## 1. Portfolio Executive Summary & Health Dashboard

The multi-app portfolio consists of two utility applications operating in the digital audio processing domain: **Music Separation iOS** (vocal/instrumental stem separation) and **Vocal Cleaner** (audio noise reduction and speech restoration).

While **Music Separation iOS** acts as the primary volume driver and recurring subscription engine, **Vocal Cleaner** operates as a high-ARPU, low-DAU niche utility monetized predominantly through high-value consumable minute packs.

### Side-by-Side Application Performance Matrix

## 2. Music Separation iOS (`com.neuralsound.mss`)

### App Header & Health Score

- **GA4 Property ID / Stream ID:** `533563138` / `14402502632`
- **Health Score: 7.8 / 10**
- **Rationale:** Strong engagement (74.1% 30D engagement rate), perfect stability (100% crash-free rate across all active versions), and steady multi-regional subscription conversion (Japan leading at 70%+ revenue share). However, the score is capped due to unthrottled slider telemetry flooding events per user, non-debounced UI state tracking, and a sharp engagement dip on 2026-10-22 (falling from 82.1% to 57.0%).

### Build Environment & Monetization Analysis

1. **Production vs. TestFlight Isolation:** Production metrics cleanly exclude internal sandbox telemetry. Internal test builds (Bangladesh team) captured 3 active users generating $8.97 in sandbox transactions, verifying StoreKit 2 sandbox validation flows without contaminating live figures.
2. **Subscription Mix Dynamics:** Monthly subscriptions generate **72.6%** of gross revenue, compared to **27.4%** from weekly subscriptions. LTV is significantly higher on monthly tiers ($6.95–$8.15 net payout per user) vs weekly ($3.16–$3.34).
3. **Regional Pricing Nuances:** Variations in USD real payments (e.g., Japanese monthly tier fluctuating between $6.95 and $6.99 USD) reflect foreign exchange fluctuations and Apple Store Tier adjustments in JPY, KRW, and EUR.

## ■ Multi-Horizon Growth & Historical Scale Comparison

| Horizon | Active Users | New Users | Sessions | Engagement Rate | Revenue ($ USD) | ARPU ($ USD) |
|---|---|---|---|---|---|---|
| **Yesterday** | 152 | 44 | 172 | 57.0% | $6.95 | $0.046 |
| **Past 7 Days** | 624 | 228 | 981 | 73.0% | $40.30 | $0.065 |
| **Past 30 Days** | 2,178 | 1,128 | 4,595 | 74.1% | $137.63 | $0.063 |
| **Past Year (365d)** | 6,768 | 5,816 | 14,770 | 81.3% | $244.11 | $0.036 |
| **Lifetime** | 6,768 | 5,816 | 14,770 | 81.3% | $244.11 | $0.036 |

*Key Insight:* 30-day revenue ($137.63) represents **56.4%** of lifetime revenue ($244.11), indicating that monetization velocity accelerated sharply over the past month driven by expansion in Japan and South Korea.

## Old vs. New User Cohort Deep-Dive

| User Cohort | Active Users | Sessions | Avg Session Duration | Engagement Rate | Screen Views | Views / Session |
|---|---|---|---|---|---|---|

| | | | | | | |
|---|---|---|---|---|---|---|
| **New Users** | 98 | 90 | 226.3 sec (3.7 min) | 48.9% | 118 | 1.31 |
| **Returning Users** | 68 | 78 | 576.8 sec (9.6 min) | 69.2% | 67 | 0.86 |
| **Unmapped Cohort ("")** | 0 | 10 | 0.3 sec | 0.0% | 0 | 0.00 |

*Cohort Dynamics Analysis:*
* **Returning Users** demonstrate **2.5x higher session duration** (9.6 min vs 3.7 min) and a **69.2% engagement rate**, validating core feature utility once onboarded.
* **New User Dropoff:** New user engagement is lower (48.9%), indicating onboarding friction during initial login/separation permissions.
* **Unmapped Anomaly (""):** 10 sessions generated 0.3-second durations with 0% engagement and 0 screen views. This indicates SDK heartbeat pings, background fetch initializations, or interrupted app launches prior to Firebase SDK user attribution initialization.

## 7-Day Velocity & Trajectory

| Date | Active Users | New Users | Sessions | Engagement Rate | Trajectory & Event Summary |
|---|---|---|---|---|---|
| **2026-10-16** | 93 | 19 | 128 | 72.7% | Baseline steady state. |
| **2026-10-17** | 94 | 19 | 127 | 71.7% | Renewal transaction logged in JP ($6.96). |
| **2026-10-18** | 102 | 23 | 125 | 80.8% | Peak weekend engagement engagement rate surge. |
| **2026-10-19** | 102 | 27 | 124 | 75.8% | User acquisition uptick (+17.3% new users). |
| **2026-10-20** | 107 | 45 | 140 | 82.1% | Viral growth spike (+66% new users WoW). |
| **2026-10-21** | 138 | 51 | 164 | 75.6% | Acquisition momentum continues in East Asia. |
| **2026-10-22** | 152 | 44 | 172 | 57.0% | Volume peak (152 AU), but engagement dropped to 57.0%. |

*Trajectory Commentary:* Active users expanded **+63.4%** over 7 days (93 AU -> 152 AU). However, the drop in engagement rate on Oct 22 (57.0%) alongside 44 new users indicates that top-of-funnel acquisition is bringing in lower-intent traffic that bounces before attempting a stem separation.

| App Version | Active Users | Sessions | Engagement Rate | Crash-Free Rate | Operational Baseline |
|---|---|---|---|---|---|
| **1.3.11** | 146 | 166 | 56.6% | **100.0%** | Active Production Baseline (96.0% adoption) |

---

## ■ New Build / TestFlight / Staged Rollout Alert Section

- **Production Baseline Version:** `1.3.11` (96.1% user share).
- **Migration Status:** Version `1.3.10` migration is nearly complete, down from 6 transactions in late September to 1 transaction on Oct 01, and 4 active users yesterday.
- **TestFlight Alert:** No active TestFlight sandbox leakage detected in the production GA4 stream. Sandbox builds are properly isolated on separate debug streams.

## Top In-App Events & Feature Lookups

### Telemetry Analysis & Slider Defect Highlight

A critical telemetry defect was identified in the UI audio player controls:

```
+-------------------------------------------------------------------------------+ | TELEMETRY BUG IDENTIFIED: UNTHROTTLED / UNDEBOUNCED SLIDER EVENT LOGGING |
+-------------------------------------------------------------------------------+ | Event Name | Event Count | Total Users | Events Per User |
|-----------------------------|-------------|-------------|-----------------------| | player_pitch_changed | 1,509 | 7 | 215.6 events / user | | player_tempo_changed | 1,540 | 11 | 140.0 events / user | | player_stem_balance_changed | 146 | 3 | 48.7 events / user |
+-------------------------------------------------------------------------------+
```

*Architectural Diagnosis:* The iOS slider controls (`UISlider` or SwiftUI `Slider`) for pitch, tempo, and stem balance are emitting GA4 custom events on every continuous value change frame during a touch drag event (e.g., `valueChanged`) rather than debouncing logging until

`touchUpInside` / `touchUpOutside`. This creates severe event bloat, strains client network batteries, and skews event volume analytics.

## Geographic Distribution

| **Japan** | 107 | 123 | 70.4% | Core Market: Generates >70% of total revenue |
| **South Korea** | 18 | 18 | 11.8% | Secondary Market: Strong weekly sub conversion |

## 3. Vocal Cleaner (`com.neuralSound.audiocleaner`)

### App Header & Health Score

- **GA4 Property ID / Stream ID:** `533563138` / `15407667671`
- **Health Score: 5.2 / 10**
- **Rationale:** Exceptional engagement utility for existing users (90.1% 30D engagement rate, avg returning user session duration of **61.6 minutes**), zero crashes, and strong purchase monetization per active user ($52.04 per 300-min consumable pack). However, top-of-funnel user acquisition is severely stalled (2 AU yesterday, 28 AU past 30 days, 48 AU lifetime), indicating an app operating almost entirely on organic long-tail retention without structured acquisition channels.

### ■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

#### Product Sales Summary Table (Past 30 Days)

| Item / Product ID | Product Name | Plan Type | Units Sold (30D) | Total Revenue ($ USD) | % Share of Sales |
|---|---|---|---|---|---|
| `neuralsound.cleaner.minutes.300` | 300 minutes | Consumable Pack | 3 | $52.04 | 84.2% |
| `neuralsound.cleaner.minutes.60` | 60 minutes | Consumable Pack | 1 | $6.50 | 10.5% |
| `cleaner_weekly_sub` | Weekly | Weekly Sub | 1 | $3.24 | 5.2% |
| **TOTAL** | -- | -- | **5** | **$61.78** | **100.0%** |

#### Transaction Timeline Log Table

| Date / Timestamp | App Build | Product ID | Product Name | Country | Units | Revenue ($ USD) |
|---|---|---|---|---|---|---|
| **2026-10-11** | 1.0.04 | `neuralsound.cleaner.minutes.300` | 300 minutes | Israel | 2 | $32.60 |
| **2026-10-11** | 1.0.04 | `neuralsound.cleaner.minutes.60` | 60 minutes | Israel | 1 | $6.50 |
| **2026-10-05** | 1.0.03 | `cleaner_weekly_sub` | Weekly | Israel | 1 | $3.24 |
| **2026-09-25** | 1.0.02 | `neuralsound.cleaner.minutes.300` | 300 minutes | Egypt | 1 | $19.44 |

#### Build Environment & Monetization Analysis

1. **Consumable vs. Subscription Paradigm:** Unlike Music Separation, Vocal Cleaner users reject weekly recurring subscriptions ($3.24 generated 5.2% share) and favor bulk consumable minute packs (**84.2% revenue share from 300-minute packs**). On 2026-10-11, a single power user in Israel purchased two 300-minute packs and one 60-minute pack ($39.10 total revenue in one session).
2. **Pricing Optimization Opportunity:** Users treat Vocal Cleaner as a high-value utility tool for long-form audio cleaning (15–60 min files). Subscription paywalls create friction; consumable top-up packs match user mental models far better.

### ■ Multi-Horizon Growth & Historical Scale Comparison

| Horizon | Active Users | New Users | Sessions | Engagement Rate | Revenue ($ USD) | ARPU ($ USD) |
|---|---|---|---|---|---|---|

| | | | | | | |
|---|---|---|---|---|---|---|
| **Yesterday** | 2 | 1 | 4 | 75.0% | $0.00 | $0.00 |
| **Past 7 Days** | 4 | 1 | 32 | 93.8% | $0.00 | $0.00 |

| **Past Year (365d)** | 48 | 47 | 278 | 86.7% | $191.81 | $4.00 |
| **Lifetime** | 48 | 47 | 278 | 86.7% | $191.81 | $4.00 |

*Key Monetization Insight:* 30-Day ARPU is **$2.76** (compared to Music Separation's $0.063). Vocal Cleaner's monetizing users generate significant yield per capita, but overall business scale is constrained by low user volume.
