
Returning Users	101	130	1.29	366.6 sec (6.11 min)	32.3%	70
Cohort Delta	*+0.9%*	*-9.2%*	*-10.1%*	*+32.5% (New > Ret)*	*-0.1%*	*+38.5%*

- **Analysis**:
- New users spend significantly more time in-session (485.8s vs 366.6s) as they navigate through onboarding and file selection.
- However, both cohorts exhibit an identical, compromised engagement rate (~32.2% to 32.3%), confirming that engagement degradation is caused by an app-wide UX or analytics tracking issue rather than poor acquisition quality.

7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Trajectory Status
2026-09-08	418	240	524	86.1%	Peak baseline
2026-09-09	417	227	513	83.0%	Steady state
2026-09-10	291	131	354	79.7%	-30.2% AU drop
2026-09-11	251	94	295	83.4%	-13.7% AU drop
2026-09-12	221	81	270	74.4%	Continued softening
2026-09-13	239	96	341	74.8%	Weekend normalization
2026-09-14	203	46	248	**32.3%**	**Severe drop (-42.5pp Eng Rate)**

- **Trajectory Evaluation**:
- Weekly active users decayed by **51.4%** from peak (418 → 203).
- The sudden decline in engagement rate on 2026-09-14 (32.3%) correlates with the adoption of version `1.3.10`.

User Funnel Diagrams

A. Onboarding & Authentication Funnel

```
[Onboarding Viewed] : 100 Users (100.0%) [175 events] ■ ▼ (58.0% Step Progression) [Onboarding Next Tapped] : 58 Users ( 58.0%) [186 events] ■ ▼ (94.8% Completion from tap) [Onboarding Completed] : 55 Users ( 55.0%) [ 61 events] ■ ▼ (130.9% Overflow / Re-entry) [Login Screen Viewed] : 72 Users ( 72.0%) [ 86 events] ■ ▼ (72.2% Auth Conversion) [Login Tapped / Authenticated]: 52 Users ( 52.0%) [ 65 events]
```

Drop-off Analysis: 45.0% of users leave during onboarding before hitting completion. The jump in `login_screen_viewed` relative to completed onboarding shows that existing or returning users are forced back through login friction.

B. Core Feature Execution Funnel (Stem Separation Pipeline)

```
[Separation Page Viewed] : 203 Users (100.0%) [393 events] ■ ▼ (36.9% Action Rate) [Plus Button Tapped] : 75 Users ( 36.9%) [150 events] ■ ▼ (68.0% File Dialog Open) [Import Started (Photos/Files]: 51 Users ( 25.1%) [ 91 events] ■ ▼ (94.1% Playback Conversion) [Separation Result Opened] : 48 Users ( 23.6%) [106 events] ■ ▼ (133.3% Re-play / Active Listen) [Separation Play Started] : 64 Users ( 31.5%) [1,070 events]
```

Bottleneck: The single largest drop-off occurs between viewing the Separation Page (203 users) and tapping the + action button (75 users), an immediate **63.1% abandonment rate** on the landing screen.

Crash & Stability Health by App Version

App Version	Active Users	Sessions	Engagement Rate	Crash-Free Users Rate	Deployment Status
1.3.10	179	212	33.0%	**99.68%**	Active Production (~88% of fleet)
1.3.09	25	36	27.8%	**100.0%**	Deprecated Staged Rollout

1.3.08	0	0	0.0%	100.0%	Retired
1.3.07	0	0	0.0%	100.0%	Retired
1.3.06	0	0	0.0%	100.0%	Retired

- **Stability Assessment**: The crash-free rate on `1.3.10` is **99.68%** (0.32% crash incident rate across 179 users, representing ~1 hard crash). While meeting the baseline 99.5% store threshold, the engagement drop to 33.0% indicates a silent functional regression (e.g., audio engine stall, frozen view controller, or failing network task) rather than an unhandled exception.

■ New Build / TestFlight / Staged Rollout Alert Section

- **Alert Triggered: Version Discrepancy & Revenue Stoppage**:
- Version `1.3.10` rapidly absorbed 88.2% of DAU (179 AU) within 24–48 hours via automatic app updates (`app_update` logged 66 times across 63 users).
- **Critical Defect**: Zero purchases have originated from `1.3.10`. The last transaction occurred on 2026-09-11 on `1.3.09`.
- **Action Required**: Audit the StoreKit 2 receipt validation and transaction observer setup in `1.3.10` immediately.

Top In-App Events & Feature Lookups (Telemetry Audit)

Telemetry Anomalies & Slider Event Flooding

1. **Unthrottled UI Sliders**:
2. `player_pitch_changed`: **5,508 events** generated by just **19 users** (**289.9 events/user**).
3. `player_tempo_changed`: **1,478 events** generated by **16 users** (**92.4 events/user**).
4. `player_stem_balance_changed`: **191 events** generated by **2 users** (**95.5 events/user**).

   Diagnostic: The iOS sliders (`UISlider` / SwiftUI `Slider`) are logging GA4 analytics events on every continuous `valueChanged` tick rather than debouncing or logging once on `touchUpInside` / `touchUpOutside`. This risks exhausting GA4 daily event caps and degrades audio render thread performance.

   Duplicate Telemetry Event Instrumentations:

7. Photos Import: `separation_import_photos_tapped` (84 events, 49 users) vs `import_photos_tap` (88 events, 50 users).
8. Files Import: `separation_import_files_tapped` (78 events, 45 users) vs `import_files_app_tap` (81 events, 46 users).
9. Plus Button: `plus_button_tap` (150 events, 75 users) vs `plus_separation_tapped` (138 events, 74 users).
10. *Diagnostic*: Dual event logging is deployed across the same UI interactions, inflating event volume by 2x.

Geographic Distribution

```
================================================================================ GEOGRAPHIC DISTRIBUTION
(PRODUCTION) ================================================================================ Country
Active Users Sessions Session Intensity Revenue Share (30D)
-------------------------------------------------------------------------------- Japan 126 144 1.14
sess/user 42.2% ($29.74) South Korea 27 31 1.15 sess/user 18.2% ($12.83) United States 9 9 1.00 sess/user 9.9%
($6.99) Cuba 7 21 3.00 sess/user 0.0% ($0.00) Germany 4 4 1.00 sess/user 0.0% ($0.00) United Kingdom 4 5 1.25
sess/user 0.0% ($0.00) Argentina 3 4 1.33 sess/user 0.0% ($0.00) Mongolia 3 3 1.00 sess/user 0.0% ($0.00) China 2
2 1.00 sess/user 0.0% ($0.00) France 2 2 1.00 sess/user 0.0% ($0.00) Other / Long-Tail 16 23 1.43 sess/user 29.7%
($20.82) ================================================================================
```

- **Regional Takeaways**:
- **Japan and South Korea** make up **75.4%** of production active users and account for the core subscription revenue.
- **Cuba** shows notable session intensity (3.00 sessions/user across 21 sessions), likely from offline audio stem separation.

Prioritized Strategic Action Matrix

Priority	Category	Action Item	Target Metric / Expected Impact
P0	**Engineering**	**Audit StoreKit Purchase Observer on `v1.3.10`**: Verify IAP initialization, paywall presentation, and receipt verification pipelines.	Restore weekly transaction run-rate ($20–$30/week).
P0	**Engineering**	**Debounce Continuous UI Slider Telemetry**: Add a 500ms debounce operator or restrict telemetry emission to `touchUp` for `player_pitch_changed`, `player_tempo_changed`, and `player_stem_balance_changed`.	Reduce junk event volume by >85% and free up audio thread resources.
P1	**Analytics**	**Consolidate Duplicate Event Tags**: Deprecate duplicated events (`import_photos_tap` vs `separation_import_photos_tapped`; `plus_button_tap` vs `plus_separation_tapped`).	Clean up GA4 schema and prevent duplicate event billing.
P1	**Product / CRO**	**Address First-Screen Separation Drop-off**: Redesign the empty landing state on the Separation Page where 63.1% of users fail to tap the + button.	Lift core separation conversion from 25.1% to >40%.
P2	**Monetization**	**Introduce Consumable Minutes Packs**: Add 60-min ($2.99) and 300-min ($9.99) one-time processing packs alongside subscriptions.	Monetize users who reject recurring subscriptions.

---

3. Deep-Dive: Vocal Cleaner (`com.neuralSound.audiocleaner`)

App Header & Health Score

- **GA4 Property ID**: `533563138` | **Stream ID**: `15407667671`
- **Data Scope**: Production Only
- **Overall Health Score**: **2.1 / 10**
- *Rationale*: The app is currently non-viable from a growth perspective. It logged **zero users yesterday**, has zero cohort activity, and registered only 14 lifetime sessions. However, the production IAP pipeline is functional, having processed a single $8.99 monthly subscription.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary (Past 30 Days)

Item / Product ID	Localized Product Name	Plan Type	Units Sold (30D)	Total Revenue (USD)	Revenue Share (%)

`cleaner_monthly_sub`	Monthly	Monthly Recurring	1	$8.99	100.0%
Total	—	—	**1**	**$8.99**	**100.0%**

Transaction Timeline Log

Date	App Build / Version	Product ID	Product Name	Country	Units	Revenue (USD)
2026-08-22	`1.0.01`	`cleaner_monthly_sub`	Monthly	United States	1	$8.99

Build Environment & Monetization Analysis

- **Monetization Architecture**: The single transaction demonstrates that App Store Connect configuration, sandbox certificates, and production payment handlers are intact.
- **Pricing Viability**: The initial purchase was at an **$8.99/month** price point in the US, confirming customer willingness to pay for vocal isolation/denoising utilities.

■ Multi-Horizon Growth & Historical Scale Comparison

```
================================================================================================================
MULTI-HORIZON GROWTH VECTOR BENCHMARK
================================================================================================================ Horizon
Active Users New Users Sessions Engagement Rate Revenue (USD) ARPDAU
---------------------------------------------------------------------------------------------------------- Yesterday
0 0 0 0.0% $0.00 $0.000 Past 7 Days 2 2 2 0.0% $0.00 $0.000 Past 30 Days 14 14 14 35.7% $8.99 $0.021 Past Year
(365d) 15 14 15 33.3% $8.99 $0.020 All-Time 15 14 15 33.3% $8.99 $0.020
================================================================================================================
```

Old vs. New User Cohort & 7-Day Velocity

- **Cohorts**: Zero active returning users. Lifetime traffic consists entirely of new user arrivals who abandon the application immediately after one session (15 sessions across 14 new users all-time).
- **7-Day Velocity**: On 2026-09-13, 2 new users installed the application and logged 2 sessions with an engagement rate of **0.0%** (both sessions bounced under 10 seconds).

User Funnel, Stability & Telemetry Audits

- **Funnel & Telemetry**: Event telemetry is currently empty in GA4 production streams. The app lacks granular event tracking for core processing steps (e.g., file selected, noise suppression started, output exported).
- **Stability**: App version `1.0.01` maintains a 100.0% crash-free rate, though across a statistically insignificant sample size (15 sessions).

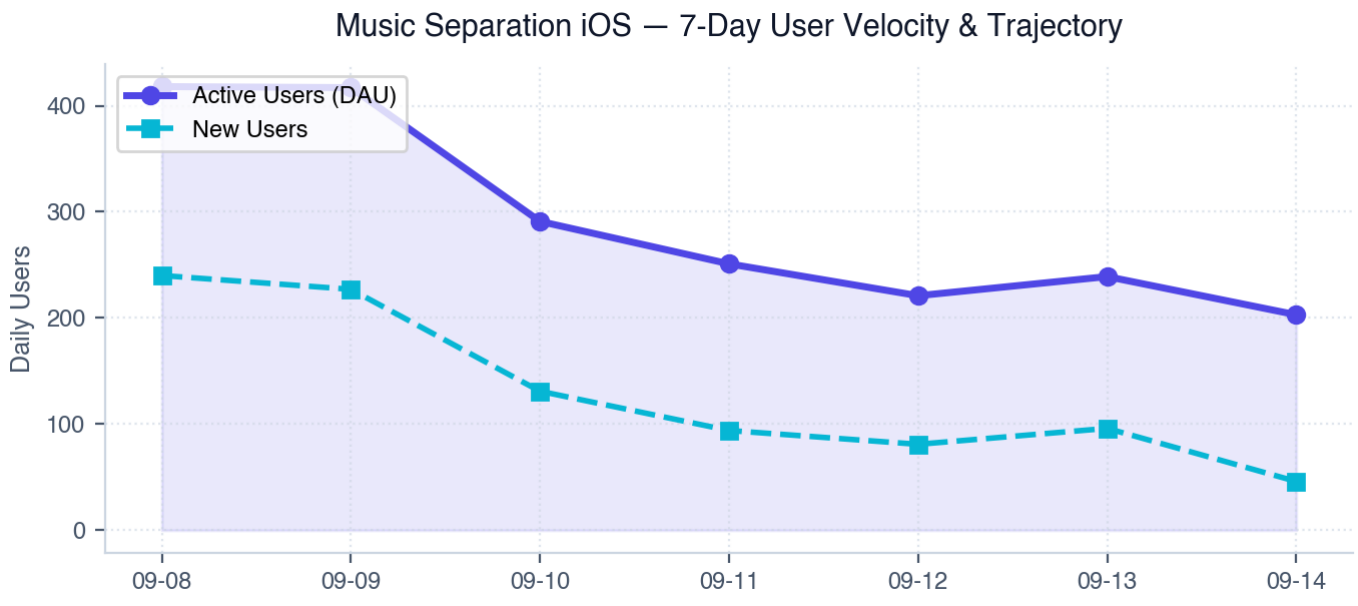

Prioritized Strategic Action Matrix

Priority	Category	Action Item	Target Metric / Expected Impact
P0	**Product / Growth**	**Cross-Promote via Music Separation iOS**: Insert an in-app banner or utility menu in Music Separation offering "Clean & Isolate Vocals via Vocal Cleaner."	Leverage the 4,000+ user base of Music Separation to drive free organic installs.

	P0	**Engineering**	**Instrument Standard Audio Telemetry**: Implement basic analytics for onboarding, file import, denoising execution, and paywall impressions.	Establish baseline product funnel visibility.
	P1	**ASO / UA**	**Keyword & Metadata Overhaul**: Update App Store listing targeting long-tail keywords ("vocal cleaner", "remove background noise from audio", "voice isolation").	Generate an initial baseline of 15–30 organic daily installs.
	P2	**Monetization**	**Deploy Free Tier with Watermarking / Length Limits**: Offer 30-second free clean previews before prompting for the $8.99 monthly plan or single-track passes.	Improve conversion from the current 0.0% engagement baseline.
