Executive Portfolio Takeaways

1. **Monetization Divergence (High Volume Subscriptions vs. Whale Consumable Packs):**
2. **Music Separation iOS** functions as a high-engagement SaaS utility (7.26 min/session), deriving **100% of its revenue from recurring subscriptions** (Weekly/Monthly), with Japan and South Korea generating over 60% of total revenue.

   Vocal Cleaner exhibits a "whale" monetization structure. Despite a tiny user base (30 active users in 30 days), it generates a 30-day ARPU of **$6.09**—112x higher than Music Separation ($0.054)—driven almost entirely (**96.1%**) by **300-minute consumable packs** purchased by audio professionals in Egypt and Israel.

Top-of-Funnel Acquisition Bottleneck:

Both applications experienced steep user velocity drops over the last 7 days. Music Separation dropped from 183 AU (Oct 12) to 45 AU (Oct 18). Vocal Cleaner collapsed from 7 AU (Oct 12) to 1 AU (Oct 18). Paid/organic acquisition levers are underperforming or off.

Critical Telemetry Debt Identified:

7. Music Separation has continuous UI slider events (`player_pitch_changed` at **183.7 events/user** and `player_tempo_changed` at **96.5 events/user**) firing un-debounced. This inflates GA4 log volume, risks quota throttling, and skews event analytics.

2. Application Deep-Dive: Music Separation iOS

App Header & Health Score

```
App Name: Music Separation iOS Bundle ID: com.neuralsound.mss | Stream ID: 14402502632 | Property ID: 533563138
Current Production Baseline: Version 1.3.11
```

Health Score: 8.1 / 10

- **Rationale:** Exceptional engagement retention (75%+ engagement rate across all horizons), robust session depth (7.26 mins/session), 100% crash-free rate on `1.3.11`, and steady localized subscription conversions in Japan/Korea. Deductions applied for:
- High telemetry event spam due to un-debounced player control sliders.
- Severe onboarding/login funnel friction (64 screen views vs. 13 completed logins).
- Sharp 7-day user drop-off (-75.4% week-over-week).

- **Insight:** Returning users generate 76.5% of active daily sessions with a higher engagement rate (79.5% vs. 66.7%). New users consume more screens per session (2.25 vs 0.53), reflecting exploration/onboarding navigation.

7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Visual Velocity Trend
2026-10-12	183	68	233	78.5%	■■■■■■■■■■■■■■■■■■■■ (Peak)
2026-10-13	124	49	165	77.0%	■■■■■■■■■■■■■

2026-10-18	45	8	53	75.5%	■■■■■ (Current Low)

- **Trend Commentary:** Trajectory exhibits an explicit decay curve over the 7-day period. Active users dropped by 75.4% from Oct 12 to Oct 18. New acquisition dropped from 68/day to 8/day (-88.2%), pointing to an organic campaign or paid UA exhaustion mid-week.

Strategic Action Matrix: Music Separation iOS

Priority	Category	Issue / Opportunity	Specific Engineering / Growth Action
P0	**Engineering / Telemetry**	UI Slider Event Flooding	Implement a **300ms debounce buffer** or move `player_pitch_changed` and `player_tempo_changed` telemetry events exclusively to slider touch-release callbacks.
P1	**Growth / Monetization**	High JP/KR Subscriber Demand	Introduce **Localized Annual Subscription Tiers** in Japan (e.g., ¥6,800/yr) and South Korea to lock in LTV. Add native Paywall localization.
P2	**Product / UX**	Onboarding Login Drop-off	Implement **Sign in with Apple** one-tap authorization on `login_screen_viewed` to reduce the 68.6% drop-off rate before core feature entry.

3. Application Deep-Dive: Vocal Cleaner

App Header & Health Score

```
App Name: Vocal Cleaner Bundle ID: com.neuralSound.audiocleaner | Stream ID: 15407667671 | Property ID: 533563138
Current Production Baseline: Version 1.0.04
```

Health Score: 6.8 / 10

- **Rationale:** Incredible monetization efficiency ($6.09 30-day ARPU driven by $18.50+ average order values on consumable packs), high engagement rate (89.8%+ 30D), and 100% crash-free build. Heavily penalized for:
- Near-zero top-of-funnel user volume (1 active user yesterday; 30 past 30D).
- Complete failure of weekly subscriptions to convert relative to consumable minute packs.
- Single-market concentration vulnerability (Egypt & Israel represent 100% of revenue).

Prioritized Strategic Action Matrix: Vocal Cleaner

Priority	Category	Issue / Opportunity	Specific Engineering / Growth Action
P0	**Growth / Acquisition**	Severe Volume Bottleneck	Launch targeted Search Ads (Apple Search Ads / Google App Campaigns) targeting audio professionals, podcasters, and studio engineers in MENA and Europe.
P1	**Monetization Architecture**	High Consumable Preference	Redesign Paywall to prioritize **Consumable Packs** over subscriptions. Add an **Enterprise 1,000-Minute Pack** ($49.99) and implement an **Auto-Refill Prompt** when user balance drops below 10 minutes.
P2	**Engineering / Telemetry**	Instrumentation Gaps	Instrument explicit GA4 events: `cleaner_paywall_viewed`, `minute_pack_selected`, `processing_started`, `processing_failed`, and `minute_balance_depleted`.

4. Comprehensive Portfolio Architectural Recommendations

```
■■■■■■■■■■■■■■■■■■■
```

Double-down on Music Separation Subscriptions in East Asia. Japan and South Korea are high-LTV subscription markets. Add annual subscription options to lock in recurring revenue.

Telemetry Code Cleanup (Engineering Sprint P0):

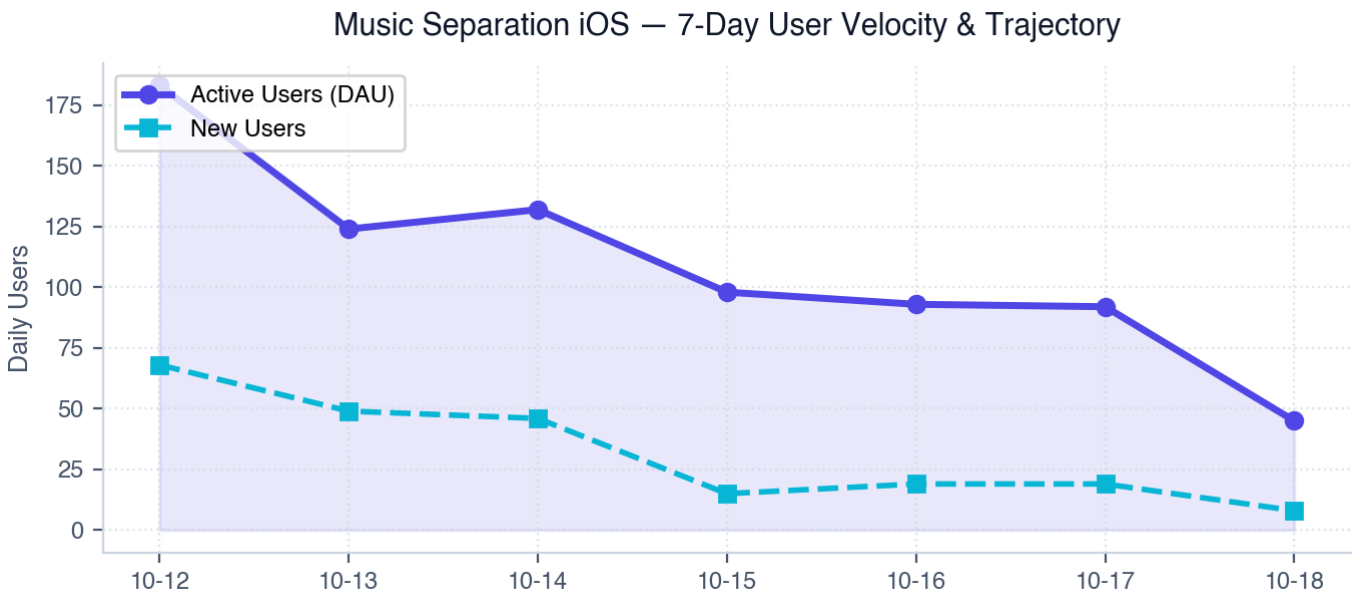

Apply immediate debounce wrappers around `player_pitch_changed` and `player_tempo_changed` in `Music Separation iOS`.

User Acquisition Strategy:

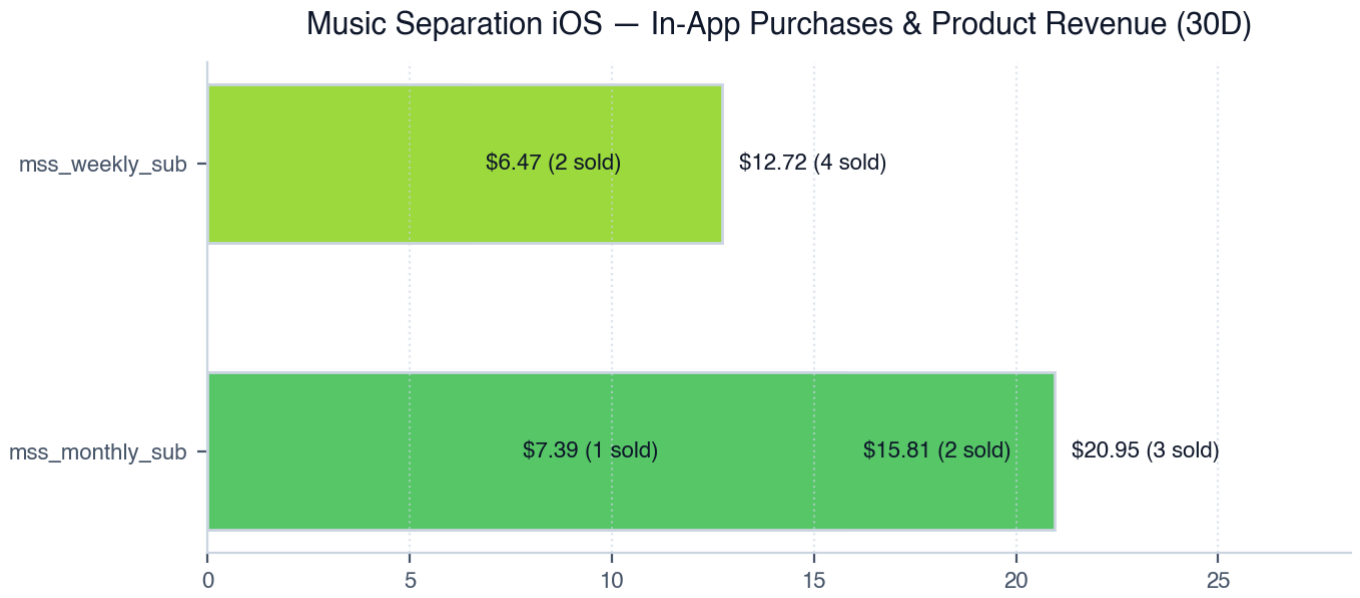

7. Re-activate user acquisition campaigns. The portfolio's crash-free stability (100%) and high engagement rates (75%–90%) indicate strong product-market fit that is currently bottle-necked by low top-of-funnel reach.
