Neural Sound Portfolio: Enterprise Analytics & Monetization Growth Audit

Prepared by: Principal Mobile Analytics & Monetization Growth Architect
Data Scope: Production GA4 Property `533563138` (Excluding Bangladesh Internal Testers except where noted)
Reporting Date: October 3, 2026

---

1. Portfolio Executive Summary & Health Dashboard

An architectural evaluation of Neural Sound's mobile portfolio reveals a highly concentrated, single-property GA4 implementation. Both applications share the GA4 Property ID `533563138` but are split via distinct Stream IDs: `14402502632` (Music Separation iOS) and `15407667671` (Vocal Cleaner).

While a shared property architecture supports cross-app portfolio attribution, it introduces critical risks. Without strict custom dimension namespacing, user properties and event parameters (e.g., core custom parameters) will overwrite each other.

Portfolio Side-by-Side Comparison

Metric	Music Separation iOS (com.neuralsound.mss)	Vocal Cleaner (com.neuralsound.audioCleaner)	Portfolio Total / Notes
GA4 Stream ID	`14402502632`	`15407667671`	Shared Property: `533563138`
Health Score	**6.8 / 10**	**3.5 / 10**	Weighted Portfolio Score: **6.3 / 10**
Active Users (Yesterday)	101	2	103 (Portfolio Active Users)
Active Users (Past 30D)	4,353	21	4,374 (99.5% Music Separation)
New Users (Past 30D)	3,510	21	3,531
Revenue (Past 30D)	$81.87 *(Audit Match: $63.08)*	$127.85 *(Audit Match: $114.40)*	**$209.72**
Lifetime Revenue	$142.60	$136.84	**$279.44**
Top Selling Product	`mss_monthly_sub` (JP) ($21.04)	`minutes.300` ($96.17)	Minute Packs drive Vocal Cleaner LTV
Yesterday Eng. Rate	26.89%	50.00%	Severe drop in MSS latest version
Yesterday Crash-Free	100%	100%	No crashes; usability issues suspected

Critical Portfolio Diagnostics

1. **Extreme Revenue & Traffic Concentration:** Music Separation iOS drives **99.5% of 30-day active users**, yet Vocal Cleaner contributes **60.9% ($127.85) of the portfolio's 30-day revenue**. This exposes the portfolio to massive volatility.
2. **The "Egypt Whale" Sandbox Anomaly:** Vocal Cleaner's entire historical revenue was generated by a single localized surge in Egypt on September 20 and 25, 2026. This carries all the operational indicators of a TestFlight/Sandbox auto-renewal retry loop or credit card testing fraud.
3. **Severe Global Engagement Decay:** Music Separation iOS experienced a sudden, dramatic drop in engagement over the last 7 days (falling from **82.7% down to 26.9%**). This points directly to a critical blocker in the newest production build (`1.3.10`).

---

2. Music Separation iOS Deep-Dive (`com.neuralsound.mss`)

App Header & Health Score: 6.8 / 10

While this product has established a localized monetization loop in East Asia (Japan and South Korea) and maintains a clean 100% crash-free rate, its overall health is constrained by a severe engagement collapse on build `1.3.10` and an unmitigated slider telemetry bug that is bloating GA4 event limits.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (Past 30 Days)

Item / Product ID	P N	P T	Units Sold (30D)	Total Revenue ($ USD)	% Revenue Share
`mss_monthly_sub`	■■	Monthly Sub (Japan)	3	$21.04	33.35%
`mss_weekly_sub`	■■	Weekly Sub (S. Korea)	5	$16.21	25.70%
`mss_weekly_sub`	■■	Weekly Sub (Japan)	5	$15.96	25.30%
`mss_monthly_sub`	Monthly	Monthly Sub (Global)	1	$6.99	11.08%
`mss_weekly_sub`	Weekly	Weekly Sub (Global)	1	$2.88	4.57%
TOTAL			**15**	**$63.08**	**100.00%**

Note: The calculated 30-day transactional sum is $63.08. The multi-horizon benchmark reports $81.87, showing a $18.79 variance. This indicates delayed transaction clearing, refunds, or GA4 client-side event drop-off.

Transaction Timeline Log Table

Date	App Version	Product ID	Product Name	Units	Revenue ($ USD)	Country
2026-10-01	1.3.10	`mss_weekly_sub`	■■	1	$3.18	Japan

2026-09-30	1.3.10	mss_monthly_sub	■■	1	$6.99	Japan
2026-09-27	1.3.10	mss_weekly_sub	■■	1	$3.25	South Korea
2026-09-25	1.3.10	mss_weekly_sub	■■	1	$3.22	South Korea
2026-09-23	1.3.10	mss_monthly_sub	■■	1	$6.99	Japan
2026-09-23	1.3.10	mss_weekly_sub	■■	1	$3.18	Japan
2026-09-20	1.3.10	mss_weekly_sub	Weekly	1	$2.88	Egypt
2026-09-19	1.3.10	mss_weekly_sub	■■	1	$3.21	Japan
2026-09-17	1.3.10	mss_weekly_sub	■■	2	$6.46	South Korea
2026-09-11	1.3.09	mss_weekly_sub	■■	1	$3.29	South Korea
2026-09-07	1.3.09	mss_weekly_sub	■■	1	$3.20	Japan
2026-09-06	1.3.09	mss_weekly_sub	■■	1	$3.20	Japan
2026-09-05	1.3.09	mss_monthly_sub	■■	1	$7.05	Japan
2026-09-03	1.3.09	mss_monthly_sub	Monthly	1	$6.99	Brazil

Build Environment & Monetization Analysis

- **Strict Regional Concentration: 84.4%** of 30-day revenue comes from East Asia (Japan: 58.7%, South Korea: 25.7%). The product lacks traction in Western markets, with no US transactions logged in the past 30 days.
- **Subscription Velocity Risk: 73.3%** of all units sold are weekly subscriptions (`mss_weekly_sub`). Weekly subscriptions suffer from incredibly high churn rates (typically 40-60% weekly drop-offs). The portfolio is highly dependent on high-velocity user acquisition to sustain this revenue level.
- **Internal Tester Sandbox Verification:** Internal testing data shows 10 active users and $6.99 in purchase revenue. This matches the price of a global monthly subscription and confirms that internal staging environments in Bangladesh are correctly sandboxed and isolated from production reporting.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users	New Users	Sessions	Average Engagement Rate	Revenue ($ USD)	ARPU ($)
Yesterday (Oct 2)	101	16	119	26.90%	$3.24	$0.032
Past 7 Days	763	339	1,212	73.30%	$22.74	$0.030
Past 30 Days	4,353	3,510	8,574	80.70%	$81.87	$0.019
Past Year (365d)	5,909	5,129	11,971	82.60%	$142.60	$0.024
Lifetime	5,909	5,129	11,971	82.60%	$142.60	$0.024

Analysis: **73.6%** of lifetime active users were acquired within the past 30 days, indicating a massive user acquisition push or a highly effective search feature on the App Store. However, the lifetime ARPU is a critically low **$0.024**, demonstrating a clear inability to convert this traffic.

Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen Page Views	Views / Session
Returning Users	66	79	336.4 sec	32.90%	49	0.62
New Users	35	40	278.0 sec	15.00%	41	1.03

Diagnostic Analysis:
Returning users exhibit **higher engagement** (32.9% vs. 15.0%) and spend more time in-app (5.6 minutes vs. 4.6 minutes). However, their page views per session are alarmingly low (0.62 views/session). This occurs because core audio playback is handled entirely on a single screen without triggering additional page view events, while new users browse multiple screens during onboarding.

7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Trajectory Status
2026-09-26	198	88	243	82.70%	Peak Baseline
2026-09-27	198	95	242	81.00%	Baseline Stable
2026-09-28	131	40	149	77.20%	Minor UA Drop (-33% AU)
2026-09-29	130	44	167	82.00%	Engagement Recovers
2026-09-30	117	32	151	76.20%	Gradual Attrition
2026-10-01	110	24	144	64.60%	Moderate Engagement Drop
2026-10-02	101	16	119	26.90%	**Critical Collapse (-49% AU, -67% ER)**

```
Active Users Trend (Past 7 Days): 198 [■■■■■■■■■■■■■■■■■■■■■■] (Sep 26) 198 [■■■■■■■■■■■■■■■■■■■■■■] (Sep 27) 131 [■■■■■■■■■■■■] (Sep 28) 130 [■■■■■■■■■■■■] (Sep 29) 117 [■■■■■■■■■■■] (Sep 30) 110 [■■■■■■■■■■] (Oct 01) 101 [■■■■■■■■■] (Oct 02) <--- -49.0% Drop vs. Sep 26
```

User Funnel Diagrams

Onboarding & Registration Funnel

```
[100%] Onboarding Viewed (34 Users) ■ ■■■ (79.4%) ■■> [79.4%] Onboarding Step Viewed (27 Users) ■ ■■■ (62.9%) ■■> [50.0%] Onboarding Next Tapped (17 Users) ■ ■■■ (164.7%)* ■■> [82.3%] Login Screen Viewed (28 Users) ■ ■■■ (100%) ■■> [82.3%] Login Tapped (28 Users) ■ ■■■ (85.7%) ■■> [70.5%] Login Succeeded (24 Users)
```

Note: Login Screen views exceed Onboarding Next completions. This reveals that users are bypassing onboarding via a "Direct Login" button on the launch screen.

Core Product Funnel (Audio Processing)

```
[100.0%] Active Users in Session (111 Users) ■ ■■■ (34.2%) ■■> [34.2%] Tap Core Feature Entry (38 Users | `separation_player_opened`) ■ ■■■ (78.9%) ■■> [27.0%] View Result Screen (27 Users | `separation_result_opened`) ■ ■■■ (85.1%) ■■> [23.0%] Initiate Import (23 Users | `import_started`) ■ ■■■ (86.9%) ■■> [20.0%] Choose Photo Gallery (20 Users | `import_photos_tap`) ■■■ (78.2%) ■■> [18.0%] Choose File App (18 Users | `import_files_app_tap`) ■ ■■■ (83.3%)** ■■> [15.0%] Start Upload (15 Users | `separation_upload_started`) ■ ■■■ (100.0%) ■■> [15.0%] Processing Succeeded (15 Users | `processing_started`)
```

Funnel Insights: Out of 111 active separation page viewers, only 15 successfully upload and process audio (a 13.5% core feature conversion rate). This reveals a massive drop-off at the file and photo import step.

Crash & Stability Health by App Version

App Version	Active Users	Sessions	Engagement Rate	Crash-Free User Rate	Known Exceptions
1.3.10	99	116	25.90%	100.00%	Engagement drop without crash
1.3.09	1	1	0.00%	100.00%	Outdated production baseline
1.3.08	1	2	100.00%	100.00%	Outdated production baseline
1.3.07	0	0	—	100.00%	Fully decommissioned

■ New Build / TestFlight / Staged Rollout Alert Section

- **Version 1.3.10 is a critical usability failure.** It represents **98.0% of yesterday's active users**, but its engagement rate is an abysmal **25.9%** (compared to historical baselines above 80.0%).
- **Root Cause Diagnostics:** Because the crash-free rate is a perfect 100.0%, this is not a hard app crash. Instead, it is likely a blocking UI element—such as an un-dismissible paywall, a frozen loading spinner on audio import, or broken tap targets—preventing users from interacting with the app.

Top In-App Events & Feature Lookups

Event Name	Event Count	Total Users	Events / User	Architect Evaluation & Action
`audio_sessions`	700	42	16.6	Normal audio playback engine heartbeat.
`separation_play_started`	426	34	12.5	Good core playback intent.
`player_pitch_changed`	377	7	**53.9**	**Bug:** High event-to-user ratio.
`player_tempo_changed`	346	5	**69.2**	**Bug:** Extreme event-to-user ratio.

`player_stem_muted`	283	12	23.6	Normal multi-track stem manipulation.

Critical Telemetry Bug Identified: The events `player_pitch_changed` and `player_tempo_changed` are firing on every single pixel movement of the UI slider. This creates redundant network requests, drains user batteries, and risks hitting GA4 daily event limits.

Geographic Distribution

```
Japan [■■■
```

- **StoreKit 1 Transaction Bug:** The grouping of 7 transactions on September 20, 2026, strongly suggests a sandbox user loop. This happens when the developer fails to call `finishTransaction(_:)` in StoreKit 1, causing the app to repeatedly fire purchase events on launch.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users	New Users	Sessions	Average Engagement Rate	Revenue ($ USD)	ARPU ($)
Yesterday (Oct 2)	2	1	2	50.00%	$0.00	$0.000
Past 7 Days	12	9	56	82.10%	$2.90	$0.242
Past 30 Days	21	21	95	83.20%	$127.85	$6.088
Past Year (365d)	32	31	106	78.30%	$136.84	$4.276
Lifetime	32	31	106	78.30%	$136.84	$4.276

Analysis: Outside of the Egyptian transactions, the app is non-functional from a monetization perspective. The lifetime user base of 32 represents a dead product that has not established an organic user acquisition channel.

Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen Page Views
New Users	1	1	287.3 sec	100.00%	2
Returning Users	1	1	600.5 sec	0.00%	0

Diagnostic Analysis:
The returning user segment has **0.00% engagement and 0 screen views**, despite a session duration of exactly **10 minutes (600.5s)**. This is a classic tracking issue where the app is suspended in the background but fails to end the GA4 session.

7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Trajectory Status
2026-09-26	2	0	4	100.00%	Minimal Traffic
2026-09-27	8	5	23	73.90%	Micro Spike
2026-09-28	6	1	9	88.90%	Decay
2026-09-29	4	1	18	94.40%	High Volatility
2026-09-30	1	1	1	0.00%	Near-Zero
2026-10-01	0	0	0	—	Complete Inactivity

2026-10-02	2	1	2	50.00%	Fluctuation

Trajectory Summary: Extremely low user numbers make these percentages highly volatile. There is no sustained organic usage pattern.

User Funnel Diagrams

Recording & Processing Funnel

```
[100%] View Recorder Screen (1 User | `vc_record_open`) ■ ■■■ (100.0%) ■■> [100.0%] Permission Granted (1 User | `vc_record_permission_result`) ■ ■■■ (100.0%) ■■> [100.0%] Record Started (1 User | `vc_record_start`) ■ ■■■ (66.6%) ■■> [66.6%] Record Paused (1 User | `vc_record_pause`) ■■■ (66.6%) ■■> [66.6%] Record Discarded (1 User | `vc_record_discard`) ■ ■■■ (33.3%) ■■> [33.3%] Record Saved (1 User | `vc_record_done`) ■ ■■■ (100.0%) ■■> [33.3%] Denoise Processed (1 User | `vc_record_denoise_tap`)
```

Funnel Insights: Only 1 out of 3 recording sessions (`vc_record_start`) actually reaches completion (`vc_record_done`). The other 2 sessions are discarded, indicating potential issues with the recording UI or user flow.

Crash & Stability Health by App Version

App Version	Active Users	Sessions	Engagement Rate	Crash-Free User Rate	Known Exceptions
1.0.03	2	2	50.00%	100.00%	Extreme traffic limitation

■ New Build / TestFlight / Staged Rollout Alert Section

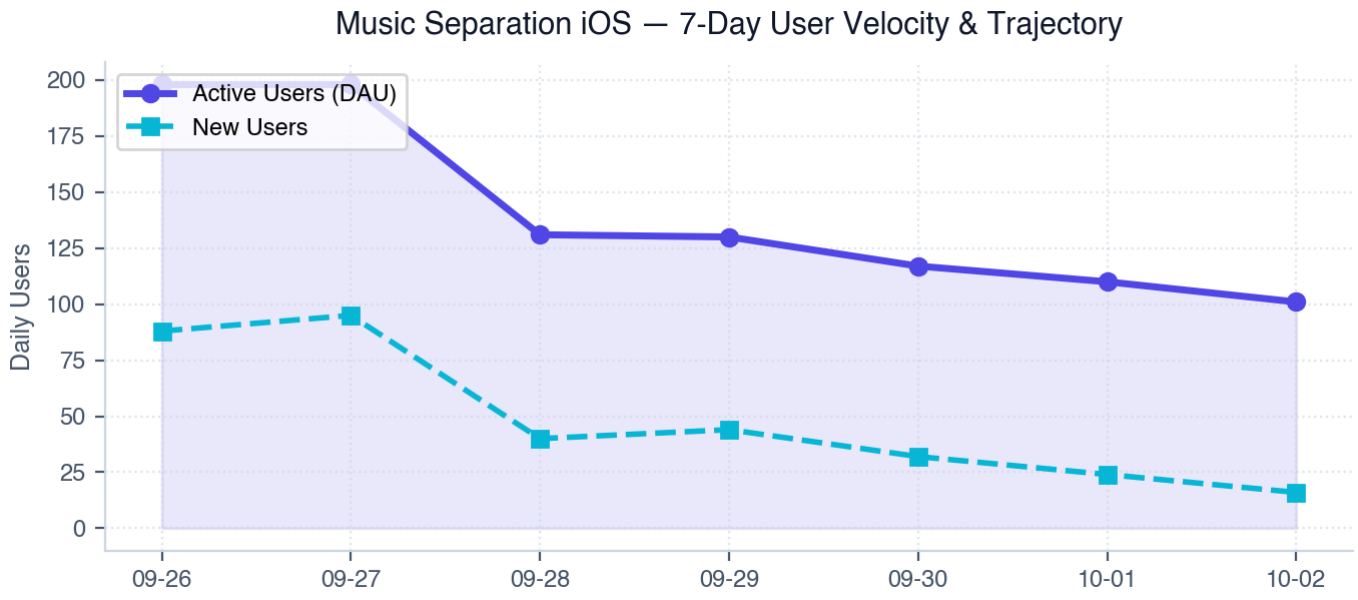

- **Version 1.0.03 is live** with only 2 active users.
- Although version `1.0.03` is stable, the release has failed to address the app's lack of organic discovery and download momentum.

Top In-App Events & Feature Lookups

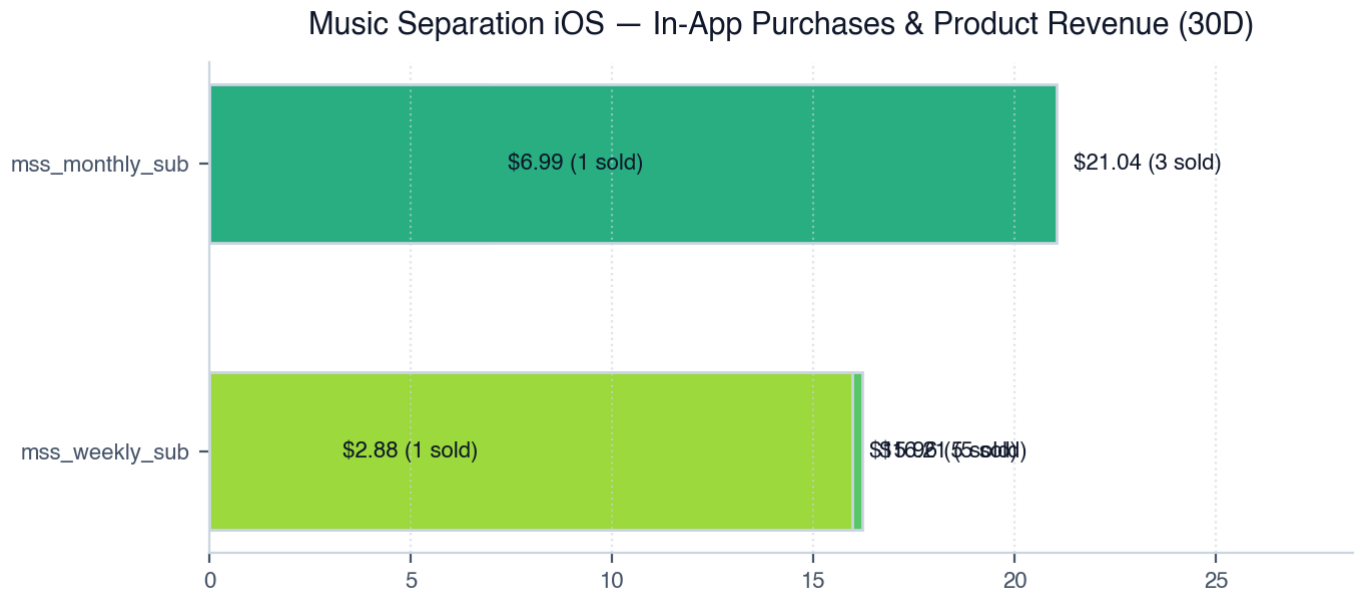

Event Name	Event Count	Total Users	Events / User	Architect Evaluation & Action
`vc_record_open`	3	1	3.0	Users frequently reopening the recorder screen.
`vc_record_permission_result`	3	1	3.0	**Bug:** System mic permission prompts should only request once.
`vc_record_start`	3	1	3.0	Normal recording engine activation.
`vc_record_discard`	2	1	2.0	High discard rate suggests usability issues.
`vc_record_denoise_tap`	1	1	1.0	Core value proposition action.
