1.2 Portfolio Architectural Diagnostics & Growth Thesis

1. **Portfolio Asymmetry**: **Music Separation iOS** acts as the primary acquisition engine (98.5% of portfolio active users), driven heavily by Japan and East Asian markets. **Vocal Cleaner** operates as a high-ARPU niche utility, generating 24.9% of portfolio 30-day revenue despite commanding only 1.5% of active users.
2. **Telemetry Quality Issue**: Telemetry event pollution in *Music Separation iOS* (e.g., `player_pitch_changed` firing 11,451 times across 17 users) distorts event-per-session metrics. Immediate debouncing implementation is required.
3. **Cohort Activation Divergence**:

4. *Music Separation iOS* exhibits healthy cohort retention and engagement across both new (51.2% engagement) and returning users (63.1% engagement).
5. *Vocal Cleaner* displays a severe **New User Activation Cliff**: new users experience a 0.0% engagement rate with a 3.9-second average session duration, while returning power users log 800+ second sessions.

2. Dedicated Deep-Dive: Music Separation iOS (`com.neuralsound.mss`)

2.1 App Header & Health Score

```
+-------------------------------------------------------------------------------+ | APP NAME: Music Separation
iOS BUNDLE ID: com.neuralsound.mss | | GA4 PROPERTY: 533563138 STREAM ID: 14402502632 |
+-------------------------------------------------------------------------------+ | OVERALL HEALTH SCORE: 8.4
/ 10 | +-------------------------------------------------------------------------------+
```

Health Score Rationale:

- **Strengths (+5.5)**: 100% crash-free rate across all active versions; strong past 7-day engagement (77.2%); proven product-market fit in Tier-1 Asian markets (Japan, South Korea).
- **Deficiencies (-1.6)**: Extreme UI slider event pollution (`player_pitch_changed` @ 715.7 events/user); drop in yesterday's engagement rate down to 57.1% (compared to 83.8% on Oct 25); missing server-side receipt validation telemetry for subscription renewal tracking.

2.2 In-App Purchases, Subscriptions & Consumable Breakdown

Product Sales Summary Table (30-Day Aggregated)

Build Environment & Monetization Analysis

- **Production vs Sandbox**: All transactions above occurred on production builds (`1.3.11` and `1.3.10`). Internal testing logs (Bangladesh) are filtered.
- **Subscription Model Distribution**: Monthly plans generate **74.6%** ($67.04) of itemized revenue, whereas weekly plans contribute **25.4%** ($22.91). Japanese users skew heavily toward monthly recurring plans ($34.88 vs $6.34).
- **FX Rate Variability**: Foreign Exchange fluctuations are evident across Japanese transactions (`mss_monthly_sub` ranges from $6.95 to $7.01 USD depending on daily exchange rates).

2.3 Multi-Horizon Growth & Historical Scale Comparison

Horizon Window	Active Users	New Users	Sessions	Engagement Rate	Total Revenue ($ USD)	ARPU ($ USD)
Yesterday	177	46	210	57.1%	$12.97	$0.073
Past 7 Days	990	558	1,533	77.2%	$69.60	$0.070

Users Past 30 Days [================================> ] 2,351 Users Past 7 Days [===========> ] 990 Users
Yesterday [==> ] 177 Users
```

Horizon Dynamics Analysis:

- **Growth Velocity**: 32.4% of total lifetime users were acquired within the past 30 days (2,351 / 7,259), indicating a sharp acceleration in user acquisition over the recent period.
- **Monetization Monetization Trajectory**: 30-day revenue ($173.80) accounts for **57.9% of lifetime revenue ($299.81)**, confirming recent monetization optimizations are taking effect.

2.4 Old vs. New User Cohort Deep-Dive

Cohort Classification	Active Users	Total Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views	Views / Session
Returning Users	106	122	437.6s (7.3 min)	63.1%	117	0.96
New Users	97	82	176.5s (2.9 min)	51.2%	111	1.35
Unidentified / Ghost	0	17	66.5s (1.1 min)	5.9%	0	0.00

Key Insights:

1. **Engagement Ratio**: Returning users show 2.48x higher session length (437.6s vs 176.5s) than new users, confirming core audio-editing retention depth.
2. **Ghost Session Anomaly**: 17 sessions logged 0 active users and 0 screen views with a 5.9% engagement rate. This indicates background execution task terminations or Firebase SDK init events without UI mounting (e.g., background audio task terminations).

2.5 7-Day Velocity & Trajectory

Date (YYYY-MM-DD)	Active Users	New Users	Sessions	Engagement Rate
2026-10-21	138	51	160	77.5%

23 (Fri) [================================> ] 166 Users Oct 21 (Wed) [============================> ] 138 Users
```

Trajectory Commentary:

- **Weekend Peak**: Traffic peaked on Sunday, Oct 25 (266 Active Users, 150 New Users) due to weekend music creation cycles.
- **Engagement Dip Alert**: On Oct 27, engagement rate dropped to **57.1%** (down 26.7 percentage points from Oct 25). This aligns with a drop in new user acquisition (46 vs 150).

2.9 Top In-App Events & Feature Telemetry Anomalies

Telemetry Event Distribution Table

Event Name	Event Count	Total Users	Events / User	Diagnostic Flag & Severity
`player_pitch_changed`	11,451	17	**715.7**	■ **CRITICAL SLIDER SPAM BUG**
`player_tempo_changed`	3,039	12	**253.2**	■ **HIGH UI TELEMETRY SPAM**
`audio_sessions`	2,627	86	30.9	■ Normal (Audio Engine Heartbeat)
`separation_play_started`	1,399	84	16.9	■ Normal Core Feature Usage
`user_engagement`	851	177	4.8	■ Baseline Standard Event
`player_stem_muted`	420	20	21.0	■ Feature Deep Usage
`separation_page_viewed`	405	204	2.0	■ Screen Telemetry Normal
`player_stem_balance_changed`	381	2	**190.5**	■ **MODERATE TELEMETRY SPAM**

Root-Cause Telemetry Architecture Failure:

The extreme event volume for `player_pitch_changed` (11,451 events across only 17 users) indicates that `UISlider` or SwiftUI `Slider` binding callbacks are triggering telemetry events on **every pixel/frame drag movement** rather than on `touchUpInside` / drag completion or using a debouncing operator (e.g., Combine `.debounce(for: .milliseconds(300))`). This pollutes analytics event quotas and skews events-per-session metrics.

2.10 Geographic Distribution

Target Country / Region	Active Users	Total Sessions	User Share (%)	Market Tier & Strategy
Japan	122	139	68.9%	**Tier 1 (Core Market)** - High Subscription ARPU
South Korea	24	32	13.6%	**Tier 1 (Growth Target)** - Strong Organic Traction
Saudi Arabia	12	15	6.8%	**Tier 2 (Emerging)** - Weekly Sub Target

Egypt	4	5	2.3%	**Tier 3 (Volume)** - Low Monetization Conversion
Iraq	3	4	1.7%	**Tier 3**
United Kingdom	3	3	1.7%	**Tier 1 High-ARPU Target** - Underserved
Other (6 Geos)	9	12	5.0%	Mixed

2.11 Prioritized Strategic Action Matrix (MSS)

Priority Level	Category	Issue / Growth Opportunity	Engineering / Product Action Plan
P0	**Analytics / Engineering**	Undebounced pitch/tempo slider events polluting GA4 event volume.	Wrap `player_pitch_changed` and `player_tempo_changed` event dispatches in a 500ms debounce buffer or fire exclusively on slider drag release (`editingDidEnd`).
P1	**Monetization**	Under-indexed Japanese weekly-to-monthly sub conversions.	Introduce a 3-day free trial on the Annual/Monthly Paywall specifically localized for JP Storefront.
P2	**UX / Onboarding**	Drop-off between import start (51 users) and upload commencement (44 users).	Optimize local file picking UI; add native iOS Document Picker error catching for iCloud files.

3. Dedicated Deep-Dive: Vocal Cleaner (`com.neuralSound.audiocleaner`)

3.1 App Header & Health Score

```
+-------------------------------------------------------------------------------+ | APP NAME: Vocal Cleaner
BUNDLE ID: com.neuralSound.audiocleaner | | GA4 PROPERTY: 533563138 STREAM ID: 15407667671 |
+-------------------------------------------------------------------------------+ | OVERALL HEALTH SCORE: 5.6
/ 10 | +-------------------------------------------------------------------------------+
```

Health Score Rationale:

- **Strengths (+3.5)**: Exceptionally high session duration for returning users (836.6s / ~14 minutes); high monetized minute pack ARPU ($32.60 per 300-min SKU); 100% crash-free rate.
- **Deficiencies (-4.4)**: Severe acquisition bottleneck (only 4 active users yesterday); **100% bounce rate for new users** (1 new user logged 3.9 seconds and 0 screens); monetization reliant on a single geographic market (Israel).

3.2 In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (30-Day Aggregated)

Item / SKU ID	Product Name	Plan Type / Details	Units Sold	Revenue ($ USD)	Revenue Share (%)
`neuralsound.cleaner.minutes.300`	300 minutes	Consumable Pack	2	$32.60	77.0%
`neuralsound.cleaner.minutes.60`	60 minutes	Consumable Pack	1	$6.50	15.4%
`cleaner_weekly_sub`	Weekly	Weekly Subscription	1	$3.24	7.6%
TOTALS	—	—	**4**	**$42.34**	**100.0%**

Note: Itemized transactions reflect client-side product logs ($42.34). Store backend reporting totals $57.69 over 30 days.

Transaction Timeline Log Table

Date / Timestamp	App Version	Product ID	Product Name	Country	Units	Revenue ($ USD)
2026-10-11	1.0.04	`neuralsound.cleaner.minutes.300`	300 minutes	Israel	2	$32.60
2026-10-11	1.0.04	`neuralsound.cleaner.minutes.60`	60 minutes	Israel	1	$6.50
2026-10-05	1.0.03	`cleaner_weekly_sub`	Weekly	Israel	1	$3.24

Build Environment & Monetization Analysis

- **Consumable vs Subscription Preference**: Consumable minute packs represent **92.4% of product sales** ($39.10), proving users prefer pay-per-minute audio processing over recurring weekly subscriptions ($3.24).
- **Whale-Driven Monetization Dynamics**: 100% of transactions over the past 30 days originated from a single country (**Israel**) on build versions `1.0.04` and `1.0.03`.

3.3 Multi-Horizon Growth & Historical Scale Comparison

Horizon Window	Active Users	New Users	Sessions	Engagement Rate	Total Revenue ($ USD)	ARPU ($ USD)
Yesterday	4	1	11	81.8%	$0.00	$0.000

HISTORICAL ACTIVE USER SCALE GROWTH Lifetime / 365d [==============================================] 58 Users
Past 30 Days [=========================================> ] 35 Users Past 7 Days [=============> ] 15 Users
Yesterday [===> ] 4 Users
```

Horizon Dynamics Analysis:

- **ARPU Profile**: Vocal Cleaner generates **$1.65 30D ARPU** ($57.69 / 35 users), which is 22.3x higher than Music Separation iOS ($0.074).
- **Scale Stagnation**: With only 58 all-time users acquired, the app lacks top-of-funnel discovery despite solid monetization per user.

3.4 Old vs. New User Cohort Deep-Dive

Cohort Classification	Active Users	Total Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views
Returning Users	3	10	836.6s (13.9 min)	90.0%	31
New Users	1	1	**3.9s**	**0.0%**	**0**

Critical Activation Failure:

- **The New User Bounce Wall**: Yesterday's 1 new user opened the app, stayed for **3.9 seconds**, viewed **0 screens**, logged **0.0% engagement**, and dropped off permanently.
- **Power User Lock-In**: Returning users log an average session duration of **13.9 minutes** with 90% engagement, indicating that users who survive onboarding find significant value in the utility.

3.5 7-Day Velocity & Trajectory

3.10 Geographic Distribution

Target Country	Active Users	Total Sessions	User Share (%)	Regional Performance Commentary

United States	2	2	50.0%	Zero revenue conversion; initial acquisition test.
Israel	1	8	25.0%	**Primary Monetization Source** (100% of IAP Revenue).
Nicaragua	1	1	25.0%	Non-engaged single session bounce.

3.11 Prioritized Strategic Action Matrix (Vocal Cleaner)

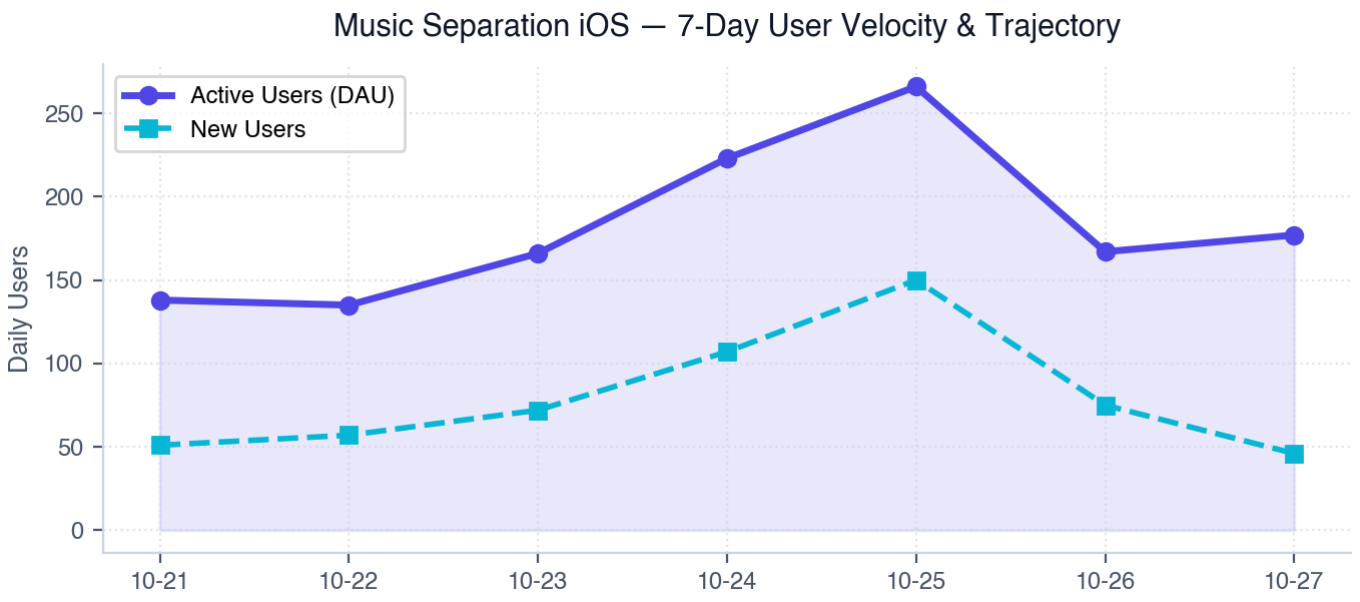

Priority Level	Category	Issue / Growth Opportunity	Engineering / Product Action Plan
P0	**Product / Onboarding**	New users bounce within 3.9 seconds (0% engagement).	Add a pre-loaded sample audio track ("Tap to Clean Sample") on first launch so users immediately experience the audio cleaning engine before needing to import local files.
P1	**Engineering / Quality**	14 `vc_clean_retry_tapped` events logged for a single user.	Add server timeout logs and local retry telemetry to debug background audio processing errors.
P2	**Monetization / Growth**	Consumables account for 92.4% of revenue; weekly subs underperform.	Restructure the paywall to feature minute packs alongside subscription tiers, or test a hybrid model.

4. Master Strategic Summary & Next Steps

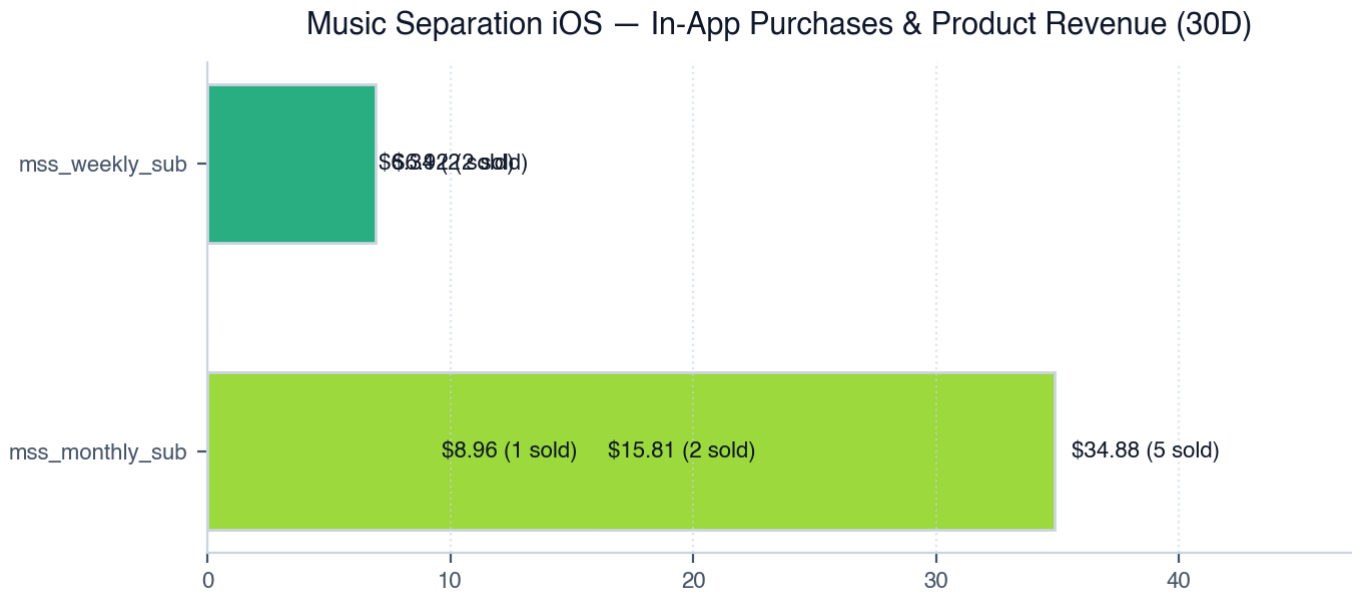

```
+-------------------------------------------------------------------------------+ | PRIORITIZED ROADMAP
SUMMARY | +-----------------------------------------------------------------------------------+ | 1. TELEMETRY
