Portfolio Architectural Assessment

1. **Asymmetric Portfolio Distribution**: `Music Separation iOS` drives **90.0% of total 30-day portfolio revenue** ($79.85) and **99.7% of active users**. `Vocal Cleaner` is functionally dormant in production, suffering from near-zero top-of-funnel user acquisition.
2. **Critical Build Regression Alert**: In `Music Separation iOS`, the rollout of Build **1.3.10** on September 15 coincided with a **catastrophic drop in engagement rate from 77.9%–83.4% down to 26.5%**, despite active users jumping to 325.
3. **Telemetry & Event Flooding Bugs**: High event-per-session numbers in `Music Separation iOS` (50.67 events/session) are driven by un-debounced UI slider controls (`player_pitch_changed`, `player_tempo_changed`, and `player_stem_balance_changed`) logging over 200–450 events per user.

4. **Geographic Revenue & Usage Concentration**: Japan generates **79.7% of daily active users** (259/325 AU) and **47.7% of subscription revenue** for `Music Separation iOS`. South Korea acts as the primary driver for weekly subscriptions.

2. Deep-Dive Audit: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

- **Bundle ID**: `com.neuralsound.mss` | **Stream ID**: `14402502632`
- **App Health Score**: **6.8 / 10**
- **Rationale**: Strong retention baseline in historical cohorts (82.4% 30D engagement) and recurring subscription revenue in Tier-1 East Asian markets (JP/KR). However, the score is penalized due to:
- A severe engagement drop in the latest build (**v1.3.10**).
- Severe telemetry bloat (un-debounced sliders skewing event counts).
- High onboarding friction (only ~28% of main page viewers initiate a separation process).

Build Environment & Monetization Analysis

- **Production vs Sandbox Isolation**: Production transactions are clean. Internal testing (Bangladesh) executed **$20.97** in StoreKit sandbox test purchases across 1 active testing user. Sandbox retry loops are properly quarantined from production reporting.
- **Subscription Model Distribution**: Monthly plans represent **72.7% of total product revenue** ($51.15), providing stable recurring baseline revenue. Weekly subscriptions represent **27.3%** ($22.63), driven by South Korea and Japan.
- **Consumable Minute Packs**: No consumable minute SKU transactions were logged in the dataset. Monetization relies entirely on auto-renewable subscriptions.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon Window	Active Users (AU)	New Users (NU)	Total Sessions	Avg Engagement Rate	Purchase Revenue ($ USD)
Yesterday (09/15)	325	105	381	26.5%	$0.00
Past 7 Days	1,469	785	2,366	70.4%	$12.76

Lifetime Total	4,698	4,044	8,623	83.9%	$93.94

Key Insight: 88.9% of lifetime active users were acquired within the past 30 days (4,175 / 4,698), showing recent user acquisition velocity. However, 09/15 yesterday metrics reflect an engagement drop (26.5% vs 82.4% baseline).

Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views	Views / User

New Users	231	254	357.3 sec (5.95 min)	24.4%	270	1.17

3. Deep-Dive Audit: Vocal Cleaner (`com.neuralSound.audiocleaner`)

App Header & Health Score

- **Bundle ID**: `com.neuralSound.audiocleaner` | **Stream ID**: `15407667671`
- **App Health Score**: **2.5 / 10**
- **Rationale**: Severely underperforming application asset. Production acquisition is completely stalled (0 active users yesterday, 14 total in 30 days). While the infrastructure maintains a 100% crash-free rate and produced a single $8.99 monthly subscription on August 22, the app lacks organic traffic, localized metadata, and active marketing pipelines.

Priority	Focus Area	Issue / Opportunity	Required Fix / Implementation	Target Metric Impact
P0	**App Store Optimization**	Zero Organic Acquisition	Overhaul ASO keywords, App Store screenshots, and subtitle targeting "Vocal Remover", "Noise Cleaner", and "Audio Enhancer".	Drive Baseline Acquisition to >50 New Users/Day.
P0	**Telemetry Instrumentation**	Missing Custom Telemetry	Integrate uniform GA4 event schemas (`clean_audio_started`, `clean_audio_completed`, `paywall_viewed`) to monitor usage.	Establish end-to-end user funnel visibility.
P1	**Cross-Promotion Strategy**	Unlocked Portfolio Traffic	Implement cross-promotion banners and interstitial cards inside `Music Separation iOS` targeting vocal cleaning features.	Synergize cross-app user funnel and capture high-intent users.
P2	**Monetization Optimization**	Single Tier Pricing Reliance	Introduce a 3-day free trial on the $8.99 monthly plan along with a $2.99 weekly starter tier.	Lift initial Paywall Conversion Rate to >5.0%.
