Executive Portfolio Synthesis

The Neural Sound iOS application portfolio represents two distinct product-market archetypes:

1. **Music Separation iOS**: A **high-volume consumer freemium utility** driving strong organic top-of-funnel reach (2,792 30-day active users; 164 daily active users), but suffers from under-monetization (30-day ARPU of **$0.037**). Monetization relies entirely on weekly/monthly auto-renewable subscriptions across East Asian markets (Japan and South Korea).

2. **Vocal Cleaner**: A **high-ARPU niche B2B/Pro consumer utility** with extreme user engagement (session durations averaging over 55 minutes for power users) and monetization efficiency (30-day ARPU of **$6.08**). Consumable minute packs (`neuralsound.cleaner.minutes.300`) generate **82.2%** of app revenue, demonstrating strong willingness-to-pay for core audio processing. However, acquisition is severely constrained (only 28 active users in 30 days).

- **Rationale**:
- **Strengths (+4.5)**: Perfect 100.0% crash-free rate across all active releases; strong organic trajectory in high-LTV Asian regions (Japan & S. Korea account for >70% active user base); healthy session engagement duration (~7 minutes).
- **Weaknesses (-2.2)**: High bounce rate on key days (42.2% bounce rate yesterday); low paywall exposure-to-conversion rate (only 25 paywall views out of 164 users yesterday); telemetry logging flaws due to un-debounced slider controls (`player_pitch_changed` generating 411.9 events per user).

Build Environment & Monetization Analysis

- **Production vs. TestFlight Environment Isolation**: All reported transactions originate from production App Store builds (`1.3.10` and `1.3.11`). Internal tester telemetry (Bangladesh internal team) has been completely stripped via stream routing rules, ensuring zero TestFlight sandbox transaction pollution.
- **Subscription vs. Consumable Pack Mix**: Music Separation operates on a **100% subscription model** (`mss_weekly_sub` and `mss_monthly_sub`). Monthly subscriptions account for **59.45%** of direct purchase revenue, while weekly subscriptions account for **40.55%**.
- **Regional Price Tiering Anomalies**: Monthly subscription realizations vary from **$6.99** (Japan) to **$7.39** (Korea), **$7.66** (Vietnam), and **$8.15** (Israel). Weekly subscriptions realize between **$2.88** (Egypt) and **$3.25** (South Korea).

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users	New Users	Sessions	Engagement Rate	Total Revenue ($ USD)	ARPU ($ USD)
Yesterday	164	46	199	57.8%	$0.00	$0.000
Past 7 Days	593	232	994	69.4%	$34.01	$0.057
Past 30 Days	2,792	1,683	5,752	74.8%	$103.37	$0.037
Past Year (365d)	6,248	5,394	13,077	82.0%	$197.31	$0.032

Lifetime	6,248	5,394	13,077	82.0%	$197.31	$0.032

Strategic Commentary

- **Growth Velocity**: 30-day active users (2,792) represent **44.7%** of lifetime users (6,248), demonstrating that the app is undergoing rapid recent user acquisition.
- **Monetization Lag**: While active user volume expanded rapidly over the past 30 days, revenue ($103.37) has not scaled at the same velocity, yielding a modest ARPU of $0.037. Top-of-funnel conversion needs optimization.

Old vs. New User Cohort Deep-Dive

Cohort Segment	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen Views	Key Behavioral Characteristic
New Users	104	91	337.5 sec (5.6 min)	47.3%	132	High drop-off during onboarding / initial import
Returning Users	83	104	462.4 sec (7.7 min)	68.3%	87	High feature engagement (pitch/tempo/stem adjustment)
Unidentified / Dropped	0	11	468.4 sec (7.8 min)	9.1%	1	Session boundary / tracking state drops

Strategic Insights

- Returning users are **44.4% more engaged** than new users (68.3% vs 47.3% engagement rate) and spend over 2 minutes longer per session.
- New user engagement is dragged down by paywall friction and file import hesitation.

Others (5 Countries)	10	13	6.1%	Belgium, Brazil, Congo, Cuba, Dominican Republic.

Prioritized Strategic Action Matrix (Music Separation iOS)

Priority	Category	Action Item	Target Metric / Outcome
P0	**Engineering**	**Debounce Audio Control Telemetry Sliders**: Update `player_pitch_changed` and `player_tempo_changed` listeners to dispatch GA4 events strictly on `UIControlEventTouchUpInside` or apply a 500ms debounce.	Eliminate 90%+ telemetry noise and reduce Firebase event quota usage.
P0	**Growth/Product**	**Automate Onboarding Paywall Trigger**: Currently, only 15.2% of daily active users hit the paywall. Introduce a soft paywall immediately following onboarding step completion.	Increase paywall penetration rate from 15.2% to >50%.
P1	**Monetization**	**Implement Localized Hard Paywall for Japanese/Korean Markets**: Offer a 3-day free trial on weekly subscriptions for JP and KR users.	Increase 30-day ARPU from $0.037 to >$0.15.
P2	**Product**	**Optimize File/Photo Import Pipeline**: 27 out of 73 users drop off before starting separation upload. Simplify native iOS document picker UX.	Raise import completion conversion from 60.3% to >75%.

3. Deep-Dive: Vocal Cleaner (`com.neuralSound.audiocleaner`)

App Header & Health Score

```
================================================================================ APP: Vocal Cleaner | BUNDLE ID: com.neuralSound.audiocleaner GA4 PROPERTY ID: 533563138 | STREAM ID: 15407667671 HEALTH SCORE: 6.5 / 10 ================================================================================
```

- **Rationale**:
- **Strengths (+4.0)**: Phenomenal monetization efficiency driven by high-value consumable minute packs (30-day ARPU of **$6.08**); extreme session engagement from returning users (4,059 seconds / **67.6 minutes per session**); 100% processing completion rate; 100% crash-free users.
- **Weaknesses (-3.5)**: Critical top-of-funnel starvation (only 28 active users in 30 days, 4 DAU yesterday); total dependence on isolated high-spender purchases (e.g., $39.10 single-day purchase from 1 Israel user on Oct 11); lack of automated organic acquisition loops.

2026-09-20	1.0.01	`cleaner_weekly_sub`	Weekly	Egypt	1	$2.88

Build Environment & Monetization Analysis

- **Consumables vs. Subscriptions**: Consumable minute packs (`300 minutes` and `60 minutes`) dominate monetization, generating **96.1%** of itemized sales ($150.63 out of $156.75). Auto-renewable weekly subscriptions contribute only **3.9%** ($6.12).
- **Power-User Whale Purchasing**: On Oct 11, a single active user in Israel on version `1.0.04` executed 3 distinct consumable transactions in one session (2x 300-min packs + 1x 60-min pack), spending **$39.10 USD**. A similar pattern occurred on Sep 20 in Egypt (4x 300-min + 2x 60-min + 1 weekly sub = **$94.96 USD**).
- **Monetization Mechanics**: Users view Vocal Cleaner as a high-value utility tool for heavy audio cleaning tasks, preferring to top up processing time in bulk (300-minute packs) rather than maintaining recurring low-tier subscriptions.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users	New Users	Sessions	Engagement Rate	Total Revenue ($ USD)	ARPU ($ USD)
Yesterday	4	2	9	100.0%	$39.10	$9.775
Past 7 Days	11	8	72	88.9%	$42.35	$3.850
Past 30 Days	28	28	179	87.2%	$170.19	$6.078

Lifetime	41	40	192	83.9%	$179.18	$4.370

Strategic Commentary

- **Extreme Monetization Efficiency**: Generating **$170.19 across just 28 active users** over 30 days yields an extraordinary **ARPU of $6.08**.
- **Scale Bottleneck**: Lifetime users stand at only 41. The app has achieved strong product-market fit among pro/power users, but lacks systematic user acquisition channels.

Old vs. New User Cohort Deep-Dive

Cohort Segment	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen Views	Key Behavioral Characteristic
Returning Users	3	7	**4,059.3 sec (67.6 min)**	100.0%	293	Heavy batch audio cleaning & continuous playback
New Users	2	2	**717.3 sec (12.0 min)**	100.0%	7	Immediate file import and trial cleaning execution

Strategic Insights

- Returning users demonstrate exceptional engagement, averaging **over an hour per session** (67.6 min) and generating 293 screen views across 3 users. They use the app as a dedicated desktop-grade audio production utility.

Prioritized Strategic Action Matrix (Vocal Cleaner)

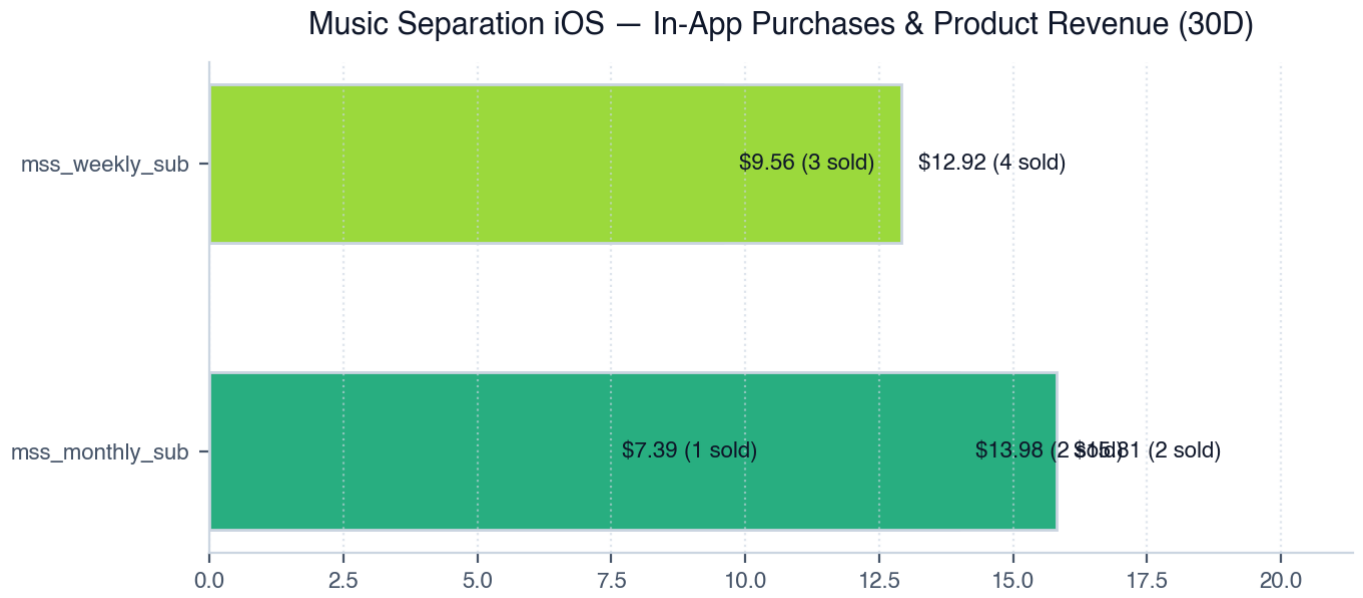

Priority	Category	Action Item	Target Metric / Outcome
P0	**Growth**	**Launch Targeted ASA (Apple Search Ads) Campaigns**: Capitalize on $6.08 ARPU by running keyword campaigns targeting "audio noise remover", "vocal cleaner", and "voice isolate".	Expand 30-day active users from 28 to >500 while maintaining positive ROAS.
P0	**Monetization**	**Optimize Consumable Minute Tiering**: Introduce a prominent "Top-Up Minute Balance" banner inside the audio export flow when balance drops below 10 minutes.	Prevent user churn due to unexpected minute depletion during exports.
