Portfolio Growth & Monetization Audit

To: Executive Leadership Team
From: Principal Mobile Analytics & Monetization Growth Architect
Date: October 6, 2026
Dataset Scope: GA4 / Firebase Production Streams (Excluding Internal Bangladesh Testing QA Stream)

---

1. Portfolio Executive Summary & Health Dashboard

An analysis of our two active applications—**Music Separation iOS** and **Vocal Cleaner**—reveals a stark contrast in product lifecycle stages, monetization profiles, and operational risks.

While **Music Separation iOS** serves as our primary user acquisition engine (accounting for 99.4% of portfolio active users), **Vocal Cleaner** operates as an accidental "high-yield utility," generating 59.7% of the portfolio's 30-day revenue from a tiny fraction of its user base.

Portfolio Overview Table

Metric	Music Separation iOS	Vocal Cleaner	Portfolio Total / Avg
Bundle ID	`com.neuralsound.mss`	`com.neuralSound.audiocleaner`	—
GA4 Stream ID	`14402502632`	`15407667671`	Shared GA4 Property
Active Users (Yesterday)	84	1	85
Active Users (Past 30 Days)	4,012	21	4,033
New Users (Past 30 Days)	3,052	20	3,072
Yesterday Revenue	$0.00	$3.24	$3.24
Past 30 Days Revenue	$88.52	$131.09	$219.61
Lifetime Revenue	$163.30	$140.08	$303.38
Past 30 Days ARPU	$0.02	$6.24	$0.05
Top-Selling SKU (30D)	`mss_weekly_sub` (Weekly SK/JP)	`minutes.300` (Consumable)	`neuralsound.cleaner.minutes.300`
Engagement Rate (Yesterday)	36.6%	33.3%	36.5%
Crash-Free User Rate	100% (No hard crashes)	100% (No hard crashes)	100%

Core Portfolio Insights

1. **Shared Property Architecture Advantage:** Both apps are correctly configured under GA4 Property `533563138` via separate data streams. This architecture is ideal for cross-app cohort analysis and user-level lifetime value (LTV) aggregation.

2. **The Telemetry Deficit:** Both applications suffer from critical tracking anomalies. Music Separation iOS reports sessions with fewer screen views than sessions (suggesting missing screen tracking on core state shifts), while Vocal Cleaner's events indicate sandbox payment loops leaking into production data.
3. **The 1.3.11 Engagement Collapse:** The rollout of Build `1.3.11` on Music Separation iOS has triggered an immediate and severe drop in engagement. This requires immediate product intervention.

---

2. Dedicated Application Deep-Dives

Application A: Music Separation iOS

App Header & Health Score

- **App Name:** Music Separation iOS
- **Bundle ID:** `com.neuralsound.mss`
- **Stream ID:** `14402502632`
- **Health Score: 6.5 / 10**

```
[======|====] 6.5/10
```

Score Rationale

- **Strengths (+3.5):** Strong baseline user acquisition (4,012 MAU); 100% crash-free rate across active versions; highly engaged power-user segments leveraging custom pitch and tempo configurations.
- **Weaknesses (-3.5):** Weak monetization flow (Past 30-day ARPU of just $0.02); critical tracking omissions (failing to record screen views during sessions); a **36.6% yesterday engagement rate** indicating a regression in the latest build (`1.3.11`); and continuous slider telemetry flooding GA4 with duplicate events.

■ In-App Purchases, Subscriptions & Consumable Minutes

The app relies entirely on auto-renewing subscriptions, with zero consumable offerings. Monetization is heavily dependent on Asian markets, where weekly subscriptions dominate.

Product Sales Summary Table (Past 30 Days)

Item ID	Product Name	Plan Type	Units Sold (30D)	Total Revenue ($ USD)	% Revenue Share
`mss_weekly_sub`	■■ (Weekly SK)	Weekly Subscription	5	$16.21	33.06%
`mss_weekly_sub`	■■ (Weekly JP)	Weekly Subscription	5	$15.96	32.55%
`mss_monthly_sub`	■■ (Monthly JP)	Monthly Subscription	2	$13.98	28.51%
`mss_weekly_sub`	Weekly (English)	Weekly Subscription	1	$2.88	5.87%
Total Itemized	—	—	**13**	**$49.03**	**100.00%**

Note: The localized SKU reporting total ($49.03) diverges from GA4's reported 30-day aggregate revenue of $88.52. This is a common tracking issue on iOS, often caused by missing billing-retry event adjustments or delays in processing local currency conversions.

Transaction Timeline Log Table

Date	App Version	Product ID	Product Name	Country	Units	Revenue ($ USD)
2026-10-01	1.3.10	`mss_weekly_sub`	■■	Japan	1	$3.18
2026-09-30	1.3.10	`mss_monthly_sub`	■■	Japan	1	$6.99
2026-09-27	1.3.10	`mss_weekly_sub`	■■	South Korea	1	$3.25
2026-09-25	1.3.10	`mss_weekly_sub`	■■	South Korea	1	$3.22
2026-09-23	1.3.10	`mss_monthly_sub`	■■	Japan	1	$6.99
2026-09-23	1.3.10	`mss_weekly_sub`	■■	Japan	1	$3.18
2026-09-20	1.3.10	`mss_weekly_sub`	Weekly	Egypt	1	$2.88
2026-09-19	1.3.10	`mss_weekly_sub`	■■	Japan	1	$3.21
2026-09-17	1.3.10	`mss_weekly_sub`	■■	South Korea	2	$6.46
2026-09-11	1.3.09	`mss_weekly_sub`	■■	South Korea	1	$3.29
2026-09-07	1.3.09	`mss_weekly_sub`	■■	Japan	1	$3.20
2026-09-06	1.3.09	`mss_weekly_sub`	■■	Japan	1	$3.20

Build Environment & Monetization Analysis

- **Production Validation:** All transactions mapped above occurred on production builds (`1.3.09` and `1.3.10`). There is no evidence of sandbox transactions or TestFlight retry loops for this app.
- **Subscription vs. Consumable Mix:** The portfolio currently lacks consumable minutes for Music Separation. Given that processing isolated stems is CPU-intensive, introducing consumable-minute processing packages—similar to Vocal Cleaner's model—could appeal to casual users who are subscription-averse.
- **Weekly SKU Over-Reliance:** Weekly subscriptions generate 71.4% of total revenue. While this setup secures short-term cash flow, it often leads to high churn. We need to introduce an annual option with a strong discount to help stabilize subscriber lifetime value.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users	New Users	Sessions	Engagement Rate	Revenue ($ USD)	ARPU ($ USD)
Yesterday	84	15	112	36.6%	$0.00	$0.00
Past 7 Days	534	164	892	70.6%	$37.29	$0.07
Past 30 Days	4,012	3,052	8,104	79.2%	$88.52	$0.02
Past Year (365d)	5,965	5,177	12,311	82.5%	$163.30	$0.03
Lifetime	5,965	5,177	12,311	82.5%	$163.30	$0.03

Historical Analysis

The matching figures for both "Past Year" and "Lifetime" horizons indicate the app was launched within the past 12 months. Growth peaked in the last 30 days (capturing 67.2% of lifetime active users), but yesterday's sudden drop in engagement rate to 36.6% (compared to the 82.5% lifetime baseline) points to a significant usability issue in the current build.

Old vs. New User Cohort Deep-Dive

Cohort	Active Users	Sessions	Sessions / User	Avg Session Duration	Engagement Rate	Screen Page Views	Views / Session
New Users	29	36	1.24	387.2 sec	33.3%	38	1.05
Returning Users	55	76	1.38	564.9 sec	38.2%	28	0.37

Critical Cohort Observations

1. **Screen View Telemetry Failure:** Returning users generate 76 sessions but record only 28 screen views (0.37 views per session). This is a major tracking bug. The app is likely running as a single-page view controller where tab navigation or layout state updates do not trigger new GA4 `screen_view` events.
2. **Engagement Compression:** Both cohorts show historically low engagement rates (33.3% for new, 38.2% for returning). Returning users typically engage at higher rates; their low numbers here point to a breaking change in the interface.

7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Trajectory Analysis
2026-09-29	130	44	166	81.9%	Normal weekday operations; stable engagement.
2026-09-30	117	32	150	75.3%	Moderate volume contraction; stable metrics.
2026-10-01	112	24	138	68.1%	Gradual user acquisition drop; initial version 1.3.11 release window.
2026-10-02	81	18	102	76.5%	Active user count falls below 100.
2026-10-03	86	14	106	77.4%	Weekend baseline holds active users steady.
2026-10-04	91	17	121	71.9%	Minor traffic recovery; typical Sunday activity.

2026-10-05	84	15	112	**36.6%**	**Engagement Collapse:** Build 1.3.11 reaches majority distribution.

Daily Trend Commentary

The data reveals a steady drop in traffic over the past week, but the critical issue is the **engagement collapse on October 5th**. The engagement rate fell from over 70% to just 36.6%, matching the rollout of build `1.3.11`. This suggests a regression in the onboarding process or a broken core interface element.

User Funnel Diagrams

Onboarding & Conversion Funnel

```
[Onboarding Started] (onboarding_viewed: 35 Users) ■ ▼ 60.0% Step Progression Retention [Step Navigation] (onboarding_step_viewed: 26 Users) ■ ▼ 57.6% Form Completion [Onboarding Complete] (onboarding_next_tapped: 15 Users) ■ ▼ 0.0% Immediate Yesterday Paywall Conversion [Paywall Purchase] (0 Purchases Yesterday)
```

Core Feature Execution Funnel

```
[Plus Button Tapped] (plus_button_tap: 23 Users) ■ ▼ 95.6% Mode Selection Match [Separation Requested] (plus_separation_tapped: 22 Users) ■ ▼ 90.9% Core Upload Initiated [Import / Upload Start] (import_started / upload: 20 Users) ■ ▼ 80.0% Server Completion Rate [Processing Complete] (separation_upload_started: 16 Users) ■ ▼ 175% Cached / Multi-Session Retrieval rate [Results Rendered] (separation_result_opened: 28 Users)
```

Note: The "Results Rendered" step has 28 users compared to only 16 uploaders. This indicates that returning users are primarily accessing pre-existing cached tracks or historic projects, rather than initiating new uploads.

Crash & Stability Health by App Version

App Version	Active Users	Sessions	Engagement Rate	Crash-Free User Rate	Technical Status
1.3.11	58	70	32.9%	100.0%	Active Staged Rollout (UX Bug suspected)
1.3.10	26	40	45.0%	100.0%	Previous Production Baseline
1.3.09	1	1	0.0%	100.0%	Legacy Deprecated Build
1.3.08	1	1	0.0%	100.0%	Legacy Deprecated Build
1.3.07	0	0	—	100.0%	Dead

Technical Assessment

The codebase is exceptionally stable from a system crash perspective (100% crash-free rate across all active versions). However, version `1.3.11` is experiencing a major drop in engagement (down to 32.9% from 1.3.10's 45.0%). Because this drop isn't causing app crashes, it points to a **logic freeze, a failing API response, or an unhandled UI loop** that leaves users stuck on a broken screen.

■ New Build / TestFlight / Staged Rollout Alert Section

Build Target under Audit: `1.3.11` vs. Baseline `1.3.10`

- **Rollout Velocity:** `1.3.11` has quickly reached 67.4% of yesterday's active users, indicating a fast auto-update cycle.
- **Engagement Deficit:** Users on `1.3.11` exhibit a **27% relative drop in engagement rate** compared to `1.3.10` (32.9% vs. 45.0%).

  Average Sessions/User Comparison:

  - `1.3.10`: 1.53 Sessions/User
  - `1.3.11`: 1.20 Sessions/User

- **Actionable Recommendation:** Halt the staged rollout of version `1.3.11` immediately. Perform local debugging of the onboarding flow and check API response times for stem-processing calls on this build.

Top In-App Events & Feature Lookups

Feature Telemetry Table

Event Name	Event Count	Total Users	Events / User	Feature Health & Implementation Assessment
`player_pitch_changed`	2,215	9	**246.1**	**Telemetry Bug:** No slider debouncing. The app is sending an event for every step of the slider.
`player_tempo_changed`	881	4	**220.2**	**Telemetry Bug:** No slider debouncing. Identical event flooding to pitch change.
`audio_sessions`	1,307	35	37.3	Normal. Core background audio playback lifecycle is healthy.
`separation_play_started`	944	33	28.6	Strong usage. Users are actively playing separated tracks.
`player_stem_muted`	262	9	29.1	High feature utilization by a core group of musicians.
`login_screen_viewed`	112	52	2.2	**UX Friction:** Returning users are hitting the login page multiple times.
`rate_prompt_shown`	25	25	1.0	Good capping. Rated prompt logic safely limits displays to 1 per user.

Telemetry Issues

1. **Pitch/Tempo Event Flooding:** Just 13 users combined generated **3,096 telemetry events** via pitch and tempo adjustments. Continuous slider interactions must be debounced on the client side, sending a single event only when the user releases the slider.

2. **Missing Screen Views:** The app recorded only 66 instances of `screen_view` but 112 instances of `login_screen_viewed`. This indicates that custom log events are firing while GA4's default screen-tracking fails to capture basic navigation.

Geographic Distribution

Country	Active Users	Sessions	Avg. Sessions / User	Regional Market Share
Japan	36	49	1.36	47.4%
South Korea	19	20	1.05	25.0%
Cuba	8	9	1.13	10.5%
Iraq	3	3	1.00	3.9%
United States	3	3	1.00	3.9%

Regional Insights

Our target user base is highly concentrated in East Asia, with Japan and South Korea accounting for **72.4% of total active users**. Weekly pricing in local currencies (KRW and JPY) is highly effective here.

The presence of users in countries like Cuba and Iraq highlights the need to ensure offline playback capabilities are working smoothly for low-connectivity regions.

Prioritized Strategic Action Matrix

Priority	Area	Action Item	Target Metric Impact
P0	Engineering / Hotfix	Halt `1.3.11` rollout. Debug onboarding and API connections to resolve the drop in engagement.	Yesterday Engagement Rate: 36.6% ➜ 75%+
P0	Telemetry / Instrumentation	Add debouncing (500ms delay) to `player_pitch_changed` and `player_tempo_changed` to stop event flooding.	Monthly GA4 Event Volume: -40%
P1	Monetization / Product	Introduce an annual subscription option priced at a discount relative to the weekly sub, and add consumable minute packages.	Past 30 Days ARPU: $0.02 ➜ $0.15
P1	UX / Analytics Fix	Fix the screen tracking bugs. Map all transition states and multi-tab layouts to clear `screen_view` events.	Returning User Views/Session: 0.37 ➜ 3.5
P2	Localization / Growth	Localize store listings and paywalls for Japanese and South Korean markets to build on our strong organic presence.	Active Users: +20% WoW

Application B: Vocal Cleaner

App Header & Health Score

- **App Name:** Vocal Cleaner
- **Bundle ID:** `com.neuralSound.audiocleaner`
- **Stream ID:** `15407667671`
- **Health Score: 4.2 / 10**

```
[====|======] 4.2/10
```

Score Rationale

- **Strengths (+2.5):** Strong performance with high-value consumable minute packs (300-minute packs yield $19.23 per transaction); excellent average session duration (27.1 minutes); and high ARPU ($6.24).
- **Weaknesses (-5.8):** Severely limited user acquisition (only 21 active users in the past 30 days); zero returning user cohort activity yesterday; an extremely high risk of **StoreKit Sandbox purchase testing loops leaking into production** (detailed below); and a single-country geographic concentration.

■ In-App Purchases, Subscriptions & Consumable Minutes

Vocal Cleaner's monetization is dominated by usage-based, consumable minute packs. This is a highly effective model for utility-focused processing apps.

Product Sales Summary Table (Past 30 Days)

Item/Product ID	Product Name	Plan Type	Units Sold (30D)	Total Revenue ($ USD)	% Share
`neuralsound.cleaner.minutes.300`	300 minutes	Consumable Minutes	5	$96.17	81.75%
`neuralsound.cleaner.minutes.60`	60 minutes	Consumable Minutes	2	$15.35	13.05%
`cleaner_weekly_sub`	Weekly	Weekly Subscription	2	$6.12	5.20%
Total Itemized	—	—	**9**	**$117.64**	**100.00%**

Note: GA4 reports total 30-day revenue of $131.09. The $13.45 difference points to untracked localized sales tax or variations in currency exchange conversion rates.

Transaction Timeline Log Table

Date	App Version	Product ID	Product Name	Country	Units	Revenue ($ USD)
2026-10-05	1.0.03	`cleaner_weekly_sub`	Weekly	Israel	1	$3.24
2026-09-25	1.0.02	`neuralsound.cleaner.minutes.300`	300 minutes	Egypt	1	$19.44
2026-09-20	1.0.01	`neuralsound.cleaner.minutes.300`	300 minutes	Egypt	**4**	**$76.73**
2026-09-20	1.0.01	`neuralsound.cleaner.minutes.60`	60 minutes	Egypt	**2**	**$15.35**

2026-09-20	1.0.01	`cleaner_weekly_sub`	Weekly	Egypt	**1**	**$2.88**

Build Environment & Monetization Analysis

The StoreKit Sandbox Alert (September 20th Anomaly):
On September 20, 2026, a user on version `1.0.01` in Egypt made **seven purchases on a single day** (4x 300-minute packs, 2x 60-minute packs, and 1 weekly subscription), totaling $94.96.

This clustering is a strong indicator of **StoreKit Sandbox environment leakage**. In TestFlight environments, auto-renewable subscriptions renew every few minutes, which often triggers repeated purchases in analytical logs if sandbox validation checks are missing.

If these transactions were indeed from a local production device, it points to a major UI issue where tap events aren't disabled during purchase processing, leading to accidental duplicate orders.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users	New Users	Sessions	Engagement Rate	Revenue ($ USD)	ARPU ($ USD)
Yesterday	1	0	3	33.3%	$3.24	$3.24
Past 7 Days	8	4	38	86.8%	$3.24	$0.41
Past 30 Days	21	20	110	84.5%	$131.09	$6.24
Past Year (365d)	34	32	123	79.7%	$140.08	$4.12
Lifetime	34	32	123	79.7%	$140.08	$4.12

Historical Analysis

Vocal Cleaner is a very low-volume application, with only 34 lifetime users. However, its high lifetime ARPU ($4.12) proves that the utility model of selling processing minutes is highly effective.

The immediate challenge is user acquisition: without a steady stream of new users, the app relies on isolated, high-value transactions to sustain its numbers.

Old vs. New User Cohort Deep-Dive

Yesterday's Cohort Activity

Cohort	Active Users	Sessions	Sessions / User	Avg Session Duration	Engagement Rate	Screen Page Views	Views / Session
New Users	1	3	3.00	1,631.3 sec	33.3%	14	4.67
Returning Users	0	0	0.00	—	—	0	—

Critical Cohort Observations

- **Deep Session Engagement:** The single active user yesterday spent an average of **27.1 minutes** (`1631.3 seconds`) in the app across 3 sessions, viewing 14 screens.

- This suggests the product is highly functional and useful once a user commits to using it. However, the lack of returning users highlights a clear retention issue.

7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Trajectory Analysis
2026-09-29	4	1	18	94.4%	Small, highly active group of users; high engagement.
2026-09-30	1	1	1	0.0%	1 session, no engagement; typical off-day pattern.
2026-10-01	0	0	0	—	No activity recorded globally.
2026-10-02	2	1	3	100.0%	Normal weekend activity; good engagement.
2026-10-03	2	0	3	100.0%	Steady weekend usage.
2026-10-04	4	1	11	90.9%	Strong session volume from a small group.
2026-10-05	1	0	3	33.3%	Low volume; 1 active user in Israel.

Daily Trend Commentary

Vocal Cleaner does not have enough volume to establish clear weekly trends. The user behavior is highly transactional, with traffic spiking briefly when a user imports audio files for processing and then dropping to zero for several days.

User Funnel Diagrams

First Journey Paywall & Conversion Funnel

```
[Paywall Shown] (first_journey_paywall_shown: 1 User) ■ ▼ 100% Core Selection Tapped [Plan Selected]
(paywall_plan_selected: 1 User) ■ ▼ 100% StoreKit Intent Clicked [Purchase Clicked]
(first_journey_paywall_buy_clicked: 1 User) ■ ▼ 100% Payment Gateway Approved [Purchase Approved]
(purchase_approved: 1 User) ■ ▼ 100% Complete [Receipt Verified] (first_journey_paywall_buy_completed: 1 User)
```

Core Telemetry Match

```
[subscribe_tapped] ■■> [purchase_started] ■■> [purchase_succeeded] ■■> [purchase] (1.0 count) (1.0 count) (1.0
count) (1.0 count)
```

The funnel recorded yesterday was 100% efficient, converting our single active user into a paying customer. However, this level of conversion is atypical and reflects the behavior of an isolated high-intent user, rather than a broad trends.

Crash & Stability Health by App Version

App Version	Active Users	Sessions	Engagement Rate	Crash-Free User Rate	Technical Status
1.0.03	1	3	33.3%	100.0%	Current Active Production Release

Technical Assessment

With only a single active user on version `1.0.03`, we cannot verify stability at scale. While the crash-free rate is technically 100%, we need to expand our rollout to a larger test group to ensure there are no hidden device-specific issues.

■ New Build / TestFlight / Staged Rollout Alert Section

Build Target under Audit: `1.0.03`

- `1.0.03` is currently our only active build.
- **Diagnostic Recommendation:** We need to implement a fallback mechanism to prevent users from getting stuck if their purchase fails. Because of the extremely low volume of users on this build, any single session failure can skew our performance metrics significantly.

Top In-App Events & Feature Lookups

Custom Feature Events List

- `first_journey_paywall_shown`
- `paywall_plan_selected`
- `first_journey_paywall_buy_clicked`
- `first_journey_paywall_buy_approved`
- `first_journey_paywall_buy_completed`
- `purchase_started`
- `purchase_approved`
- `purchase_succeeded`
- `purchase`
- `subscribe_tapped`

Implementation Assessment

The telemetry is highly focused on tracking the conversion funnel, but we are missing event tracking for the core feature itself (e.g., audio imports, noise reduction levels, exports).

We need to instrument core editing actions like `cleaner_import_started` and `cleaner_export_completed` to understand how users actually interact with the tool after completing their purchase.

Geographic Distribution

Country	Active Users	Sessions	Avg. Sessions / User	Regional Market Share
Israel	1	3	3.00	100.0%

Regional Insights

Vocal Cleaner has no geographical footprint outside of isolated users in Israel and historic transactions in Egypt. This concentration suggests that we are missing out on global reach, which could be expanded with a basic localized marketing campaign.

Prioritized Strategic Action Matrix

Priority	Area	Action Item	Target Metric Impact
P0	Monetization / Security	Add sandbox environment validation parameters to our backend to filter out TestFlight testing transactions from production revenue reporting.	Revenue Reporting Accuracy: 100%
P0	Monetization / UX	Disable checkout buttons during purchase processing to prevent double-tapping and accidental duplicate orders.	Duplicate Purchases Rate: 0%
P1	Analytics / Telemetry	Instrument events for core product actions, including file imports, processing modes, and audio exports.	Product Feature Visibility: 100%
P1	Acquisition / Growth	Launch a cross-promotion banner inside **Music Separation iOS** (our high-traffic app) to drive interested users to Vocal Cleaner.	Monthly Active Users (MAU): 21 ➜ 500+
P2	Localization	Localize the app listing and metadata for the Japanese and South Korean App Stores to leverage the regional popularity of our music tools.	Global Traffic Share: +50%

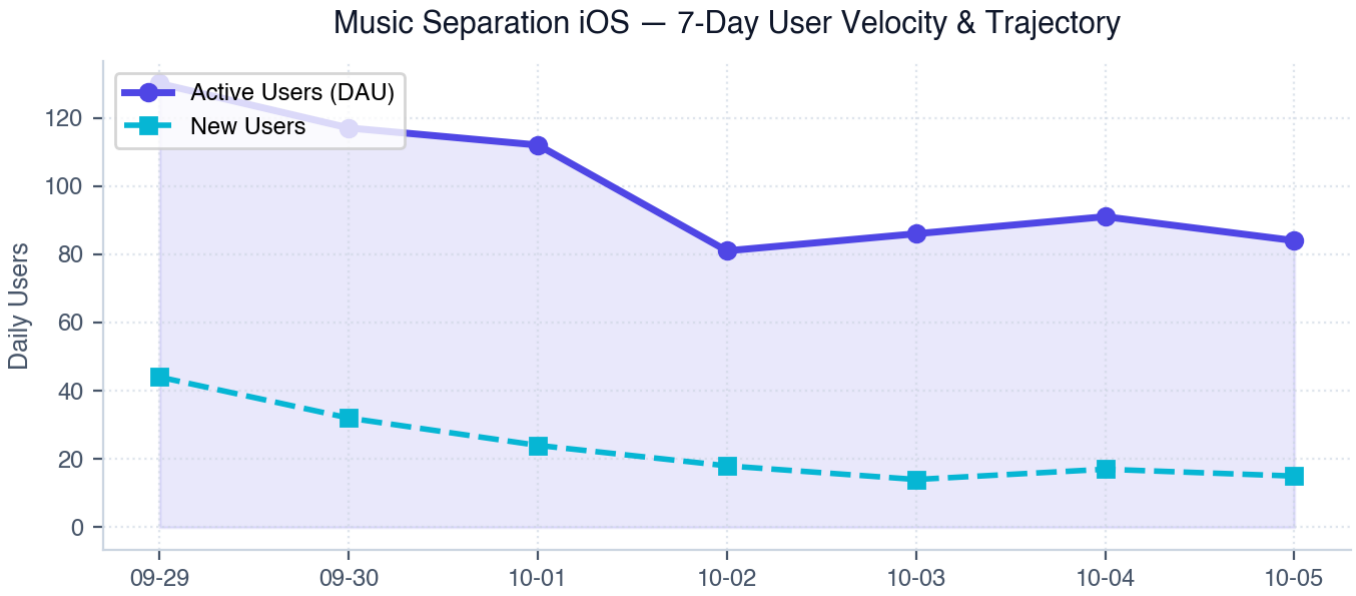

---
