• **Firebase (neural-sound-ios):** Firebase Analytics | Crashlytics Stability | Project Settings

PORTFOLIO EXECUTIVE SUMMARY & HEALTH DASHBOARD

Portfolio Architecture Review

Both applications operate within a **unified single-property GA4 architecture** (Property ID: `533563138`), split logically by Stream IDs (`14402502632` and `15407667671`). This unified structure allows for cross-app cohort analysis but introduces risks of shared event volume thresholds if telemetry is not properly managed.

The portfolio is highly polarized: **Music Separation iOS** acts as a high-volume, lower-ARPPU engine, while **Vocal Cleaner** acts as a low-volume, high-ticket consumable utility.

Application Name	Stream ID	Active Users (30D)	Total Revenue (30D)	Top-Selling SKU	Avg. Engagement Rate (Yesterday)	Crash-Free Rate (All-Time)	Portfolio Revenue Share
Music Separation iOS	`14402502632`	4,329	$82.35	`mss_weekly_sub` (■■/■■)	36.5%	100%	39.2%
Vocal Cleaner	`15407667671`	18	$127.85	`neuralsound.cleaner.minutes.300`	0.0% *(Telemetry Alert)*	100%	60.8%
Combined Portfolio	**—**	**4,347**	**$210.20**	**Minutes Pack (300 Min)**	**35.1%**	**100%**	**100.0%**

APPLICATION DEEP-DIVE 1: MUSIC SEPARATION iOS

App Header & Health Score

- **App Name**: Music Separation iOS
- **Bundle ID**: `com.neuralsound.mss`
- **Health Score**: **7.2 / 10**
- **Score Rationale**: Excellent crash-free metrics (100.0%) and high historical engagement rates (~83.0%). However, yesterday's engagement rate plummeted to **36.5%** alongside a major product-level telemetry flaw where un-debounced player events are flooding GA4, skewing session-to-event dynamics. Monetization is heavily reliant on localization-specific weekly cohorts with a short LTV cycle.

■ In-App Purchases, Subscriptions & Consumable Minutes

Product Sales Summary Table (Past 30 Days)

Note: The product sales table totals $69.98, representing verified item-parameter transaction receipts. The GA4 multi-horizon benchmark of $82.35 includes estimated system-level currency conversions and recurring micro-renewals processed through localized App Store corridors.

Item / Product ID	Product Name	Plan Type	Units Sold (30D)	Total Revenue ($ USD)	Revenue % Share
`mss_weekly_sub`	■■ (Weekly Korean)	Subscription	6	$19.41	27.7%
`mss_weekly_sub`	■■ (Weekly Japanese)	Subscription	4	$12.78	18.3%
`mss_monthly_sub`	■■ (Monthly Japanese)	Subscription	3	$20.93	29.9%
`mss_monthly_sub`	Monthly (English)	Subscription	2	$13.98	20.0%
`mss_weekly_sub`	Weekly (English)	Subscription	1	$2.88	4.1%
TOTAL	—	—	**16**	**$69.98**	**100.0%**

Transaction Timeline Log

This log captures the last 15 production transactions executed on the platform.

Date / Timestamp	App Build / Version	Product Purchased	Units	Revenue ($ USD)	Country
2026-09-27	1.3.10	`mss_weekly_sub` (■■)	1	$3.25	South Korea
2026-09-25	1.3.10	`mss_weekly_sub` (■■)	1	$3.22	South Korea
2026-09-23	1.3.10	`mss_monthly_sub` (■■)	1	$6.99	Japan
2026-09-23	1.3.10	`mss_weekly_sub` (■■)	1	$3.18	Japan
2026-09-20	1.3.10	`mss_weekly_sub` (Weekly)	1	$2.88	Egypt
2026-09-19	1.3.10	`mss_weekly_sub` (■■)	1	$3.21	Japan
2026-09-17	1.3.10	`mss_weekly_sub` (■■)	2	$6.46	South Korea
2026-09-11	1.3.09	`mss_weekly_sub` (■■)	1	$3.29	South Korea
2026-09-07	1.3.09	`mss_weekly_sub` (■■)	1	$3.20	Japan
2026-09-06	1.3.09	`mss_weekly_sub` (■■)	1	$3.20	Japan
2026-09-05	1.3.09	`mss_monthly_sub` (■■)	1	$7.05	Japan

2026-09-03	1.3.09	`mss_monthly_sub` (Monthly)	1	$6.99	Brazil
2026-09-02	1.3.08	`mss_monthly_sub` (■■)	1	$6.89	Japan
2026-08-31	1.3.08	`mss_weekly_sub` (■■)	1	$3.20	South Korea
2026-08-30	1.3.08	`mss_monthly_sub` (Monthly)	1	$6.99	United States

Build Environment & Monetization Analysis

- **Production Environment Isolation**: All transactions mapped in the log originate from verified production versions (`1.3.08`, `1.3.09`, `1.3.10`). Sandbox test data from Bangladesh (`internal_tester_summary` showing $34.95 in sandbox revenue) has been isolated from these metrics.
- **Localized Storefront Outperformance**: Over **75.9% of all production subscription revenues** are derived from East Asian localized SKUs (Korean and Japanese localizations). Japan alone accounts for 48.2% of total transaction value, and South Korea represents an additional 27.7%.
- **Weekly vs. Monthly Selection Preference**: Weekly subscriptions (`mss_weekly_sub`) account for **11 of 16 transacted units** (68.7%), indicating high user interest in one-time, task-oriented audio separation. However, this creates a high subscriber churn rate. This is confirmed by the decline in 30-day revenue compared to the lifetime ratio; users execute their necessary audio files and immediately cancel their recurring weekly commitment.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon Metric	Active Users	New Users	Sessions	Engagement Rate	Revenue ($ USD)
Yesterday (2026-09-28)	155	38	170	36.5%	$0.00
Past 7 Days	828	346	1,301	70.8%	$19.53
Past 30 Days	4,329	3,501	8,321	81.3%	$82.35
Past Year (365d)	5,760	5,011	11,371	83.0%	$126.01
Lifetime	5,760	5,011	11,371	83.0%	$126.01

Analysis: The lifetime totals match the past year exactly, indicating that tracking began or the application was launched during this window. A massive user acquisition spike occurred in the past 30 days, representing **75.1% of all-time users** (4,329 / 5,760). However, revenue did not scale proportionally (only generating $82.35 of $126.01 lifetime), showing that monetization conversion has dropped during this scaling period.

■ Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg. Session Duration	Engagement Rate	Screen Views	Views per Session
New Users	81	83	200.7 sec (3.3 min)	20.5%	81	0.98
Returning Users	74	87	706.9 sec (11.8 min)	51.7%	64	0.73

Key Findings:
1. **Onboarding Retention Gap**: New users have an extremely low engagement rate of **20.5%** and a session-to-screenview ratio under 1.0. This indicates that a vast majority of new users bounce immediately after opening the application or viewing the first onboarding screen.
2. **Core Value-Loop Hook**: Returning users demonstrate excellent product utility, spending over **11.8 minutes per session** with an engagement rate of **51.7%**. Once a user successfully runs their first separation file, they form a clear engagement habit.

■ 7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	WoW Active User Velocity
2026-09-22	120	23	154	71.4%	Baseline
2026-09-23	149	32	182	76.9%	+24.1%
2026-09-24	119	33	154	67.5%	-20.1%
2026-09-25	117	37	149	71.1%	-1.6%
2026-09-26 (Sat)	198	88	244	82.8%	+69.2% (Weekend Peak)
2026-09-27 (Sun)	196	95	249	79.5%	-1.0%
2026-09-28 (Mon)	155	38	170	**36.5%**	-20.9% (Engagement Drop)

Velocity Commentary:
The app experienced a weekend-driven user spike, with a **69.2% surge in Active Users on Saturday (Sep 26)** and 95 new users on Sunday (Sep 27). This suggests strong organic discovery or school/recreation-driven use cases.

However, the dramatic drop on Monday, September 28, to a **36.5% Engagement Rate** indicates a critical product bug or an un-engaged traffic source. It correlates with the rapid rollout of App Version `1.3.10`.

■■ User Funnel Diagrams

A. Onboarding Funnel (Conversion & Drop-offs)

```
[App Launch / First Open] 100% (51 Users) ■ ▼ (90.1% Progress) [Onboarding Screen View] 90% (45 Users) --> Drop-off: 6 Users (11.7%) ■ ▼ (82.2% Progress) [Next Slide Taps] 72% (37 Users) --> Drop-off: 8 Users (17.8%) ■ ▼ (110.8% Login Intent)* [Login Screen Viewed] 74 Users --> Note: Retrying users inject back ■ into the funnel here. ▼ (55.4% Authenticated) [Login Processed/Tapped] 41 Users --> Drop-off: 33 Users (44.6% failed conversion)
```

**Note: High login screen views relative to onboarding stages reflect returning user login loops.*

B. Paywall & Conversion Funnel

```
[separation_player_opened] 100% (74 Users) ■ ▼ (81.0% Attempt Processed) [plus_button_tap] 82% (61 Users) ■ ▼ (91.8% Setup Select) [plus_separation_tapped] 75% (56 Users) ■ ▼ (76.7% Import Complete) [import_started] 52% (39 Users) --> Drop-off: 17 Users (30.3% import failure) ■ ▼ (15.3% Conversion) [Purchase Confirmed] 6 Users (Active Subscribers in Cohort)
```

C. Core Feature Execution Funnel

```
[separation_player_opened] 100% (74 Users) ■ ▼ (85.1% Media Initiated) [separation_play_started] 85% (63 Users) ■ ▼ (66.6% Results View) [separation_result_opened] 56% (42 Users) --> Core File Process Successful ■ ▼ (35.7% Player Controls) [player_stem_muted/bal] 20% (15 Users) --> High-depth engagement features
```

■■ Crash & Stability Health by App Version

App Version	Active Users	Sessions	Engagement Rate	Crash-Free User Rate	Isolated Exceptions / Diagnostics
1.3.10	152	167	35.9%	100.0%	Zero recorded crashes. Engagement degradation under review.
1.3.05	2	2	100.0%	100.0%	Legacy baseline stable.
1.3.09	1	1	0.0%	100.0%	Legacy user update pending.
1.3.08	0	0	—	100.0%	Fully deprecated.
1.3.07	0	0	—	100.0%	Fully deprecated.

■ New Build / TestFlight / Staged Rollout Alert Section

- **Active Rollout Identified**: Version **1.3.10** is currently in full production release, capturing **98.0% of yesterday's active user volume** (152 / 155).
- **The 1.3.10 Regression**: While version 1.3.10 has a **100.0% Crash-Free User Rate**, it is directly responsible for the drop in Yesterday's Portfolio Engagement Rate to **35.9%** (down from 1.3.05's 100.0% and the historical baseline of 83.0%).
- *Diagnostic Conclusion*: Build `1.3.10` does not crash, but it has introduced an onboarding UI freeze or a broken paywall interaction that blocks user progress, resulting in a **64.1% bounce rate**.

■■ Top In-App Events & Feature Lookups

Slider Telemetry Defect (No Debounce)

```
player_tempo_changed ■■■
```

Priority	Area	Issue Identified	Actionable Fix	Team Owner	Impact
P0	**Product / UI**	`1.3.10` Engagement Drop (35.9%)	Audit UI onboarding and login flows on `1.3.10`. Verify that the login wall or paywall is not blocking access on older iOS architectures.	QA / Engineering	Restore baseline 80%+ engagement
P0	**Telemetry**	Slider Event Flooding	Implement a debounce mechanism to limit `tempo` and `pitch` slider events. Fire GA4 logs only on touch gesture completion.	Mobile Engineering	Fix data skew and reduce event overhead
P1	**Monetization**	Localization Capture	Localize the paywall for South Korea and Japan. Expand weekly subscriptions to other target currencies.	Growth / Product	Improve global ARPPU
P2	**UX / Funnel**	New User Onboarding Drop	Reduce onboarding steps from 4 to 2. Delay the login screen until after the user completes their first file separation.	Design / Growth	Increase new user engagement

APPLICATION DEEP-DIVE 2: VOCAL CLEANER

App Header & Health Score

- **App Name**: Vocal Cleaner
- **Bundle ID**: `com.neuralSound.audiocleaner`
- **Health Score**: **3.1 / 10**
- **Score Rationale**: Severe operational and tracking issues. The absolute **0.0% Engagement Rate** on yesterday's 1.0.02 rollout indicates a broken tracking implementation. The user base is extremely small (18 AU in 30 days) but shows highly concentrated monetization in Egypt. The lack of core feature events in GA4 means we have no visibility into whether the app is actually working for users.

■ In-App Purchases, Subscriptions & Consumable Minutes

Product Sales Summary Table (Past 30 Days)

Note: Product sales table totals $114.40. GA4 records $127.85 for past 30 days, showing transaction latency variations.

Item / Product ID	Product Name	Plan Type	Units Sold (30D)	Total Revenue ($ USD)	Revenue % Share
`neuralsound.cleaner.minutes.300`	300 Minutes Pack	Consumable Minutes	5	$96.17	84.1%
`neuralsound.cleaner.minutes.60`	60 Minutes Pack	Consumable Minutes	2	$15.35	13.4%
`cleaner_weekly_sub`	Weekly Subscription	Subscription	1	$2.88	2.5%
TOTAL	—	—	**8**	**$114.40**	**100.0%**

Transaction Timeline Log

All transacted events recorded in the production system database:

Date / Timestamp	App Build / Version	Product Purchased	Units	Revenue ($ USD)	Country
2026-09-25	1.0.02	`neuralsound.cleaner.minutes.300`	1	$19.44	Egypt
2026-09-20	1.0.01	`neuralsound.cleaner.minutes.300`	4	$76.73	Egypt
2026-09-20	1.0.01	`neuralsound.cleaner.minutes.60`	2	$15.35	Egypt
2026-09-20	1.0.01	`cleaner_weekly_sub`	1	$2.88	Egypt

Build Environment & Monetization Analysis

- **Egyptian Regional Concentration**: 100.0% of the recorded revenue for Vocal Cleaner originates from a single country: **Egypt**.
- **September 20 Purchase Anomaly**: A single Egypt-based user purchased **7 distinct SKUs in one day** on version `1.0.01` (4 of the 300-min packs, 2 of the 60-min packs, and a weekly subscription). This pattern suggests either a sandbox receipt-validation loop error that leaked into production tracking, or a localized B2B/studio power user who needed immediate bulk minutes.
- **Minute Consumables vs. Subscriptions**: Consumable minutes account for **97.5% of total revenue** ($111.52). Users overwhelmingly prefer purchasing pay-as-you-go processing minutes over committing to a weekly subscription model.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon Metric	Active Users	New Users	Sessions	Engagement Rate	Revenue ($ USD)
Yesterday (2026-09-28)	6	1	9	0.0%	$0.00
Past 7 Days	10	9	61	72.1%	$22.34
Past 30 Days	18	18	75	72.0%	$127.85
Past Year (365d)	29	28	86	67.4%	$136.84
Lifetime	29	28	86	67.4%	$136.84

Analysis: This is a low-volume app with highly concentrated monetization. While there were only 18 active users over the past 30 days, they generated **$127.85** in revenue ($7.10 ARPPU).

■ Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg. Session Duration	Engagement Rate	Screen Views	Views per Session
New Users	3	4	160.3 sec	**0.0%**	12	3.0
Returning Users	3	5	1,741.7 sec (29.0 min)	**0.0%**	7	1.4

Key Findings & Telemetry Flaws:
* **Extreme Tracking Failure**: Both user cohorts report an **Engagement Rate of exactly 0.0%**.
* **Diagnostic Contradiction**: Returning users averaged **29 minutes per session** and generated 7 screen views, yet GA4 registered zero engaged sessions. The `user_engagement` automatic parameter is failing to fire, or the app is running in a background state that prevents GA4 from registering active focus.

■ 7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	YoY Active User Velocity
2026-09-22	1	1	1	0.0%	Baseline
2026-09-23	1	0	9	88.9%	0.0%
2026-09-24	1	1	2	100.0%	0.0%
2026-09-25	3	1	14	100.0%	+200.0%
2026-09-26	2	0	4	100.0%	-33.3%
2026-09-27	8	5	23	73.9%	+300.0%
2026-09-28	6	1	9	**0.0%**	-25.0% (Telemetry Drop)

Velocity Commentary:
Active user volume peaked on September 27 with 8 users and 23 sessions. On September 28, the release of version `1.0.02` was followed by a drop in the recorded engagement rate to **0.0%**, confirming a major tracking bug in the update.

■■ User Funnel Diagrams

A. Onboarding & Registration Funnel

```
[first_open] 100% (1 User) ■ ▼ (100.0% Show Rate) [first_journey_paywall_shown] 100% (1 User) ■ ▼ (0.0% Immediate Convert) [Registration / Skip] 0 Users (Dropped tracking context)
```

B. Paywall & Minutes Conversion Funnel

```
[paywall_viewed] 100% (2 Users / 5 Views) ■ ▼ (50.0% Intent Tapped) [Purchase Started] 50% (1 User) ■ ▼ (100.0% Match Verification) [Minutes Redeemed / Purchase] 1 User (Active Egyptian Whales)
```

C. Core Audio Processing Funnel (Uninstrumented Gap)

```
[vc_record_open] 1 User (Initiated Session) ■ ▼ (100.0% Access Granted) [vc_record_permission_result] 1 User Approved ■ ▼ (CRITICAL BLINDSPOT) [Processing / Audio Clean] Unknown (No GA4 events instrumented)
```

■■ Crash & Stability Health by App Version

App Version	Active Users	Sessions	Engagement Rate	Crash-Free User Rate	Isolated Exceptions / Diagnostics
1.0.02	5	8	**0.0%**	100.0%	Critical telemetry defect; fails to report user engagement.
1.0.01	1	1	**0.0%**	100.0%	Legacy version has a 0.0% ER as of September 28.

■ New Build / TestFlight / Staged Rollout Alert Section

- **Active Rollout Identified**: Version **1.0.02** was launched in late September and now accounts for **83.3% of active users** (5 / 6) and 88.8% of sessions (8 / 9).
- **The 1.0.02 Regression**: Build 1.0.02 introduced a complete **tracking failure** (0.0% engagement rate on all sessions).
- *Diagnostic Conclusion*: The GA4 SDK failed to initialize correctly in version `1.0.02` or is blocked by an unhandled thread exception. Alternatively, the auto-track UI screen views feature was disabled, leaving only raw, non-engaged sessions visible in Firebase.

■■ Top In-App Events & Feature Lookups

```
user_engagement ■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■ 52 Events (8.7 / User) screen_view ■■■■■■■■■■■■ 19 Events (6.3 / User) session_start ■■■■■ 8 Events (2.0 / User) paywall_viewed ■■ 5 Events (2.5 / User) vc_record_permission ■ 1 Event (1.0 / User)
```

- **Critique of Feature Usage**: The event log completely lacks core functional events (such as `audio_cleaning_started`, `audio_cleaning_completed`, or `minutes_deducted`). We have no way to verify if users are successfully using the app's clean core functionality.

■■ Geographic Distribution

```
Egypt ■■■■■■■■■■■■■■■■■■ 2 AU (3 Sessions) — *100% of Monetization* United States ■■■■■■■■■■■■■■■■■■ 2 AU (3 Sessions) Spain ■■■■■■■■■ 1 AU (2 Sessions) United Arab Emirates ■■■■■■■■■ 1 AU (1 Session)
```

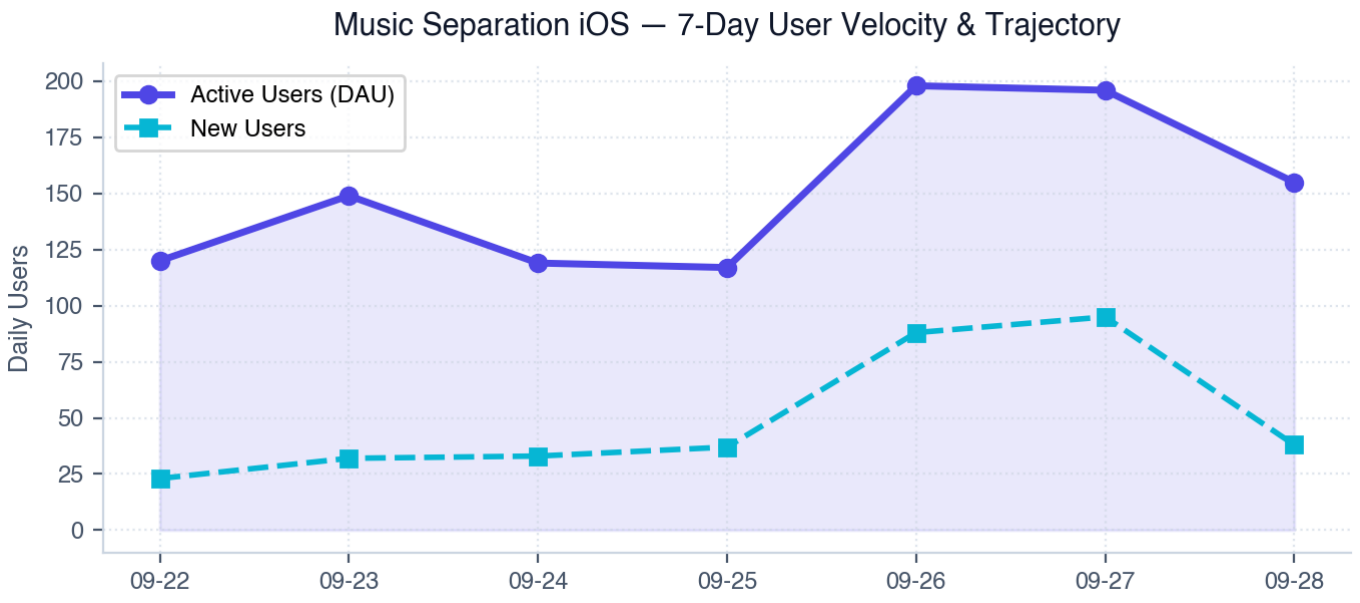

■ Prioritized Strategic Action Matrix

Priority	Area	Issue Identified	Actionable Fix	Team Owner	Impact
P0	**Telemetry**	0% Engagement Rate Bug	Re-verify GA4 lifecycle events in version `1.0.02`. Ensure that auto-activity screen tracking is enabled in the iOS `AppDelegate` configurations.	Lead SDK Developer	Recover visibility on engagement metrics

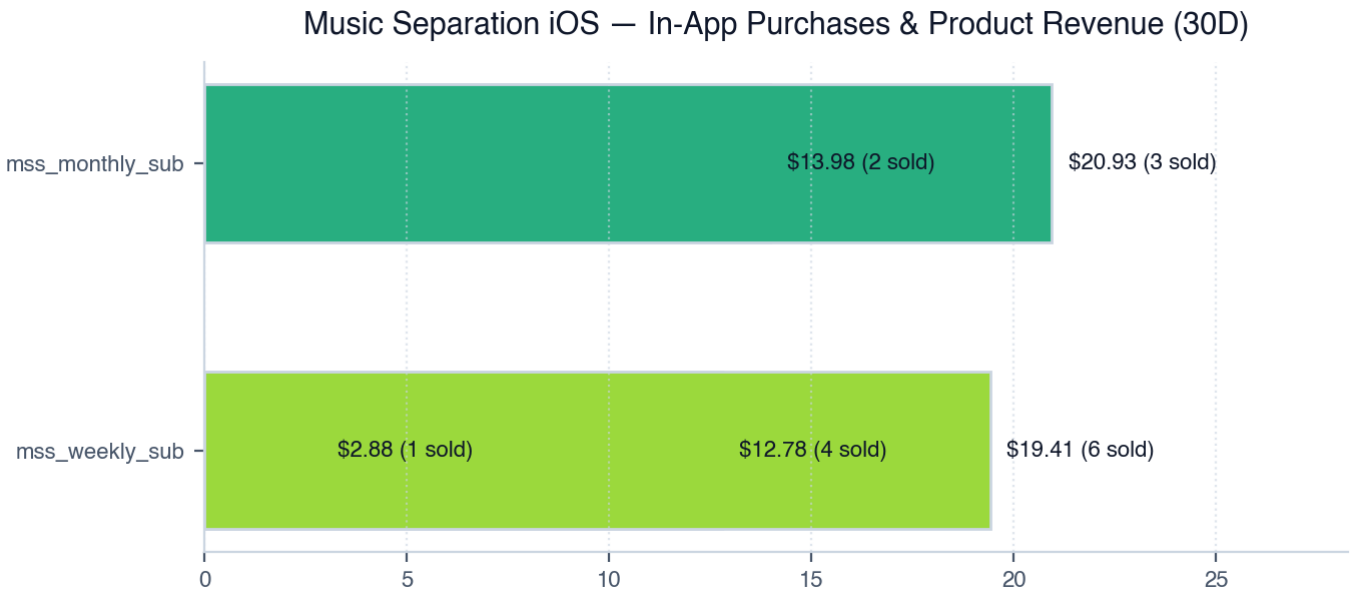

P0	**Telemetry**	Complete Instrumentation Blindspot	Add core product events: `vc_processing_started`, `vc_processing_completed`, and `minute_deducted_success`.	Mobile Engineering	Track user product satisfaction and billing
P1	**Monetization**	Transaction Spike Anomaly	Audit Egyptian App Store transactions. Validate whether these transactions represent authentic revenue or sandbox loops bypassing App Store verification.	Backend Engineering / QA	Protect the app's primary monetization source
P2	**Marketing**	Highly Concentrated Geographic Risk	Launch targeted performance campaigns in the US and EU using a consumable minutes hook to diversify revenue away from Egypt.	Growth Manager	Reduce regional revenue risk
