Architectural Portfolio Synthesis

```
+-----------------------------------------------------------------------------------------------+ | NEURAL SOUND PORTFOLIO | +-----------------------------------------------+-----------------------------------------------+ | MUSIC SEPARATION iOS | VOCAL CLEANER | | High Scale / Low Monetization / B2C | Low Scale / High ARPU / B2B Utility | +-----------------------------------------------+-----------------------------------------------+ | * 2,397 MAU (Strong organic Japanese traffic) | * 35 MAU (Niche utility power users) | | * $170.63 30D Revenue ($0.07 ARPU) | * $93.07 30D Revenue ($2.65 ARPU) | | * Issues: UI Slider Event Thrashing | * Issues: Backend Cleaning Fail Loop | | (450+ pitch events/user) | (22 failure events / user) | +-----------------------------------------------+-----------------------------------------------+
```

1. **Volume vs. Value Dichotomy**: *Music Separation iOS* acts as the volume engine (2,397 30D Active Users), driven by organic Japanese musician acquisition (73.8% DAU). However, its ARPU is low ($0.07/MAU). Conversely, *Vocal Cleaner* operates as a niche power-utility app (35 30D Active Users) generating $2.65/MAU, heavily sustained by high-ticket consumable minute packs ($65.31 in 300-min purchases from power users in Israel).
2. **Technical Telemetry Risk**: Both apps suffer from severe instrumentation flaws. *Music Separation iOS* is flooding GA4 with non-debounced UI slider events (`player_pitch_changed` averaging 450 events/user), risking telemetry budget exhaustion. *Vocal Cleaner* shows a critical backend processing loop where single users trigger up to 22 `vc_clean_failed` events per session due to processing timeouts on longer audio/video files.

2. Deep-Dive: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score

- **Bundle ID**: `com.neuralsound.mss` | **GA4 Property**: `533563138` | **Stream ID**: `14402502632`
- **Health Score**: **7.2 / 10**
- **Rationale**: Stable client-side builds with 100.0% crash-free user rates and dominant market penetration in Japan. However, score is penalized due to **$0 yesterday revenue**, severe **UI event flooding** (pitch/tempo sliders thrashing network logging), and **poor paywall conversion mechanics** relative to active session volume.

Build Environment & Monetization Analysis

- **Build Split**: Production transactions are dominated by build `1.3.11` (86.7% of recent transactions). Legacy build `1.3.10` captured 2 purchases early in the month before phase-out.
- **Subscription Model Distribution**: Monthly subscriptions generate **74.5%** of catalog revenue ($67.04), while Weekly subscriptions account for **25.5%** ($22.91). Japanese localization (■■ / ■■) represents 45.8% of direct sales, aligning with active user demographics.
- **Consumable vs. Recurring**: App relies 100% on recurring subscriptions. Lacks consumable processing packs for casual users who reject recurring commitments.

■ Multi-Horizon Growth & Historical Scale Comparison

Old vs. New User Cohort Deep-Dive

Cohort Category	Active Users	Sessions	Avg Session Duration	Engagement Rate	Screen / Page Views
New Users	133	128	180.7s (3.0m)	47.7%	163
Returning Users	79	96	342.3s (5.7m)	65.6%	60
Unattributed System Sessions	0	19	28.1s (0.4m)	15.8%	6

- **Analysis**: Returning users represent **65.6% engagement** with long duration (342.3s), proving core audio tool retention. New users experience high drop-off (47.7% engagement, 180.7s duration), signaling friction during initial file import/separation setup.

■ New Build / TestFlight / Staged Rollout Alert Section

- **Production Baseline**: Version `1.3.11` is deployed to **97.5% of DAU** (194/199 users).
- **Rollout Risk Assessment**:
- No crash anomalies or exceptions recorded on `1.3.11` (100% crash-free rate).
- Legacy builds (`1.3.10`, `1.3.09`) show reduced engagement (33.3%), confirming successful user migration to `1.3.11`.
- **Alert**: Yesterday's engagement rate on `1.3.11` dropped to **54.5%** compared to the 7-day baseline (**76.0%**), driven by a higher ratio of unauthenticated/new user drop-offs during file import.

Top In-App Events & Feature Lookups

Event Name	Total Event Count	Unique Users	Events / User	System Status & Telemetry Findings
`player_pitch_changed`	**7,657**	17	**450.4**	■ **CRITICAL BUG**: Slider dragging lacking UI debouncing.
`player_tempo_changed`	**3,410**	15	**227.3**	■ **CRITICAL BUG**: Un-throttled continuous event firing.
`audio_sessions`	2,234	90	25.7	Normal Core Session Loop
`separation_play_started`	1,295	87	15.4	Active Audio Playback
`user_engagement`	832	199	4.2	Baseline Engagement
`player_stem_muted`	503	17	29.6	Core Mixer Utility
`player_stem_balance_changed`	397	4	**99.2**	■■ High frequency slider event (Requires Debounce)
`separation_page_viewed`	358	189	3.1	Primary Screen View
`onboarding_step_viewed`	292	75	4.1	Onboarding Progression

Telemetry Bug Diagnosis: Continuous Slider Event Flooding

- **Issue**: `player_pitch_changed` (450.4 events/user) and `player_tempo_changed` (227.3 events/user) fire on every UI frame during slider drag operations (`touchMoved` / SwiftUI `onChange`).
- **Impact**: Saturated GA4 network logging, increased device battery drain, and distorted event-per-session ratios.

Prioritized Strategic Action Matrix (Music Separation iOS)

Priority	Area	Categorization	Strategic Action Item	Target Impact
P0	Engineering	Telemetry Bug	Implement a 500ms debounce timer on `player_pitch_changed`, `player_tempo_changed`, and `player_stem_balance_changed` UI controls.	Eliminate 95%+ redundant logging events.

P0	Monetization	Revenue Growth	Introduce localized soft-paywalls immediately following `separation_upload_completed` in Japan & South Korea.	Drive daily non-zero monetization.
P1	Growth / UX	Funnel Opt.	Streamline initial separation entry point; current import drop-off loses 52.9% of users before file selection.	Boost upload completion from 24.9% to 40%.
P2	Localization	Product	Expand Japanese-specific promotional metadata and localized trial incentives on weekly subscription tiers.	Increase Japanese subscriber conversion.

3. Deep-Dive: Vocal Cleaner (`com.neuralSound.audiocleaner`)

App Header & Health Score

- **Bundle ID**: `com.neuralSound.audiocleaner` | **GA4 Property**: `533563138` | **Stream ID**: `15407667671`
- **Health Score**: **5.8 / 10**
- **Rationale**: High ARPU monetization potential ($35.38 revenue from 7 DAU) with long session durations (~23 mins) and 100% crash-free rates. However, score is severely constrained by **extremely low scale** (7 DAU, 35 MAU) and **backend processing failure loops** affecting power users.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary Table (30-Day Catalog Aggregation)

Item / Product ID	Localized Product Name	Plan Type	Units Sold (30D)	Total Revenue ($ USD)	Catalog % Share
`neuralsound.cleaner.minutes.300`	300 minutes	Consumable Pack (300 Min)	4	$65.31	87.02%

2026-10-05	1.0.03	`cleaner_weekly_sub`	Weekly	Israel	1	$3.24

Build Environment & Monetization Analysis

- **Monetization Profile**: Consumable Minute Packs drive **95.7%** of direct product sales ($71.81). Standard weekly subscriptions generate only $3.24 (4.3%).
- **Whale User Concentration**: 100% of recorded transactions originate from **Israel**, representing a localized power user purchasing 300-minute packs repeatedly for high-volume audio/video cleaning.
- **Build Staging**: Transactions executed cleanly on production builds `1.0.04` and `1.0.03`. No sandbox retry loops detected.

■ New Build / TestFlight / Staged Rollout Alert Section

- **Production Baseline**: Version `1.0.04` serves **100% of current users**.
- **System Alert - Server/Backend Processing Failures**:

- While client-side crash-free rate is **100.0%**, telemetry reveals severe backend processing execution failures on build `1.0.04`.
- Events recorded: `vc_clean_failed` (22 events across 1 user), `vc_clean_failed_transient` (9 events), `vc_clean_failed_timeout` (6 events), `vc_clean_failed_backend` (5 events).
- **Diagnosis**: High-duration files (5–15 min files: 37 events; over 5m clean times: 6 events) trigger server-side worker timeouts, forcing power users into manual retry loops (`vc_clean_retry_tapped`: 14 events).

Prioritized Strategic Action Matrix (Vocal Cleaner)

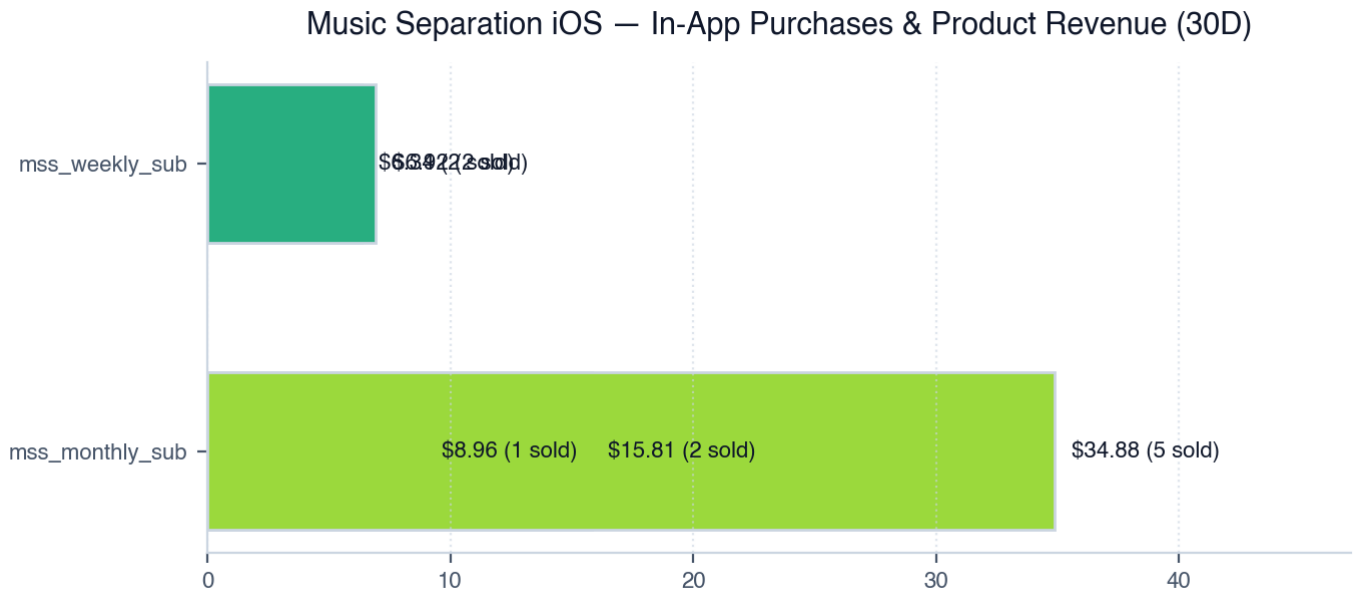

Priority	Area	Categorization	Strategic Action Item	Target Impact
P0	Backend Infrastructure	Server Optimization	Increase backend worker timeout limit for audio/video files exceeding 5 minutes and implement chunked upload processing.	Eliminate 22x `vc_clean_failed` loop for power users.
P0	Monetization	Pricing Strategy	Protect high-ARPU minute pack revenue ($65.31 SKU) by adding automatic minute refunds on backend job timeouts.	Prevent power user churn in key markets (Israel).
P1	Growth / UA	User Acquisition	Establish targeted search campaigns (ASO / Apple Search Ads) for professional audio keywords in US and Israel.	Expand MAU from 35 to 500+ active users.
P2	Product UX	Retention	Introduce batch processing and background execution so long audio files clean asynchronously without keeping UI active.	Reduce user friction during 23-minute sessions.
