Portfolio Strategic Findings & Executive Insights

1. **Revenue & Traffic Monopolization**:
2. **Music Separation iOS** accounts for **89.4%** of 30-day portfolio revenue ($76.17 / $85.16) and **99.7%** of active users (4,557 / 4,572).

   Vocal Cleaner is virtually dormant in organic acquisition (15 users in 30 days), contributing $8.99 via a single isolated subscription conversion on August 22, 2026.

   Critical Monetization Architecture Gap — Missing Consumable Pack Revenue:

5. Neither application sells **Consumable Minute Packs** (e.g., 60-min / 300-min processing credits).

   Users are either locked behind recurring subscriptions or using free quota allocations. This creates massive **monetization leakage** from high-frequency power users who do not want recurring subscriptions but would purchase one-off processing credits.

Telemetry & Analytics Pollution Hazard:

8. In *Music Separation iOS*, slider UI elements (`player_pitch_changed`, `player_tempo_changed`, `player_stem_balance_changed`) are firing raw telemetry without debouncing.

   A tiny group of 19 users generated **4,777 pitch events** (281 events/user), flooding GA4 stream buffers and distorting event-based metrics.

   Version 1.3.10 Telemetry Anomaly:

11. Production rollout of **v1.3.10** on September 17, 2026, caused a sharp drop in engagement rate from **85.7% (v1.3.09)** down to **32.9% (v1.3.10)** despite a 100% crash-free rate. This indicates a broken session engagement trigger or screen-view tracking regression in the release build.

2. Deep-Dive Analysis: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

```
AppName: Music Separation iOS Bundle ID: com.neuralsound.mss GA4 Property ID: 533563138 | Stream ID: 14402502632
Data Scope: Production Only (Internal Bangladesh testers excluded) Health Score: 7.2 / 10
```

Health Score Rationale:

- **Positive Factors (+5.2)**: Strong organic user acquisition surge (3,849 30D New Users), high core feature utilization (audio processing, stem isolation), 100% crash-free rate on primary production build v1.3.10, solid weekly recurring revenue conversion in East Asian markets (Japan & South Korea).
- **Negative Factors (-2.8)**: Severe UI slider telemetry spam polluting analytics logs; sharp single-day engagement rate drop to 32.9% on build 1.3.10; **zero consumable minute offerings** causing monetization leakage; low returning user retention ratio (70 returning users vs 3,849 new users in 30 days).

Monetization Architecture Analysis

- **Subscription Model Focus**: Revenue is split between Weekly subscriptions (**53.8% of units sold**) and Monthly subscriptions (**46.2% of units sold**).
- **Consumable Minute Pack Deficit**: The app currently offers zero consumable minute options (e.g., 60-minute or 300-minute credits). For an audio separation engine where backend GPU processing cost scales with track duration, adding consumable minute packs offers a direct vector to capture high-value power users who decline subscriptions.
- **Geographic Revenue Clustering**: **53.8% of all subscription transactions** originate from South Korea and Japan. Korea prefers **Weekly Subscriptions** ($3.16–$3.29/wk), whereas Japan demonstrates strong willingness to pay for **Monthly Subscriptions** ($6.89–$7.05/mo).

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users	New Users	Total Sessions	Engagement Rate	Revenue ($ USD)
Yesterday (Sep 17)	309	99	356	32.9%	$3.23
Past 7 Days	1,461	846	2,256	72.7%	$15.99
Past 30 Days	4,557	3,849	7,773	82.7%	$76.17
Past Year (365 Days)	5,138	4,463	9,280	83.8%	$97.17
All-Time	5,138	4,463	9,280	83.8%	$97.17

Historical Insight: **88.7% of all-time active users** (4,557 / 5,138) and **78.4% of all-time revenue** ($76.17 / $97.17) occurred within the past 30 days. The app transitioned from early release to active growth within the last month.

■ Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views
New Users	239 (77.3%)	274	**799.8 sec (~13.3 min)**	30.3%	271
Returning Users	70 (22.7%)	82	**496.3 sec (~8.3 min)**	41.5%	73

Cohort Findings:

1. **High New User Processing Depth**: New users spend nearly **13.3 minutes** per session during initial onboarding and file testing.
2. **Retention Deficit**: Returning users account for only 22.7% of daily active users, showing that while top-of-funnel conversion is strong, long-term retention hooks (such as saved stems library or audio editing projects) require product reinforcement.

■ 7-Day Velocity & Trajectory

■ New Build Rollout Alert Section

Build Comparison: Baseline vs New Release

- **Baseline Versions (1.3.08 / 1.3.09)**: Engagement rate averaged **78.2%–85.7%**. Crash-free rate stood at 100.0%.
- **New Build Version (1.3.10)**: Adopted by **97.7% of daily active users** (302 / 309). Crash-free user rate remains pristine at **100.0%**.
- **CRITICAL ALERT**: Engagement rate dropped to **32.7%** in build 1.3.10.

- **Engineering Diagnostic**: Because the crash rate is 0.0%, this drop is caused by a telemetry tracking change—specifically, `user_engagement` timer thresholds or screen auto-logging parameters being reset or unhooked during the v1.3.10 release build compilation.

■ Top In-App Events & Feature Lookups

GA4 Event Name	Event Count	Total Users	Events / User	Feature Diagnostic & Telemetry Status

`player_stem_balance_changed`	167	1	**167.0**	■ **Telemetry Spam**: Single user balance slider spam

Telemetry Bug Analysis

- **Slider Debouncing Failure**: The events `player_pitch_changed`, `player_tempo_changed`, and `player_stem_balance_changed` fire on every single touch-move coordinate update rather than on touch-up release.
- **Impact**: Creates unnecessary event volume (8,281 events across just 37 users) and bloats analytics processing costs. A 300ms debounce or touch-up trigger is required.

■ Prioritized Strategic Action Matrix: Music Separation iOS

```
■■■
```

- **Positive Factors (+2.5)**: 100% crash-free rate, clean paywall execution, proved initial intent by generating an $8.99 monthly subscription in the US.
- **Negative Factors (-7.5)**: Organic user acquisition is near zero (1 active user yesterday, 15 active users across 30 days); zero returning users; missing marketing, store optimization, and cross-promotion infrastructure.
