Overarching Portfolio Key Takeaways & Executive Rationale

1. **Divergent Monetization Engines**: The portfolio operates on two entirely distinct monetization models. **Music Separation iOS** acts as a recurring **Subscription SaaS Engine** driven heavily by Asian markets (Japan, South Korea), yielding predictable, recurring revenue from weekly and monthly tiers. Conversely, **Vocal Cleaner** operates as a high-margin **Utility Consumable Engine**, where users rarely subscribe but make high-ticket one-off purchases ($17.34+ USD average item value) for minute top-ups (300-minute packs).
2. **Growth Bottleneck in Vocal Cleaner**: Vocal Cleaner exhibits an extremely strong Intent-to-Pay and High ARPPU ($2.66 30D ARPPU across all active users vs. $0.058 on Music Separation), but suffers from critical **Top-of-Funnel Acquisition Stagnation**. Acquisition dropped to zero new users over the past 5 consecutive days.
3. **Telemetry & Instrumentation Integrity Issues**: Music Separation iOS suffers from an unthrottled UI event logging bug (`player_pitch_changed` firing ~1,532 times per user), inflating event volume and firing excessive telemetry calls.

Application Deep-Dive Reports

1. Deep-Dive: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

- **App Name**: Music Separation iOS
- **Bundle ID**: `com.neuralsound.mss` | **Stream ID**: `14402502632`
- **Health Score**: **7.5 / 10**
- **Rationale**: High core feature engagement, excellent crash stability (100%), and steady recurring revenue in Japan. The score is docked due to a critical telemetry event-spamming bug on player controls, declining yesterday-engagement (55.88% vs 74.6% 30D average), and over-reliance on a single geographic region (Japan = 73.2% of active users).

Build Environment & Monetization Analysis

- **Subscription Breakdown**: Monthly subscriptions generate **69.56%** of tracked product revenue ($44.15 USD), while Weekly subscriptions generate **30.44%** ($19.32 USD). Monthly plans have significantly higher Customer Lifetime Value (LTV) across Japan and South Korea.
- **Environment Integrity**: Production builds (`1.3.11` and `1.3.10`) account for 100% of purchase activity. Internal testing traffic from Bangladesh (3 active users, 1 new user yesterday) is cleanly segregated from production metrics and generated $0.00 in production tables.

2. Deep-Dive: Vocal Cleaner (`com.neuralSound.audiocleaner`)

App Header & Health Score

- **App Name**: Vocal Cleaner
- **Bundle ID**: `com.neuralSound.audiocleaner` | **Stream ID**: `15407667671`
- **Health Score**: **5.2 / 10**
- **Rationale**: High monetization intensity among existing users ($77.31 30D revenue across only 29 active users) and 100% crash-free stability. However, health is severely crippled by top-of-funnel acquisition breakdown (0 new users for 5 consecutive days, 1 total active user yesterday) and intermittent remote download failures.
