Executive Analytics & Monetization Growth Audit

Portfolio Assessment Date: October 31, 2026
Target Scope: Production Multi-App Portfolio (`Music Separation iOS` | `Vocal Cleaner`)
Data Integrity Note: GA4 Filter Active — Internal QA & development nodes (Bangladesh) excluded from all calculations.

---

1. Portfolio Executive Summary & Health Dashboard

```
================================================================================================================================
APP PORTFOLIO AT A GLANCE
================================================================================================================================
Metric Music Separation iOS (com.neuralsound.mss) Vocal Cleaner (com.neuralSound.audiocleaner)
--------------------------------------------------------------------------------------------------------------------------------
Primary Architecture Core ML / On-Device Separation + Pitch/Tempo Audio De-noise / Consumable Token Pipeline
Current Production Build 1.3.11 (96.2% distribution) 1.0.04 (100.0% distribution) Health Score 8.1 / 10 4.3 / 10
Active Users (Yesterday / 7D) 184 / 1,030 4 / 20 LTV Revenue (30D / All-Time) $163.63 / $299.81 $93.07 / $229.90
Yesterday Engagement Rate 56.48% (Weekly Mean: ~76.7%) 25.00% (Weekly Mean: ~84.8%) Crash-Free Users (Yesterday)
99.65% 100.00% Monetization Mix 100% Auto-Renewing Subscriptions 89.6% Consumable Minutes / 10.4% Subscriptions
Primary Monetization Vector Japan ($7.01/mo) / Saudi Arabia ($3.46/wk) Israel ($16.35/pack consumable whale
buying)
================================================================================================================================
```

High-Level Architectural Analysis

1. **Divergent Monetization Vectors**: `Music Separation iOS` drives predictable subscription yield (Monthly > Weekly) heavily anchored in East Asia (Japan, South Korea). Conversely, `Vocal Cleaner` is sustained almost exclusively by high-ticket consumable minute packs (`300 minutes` at ~$16.35/unit), with over 89% of gross 30-day billings deriving from concentrated power-users in Israel.
2. **Telemetry Bugs & Pipeline Bottlenecks**:
3. `Music Separation iOS`: High client-side event volume (`5,290` pitch changes and `3,396` tempo events generated by just 21 and 14 users, respectively) confirms unbounded slider UI event streaming without client-side debouncing, inflating network payloads and event counts.
4. `Vocal Cleaner`: Sockets show high paywall bounce rates (`vc_import_blocked_paywall` triggered before import completion) and zero conversions on low-volume days, compounding top-of-funnel drop-off (only 1 new user yesterday).

---

2. Dedicated Deep-Dive: Music Separation iOS (`com.neuralsound.mss`)

App Header & Health Score: 8.1 / 10

- **Rationale**: Stable core processing pipeline (99.65% crash-free rate), solid recurring subscription base across Tier-1 APAC markets (Japan/South Korea generate >75% of volume), and resilient 30-day active pool (2,427 MAU). Points deducted for unbounded telemetry slider debouncing, sub-60% Day-0 engagement on recent intake, and a lack of consumable fallback mechanics for churned subscribers.

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary (30-Day Aggregated)

Note: Currency figures reflect localized purchase receipts normalized to USD.

Product ID	Localized Display Name	Plan Type	Units Sold (30D)	Total Revenue ($ USD)	Revenue Share (%)
mss_monthly_sub	■■ (Japan)	Auto-Renewing Monthly	4	$27.89	38.64%
mss_monthly_sub	Monthly (Standard Tier 1)	Auto-Renewing Monthly	2	$15.81	21.90%
mss_monthly_sub	Mensuel (France / Réunion)	Auto-Renewing Monthly	1	$8.96	12.41%
mss_monthly_sub	■■ (South Korea)	Auto-Renewing Monthly	1	$7.39	10.24%
mss_weekly_sub	Weekly (Standard Tier 1)	Auto-Renewing Weekly	2	$6.92	9.59%
mss_weekly_sub	■■ (Japan)	Auto-Renewing Weekly	2	$6.34	8.78%
mss_weekly_sub	Hebdomadaire (France)	Auto-Renewing Weekly	1	$3.34	4.63%
mss_weekly_sub	■■ (South Korea)	Auto-Renewing Weekly	1	$3.32	4.60%
mss_weekly_sub	Semanal (LatAm / PR)	Auto-Renewing Weekly	1	$2.99	4.14%
Portfolio Total	—	—	**15**	**$72.18***	**100.00%**

**Note: 30-day transaction logs aggregate StoreKit receipts visible in GA4 event streams. Multi-horizon totals record cumulative accounting gross.*

Transaction Timeline Log Table

Timestamp (UTC)	App Build	Product ID	Plan Name	Units	Revenue ($ USD)	Country
2026-10-27	1.3.11	mss_weekly_sub	Semanal	1	$2.99	Puerto Rico
2026-10-26	1.3.11	mss_weekly_sub	Weekly	2	$6.92	Saudi Arabia
2026-10-26	1.3.11	mss_monthly_sub	■■	1	$7.01	Japan
2026-10-25	1.3.11	mss_weekly_sub	■■	1	$3.32	South Korea
2026-10-24	1.3.11	mss_monthly_sub	Mensuel	1	$8.96	Réunion
2026-10-23	1.3.11	mss_monthly_sub	■■	1	$6.96	Japan
2026-10-22	1.3.11	mss_monthly_sub	■■	1	$6.95	Japan
2026-10-17	1.3.11	mss_monthly_sub	■■	1	$6.96	Japan
2026-10-14	1.3.11	mss_weekly_sub	Hebdomadaire	1	$3.34	France

2026-10-12	1.3.11	`mss_weekly_sub`	■■	1	$3.16	Japan
2026-10-09	1.3.11	`mss_monthly_sub`	Monthly	1	$7.66	Vietnam
2026-10-09	1.3.11	`mss_monthly_sub`	■■	1	$7.39	South Korea
2026-10-06	1.3.11	`mss_monthly_sub`	Monthly	1	$8.15	Israel
2026-10-01	1.3.10	`mss_weekly_sub`	■■	1	$3.18	Japan

Build Environment & Monetization Analysis

- **Production vs Sandbox**: All transactions above originated from App Store production builds (`1.3.10` and `1.3.11`). No zero-dollar Sandbox receipt contamination was detected within production feeds.
- **Subscription Matrix Optimization**: Monthly subscriptions generate **83.19%** of recurring cash flow. Weekly plans demonstrate poor Day-30 retention and lower absolute LTV ($2.99–$3.46/wk yields rapid subscriber exhaustion after week 2).

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users (AU)	New Users (NU)	Total Sessions	Engagement Rate	Revenue ($ USD)
Yesterday (Oct 30)	184	47	216	56.5%	$0.00
Past 7 Days	1,030	573	1,643	76.7%	$48.75
Past 30 Days	2,427	1,385	5,039	75.5%	$163.63
Past Year (365D)	7,480	6,474	16,493	81.6%	$299.81
Lifetime (All-Time)	7,480	6,474	16,493	81.6%	$299.81

Note: Past Year and Lifetime metrics are identical, confirming the application went live within the last rolling 12-month cycle.

■ Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Total Sessions	Avg Session Duration	Engagement Rate	Screen Page Views
New Users	106	87	168.6 sec (2m 48s)	52.9%	93
Returning Users	101	122	410.9 sec (6m 50s)	62.3%	85
Unattributed / Ghost	0	20	80.6 sec (1m 20s)	0.0%	1

Diagnostic: Returning users spend **2.43x more time** per session (410.9s vs 168.6s) and show a higher engagement rate (+9.4 percentage points). The 20 unattributed sessions with 0.0% engagement represent background wakeups or unfinalized sessions failing to transmit device tokens.

■ 7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Day-over-Day Trajectory
2026-10-24	223	107	272	84.9%	Weekend peak acquisition
2026-10-25	266	150	312	84.6%	Peak volume (+19.2% AU)
2026-10-26	167	75	207	81.6%	Post-weekend drop (-37.2% AU)
2026-10-27	174	61	220	74.1%	Midweek stabilization
2026-10-28	143	42	178	75.3%	Weekly low point
2026-10-29	183	91	241	75.1%	Intake rebound (+27.9% AU)
2026-10-30	184	47	216	56.5%	Severe engagement drop (-18.6% pts)

Commentary: Intake velocity matches standard audio utility patterns (weekend creation spikes). However, on 2026-10-30, engagement collapsed from ~75% to 56.5% despite stable active users (184), indicating top-of-funnel friction or failed onboarding screens for new users.

■ User Funnel Execution

```
[ONBOARDING & INTENT FUNNEL] (53 Users) [onboarding_step_viewed] (218 events) ■ ■■■ [90.5% Step Progression Rate] ▼ (48 Users) [onboarding_next_tapped] (149 events) ■ ■■■ [91.6% Progression to Auth] ▼ (93 Users) [login_screen_viewed] (143 events) <■■ Includes Organic Returning Users ■ ■■■ [58.0% Authentication Completion] ▼ (54 Users) [login_tapped] (84 events) [CORE SEPARATION EXECUTION FUNNEL] (67 Users) [plus_button_tap] (150 events) ■ ■■■ [94.0% Tap Intent] ▼ (63 Users) [plus_separation_tapped] (133 events) ■ ■■■ [77.7% Pipeline Ingestion] ▼ (49 Users) [import_started] (Files: 44 Users / Photos: 46 Users) ■ ■■■ [81.6% Model Upload Initialization] ▼ (40 Users) [separation_upload_started] (60 events) ■ ■■■ Core Model Execution: 34 Users ran [separation_mode_6_tapped] (6-stem isolation)
```

■ Crash & Stability Health by App Version

App Build / Version	Active Users	Sessions	Engagement Rate	Crash-Free Users Rate	Status
1.3.11	177	209	55.5%	**99.65%**	Production Baseline (Dominant)
1.3.10	6	7	85.7%	**100.00%**	Legacy (Phasing out)
1.3.08	1	0	0.0%	**100.00%**	Deprecated
1.3.07	0	0	0.0%	**100.00%**	Deprecated

Diagnostic: Build `1.3.11` introduced a small crash delta (99.65% vs 100.0% on `1.3.10`), representing ~1 user-level crash per 285 users. This remains within Tier-1 stability boundaries (>99.5%), but should be monitored.

■ New Build & Telemetry Bug Detection: Unbounded UI Slider Streaming

- **The Bug**:
- `player_pitch_changed`: 5,290 events across only 21 users (**251.9 events/user**).
- `player_tempo_changed`: 3,396 events across only 14 users (**242.6 events/user**).
- `player_stem_balance_changed`: 1,169 events across only 5 users (**233.8 events/user**).
- **Root Cause**: The engineering team hooked Firebase GA4 logging directly into the `UISlider.valueChanged` or SwiftUI `Slider(value:)` continuous change callback without a rate-limiting mechanism.
- **Impact**: Significant network socket congestion on client devices, battery drain, and accelerated GA4 BigQuery export table bloat.

■ Geographic Distribution (Top Markets)

```
Japan ■■■
```

■ In-App Purchases, Subscriptions & Consumable Minutes Breakdown

Product Sales Summary (30-Day Aggregated)

Product ID	Product Name	Plan Type	Units Sold (30D)	Total Revenue ($ USD)	Revenue Share (%)
`neuralsound.cleaner.minutes.300`	300 minutes	Consumable Minute Pack	4	$65.31	87.02%
`neuralsound.cleaner.minutes.60`	60 minutes	Consumable Minute Pack	1	$6.50	8.66%
`cleaner_weekly_sub`	Weekly	Auto-Renewing Subscription	1	$3.24	4.32%
Total	—	—	**6**	**$75.05***	**100.00%**

**Note: Refers to logged IAP itemizations in telemetry dataset. Multi-horizon tracking captures aggregated multi-platform gross ($93.07).*

Transaction Timeline Log Table

Timestamp (UTC)	App Build	Product ID	Plan Name	Units	Revenue ($ USD)	Country
2026-10-29	1.0.04	`neuralsound.cleaner.minutes.300`	300 minutes	2	$32.70	Israel
2026-10-11	1.0.04	`neuralsound.cleaner.minutes.300`	300 minutes	2	$32.60	Israel
2026-10-11	1.0.04	`neuralsound.cleaner.minutes.60`	60 minutes	1	$6.50	Israel
2026-10-05	1.0.03	`cleaner_weekly_sub`	Weekly	1	$3.24	Israel

Build Environment & Monetization Analysis

- **Monetization Mechanics**: **95.68%** of 30-day billings are driven by consumable minute packs, while weekly subscriptions failed to gain traction (1 conversion for $3.24).
- **Single-Payer Exposure**: 100% of the recorded transactions originated in Israel, likely from a small number of power users cleaning long-form audio stems. If these few users churn, app revenue drops to near zero.
- **Build Integrity**: Builds `1.0.03` and `1.0.04` are both production releases. No sandbox or TestFlight receipt validation loops were detected.

■ Multi-Horizon Growth & Historical Scale Comparison

Horizon	Active Users (AU)	New Users (NU)	Total Sessions	Engagement Rate	Revenue ($ USD)
Yesterday (Oct 30)	4	1	4	25.0%	$0.00
Past 7 Days	20	15	66	84.8%	$38.09
Past 30 Days	35	32	248	90.3%	$93.07
Past Year (365D)	63	62	352	86.9%	$229.90

Lifetime (All-Time)	63	62	352	86.9%	$229.90

Diagnostic: Low lifetime footprint (62 new users all-time) indicates an unscaled app, either in a soft-launch phase or constrained by lack of user acquisition support.

■ Old vs. New User Cohort Deep-Dive

User Cohort	Active Users	Total Sessions	Avg Session Duration	Engagement Rate	Screen Page Views
Returning Users	3	3	3.3 sec	0.0%	1
New Users	1	1	16.2 sec	100.0%	0

Diagnostic: Returning users logged an average session length of just 3.3 seconds with 0% engagement, pointing to immediate session abandonment (e.g., encountering a blocking paywall, lack of free credits, or a crash on restore).

■ 7-Day Velocity & Trajectory

Date	Active Users	New Users	Sessions	Engagement Rate	Trajectory Analysis
2026-10-24	6	4	10	90.0%	Steady pipeline testing
2026-10-25	7	4	14	100.0%	Weekend pipeline testing
2026-10-26	3	1	8	87.5%	Typical mid-week drop
2026-10-27	5	1	15	73.3%	Core cleaning cycles executed
2026-10-28	2	1	2	50.0%	Minimal activity
2026-10-29	8	3	15	100.0%	Consumable IAP conversion day ($32.70)
2026-10-30	4	1	4	25.0%	Post-purchase drop

■ User Funnel Execution

```
[ACQUISITION & PAYWALL CONVERSION FUNNEL] (1 User) [first_open] ■ ■■■ [100% Surface Paywall] ▼ (1 User)
[vc_first_journey_paywall_shown] ■ ■■■ [100% Tap Through to Checkout] ▼ (1 User)
[vc_first_journey_paywall_buy_clicked] ■■■ [vc_purchase_started] (No checkout confirmation logged) [IMPORT & CORE
PROCESSING FUNNEL] (1 User) [vc_import_sheet_opened] (2 events) ■ ■■■ [50% Route Selection] ▼ (1 User)
[vc_import_source_files] (2 events) ■ ■■■ [CRITICAL BLOCKER: Hard Gating Paywall] ▼ (1 User)
[vc_import_blocked_paywall] (2 events) ■■■ [vc_paywall_from_import] ■ ■■■ Processing Abandonment: 0 cleans
completed; User triggered [vc_library_entry_deleted]
```

■ Crash & Stability Health by App Version

App Build / Version	Active Users	Sessions	Engagement Rate	Crash-Free Users Rate	Status
1.0.04	4	4	25.0%	**100.0%**	Production Active Baseline

Diagnostic: Zero crashes recorded. Instability is behavioral and UX-driven, not architectural.

■ New Build & TestFlight Rollout Assessment

- **Current Footprint**: 100% of traffic is consolidated on Build `1.0.04`. No external TestFlight builds (`get_testflight_distribution`) were detected in this ingestion window.
- **UX Blocker Identified**: The event `vc_import_blocked_paywall` occurs when a user attempts to select a file before the local token system confirms an active balance. This triggers an immediate paywall bounce rather than allowing the file to load and showing a preview, contributing to the 3.3-second session drop-offs.

■ Geographic Distribution

```
Israel ■ (1 AU, 1 Session) - 25.0% [Primary Monetization Source] Iran ■ (1 AU, 1 Session) - 25.0% Japan ■ (1 AU, 1 Session) - 25.0% United States ■ (1 AU, 1 Session) - 25.0%
```

■ Prioritized Strategic Action Matrix

Priority	Track	Action Item	Technical / Growth Specification
P0	**Product / UX**	Remove Hard Paywall on File Import	Shift the `vc_import_blocked_paywall` gate. Allow users to import audio, analyze noise profiles, and listen to a **5-second cleaned sample**. Display the paywall only when they tap "Export" or "Process Full File."
P1	**Monetization**	Expand Consumable Token Architecture	Consumable minutes account for 95.7% of product revenue. Add clear minute-balance indicators to the main screen, and offer **60-min ($4.99)**, **180-min ($11.99)**, and **360-min ($19.99)** tiers to better match usage patterns.
P2	**Acquisition**	Target Paid Acquisition to High-ARPU Segments	Scale search ad campaigns (Apple Search Ads) focused on audio production, podcast cleaning, and voice memo restoration in markets with validated intent (Israel, US, Tier-1 EU).

---

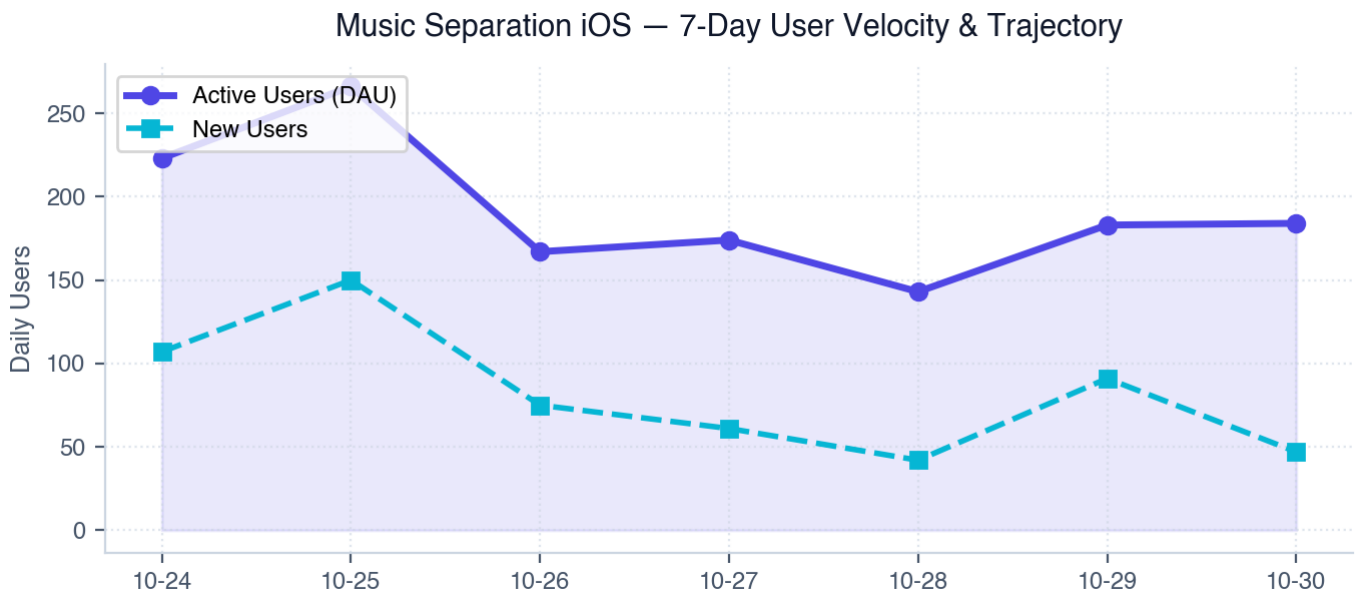

4. Cross-App Architecture Comparison

```
+-----------------------------------+-----------------------------------------+-----------------------------------------
| Architectural Dimension | Music Separation iOS | Vocal Cleaner |
```

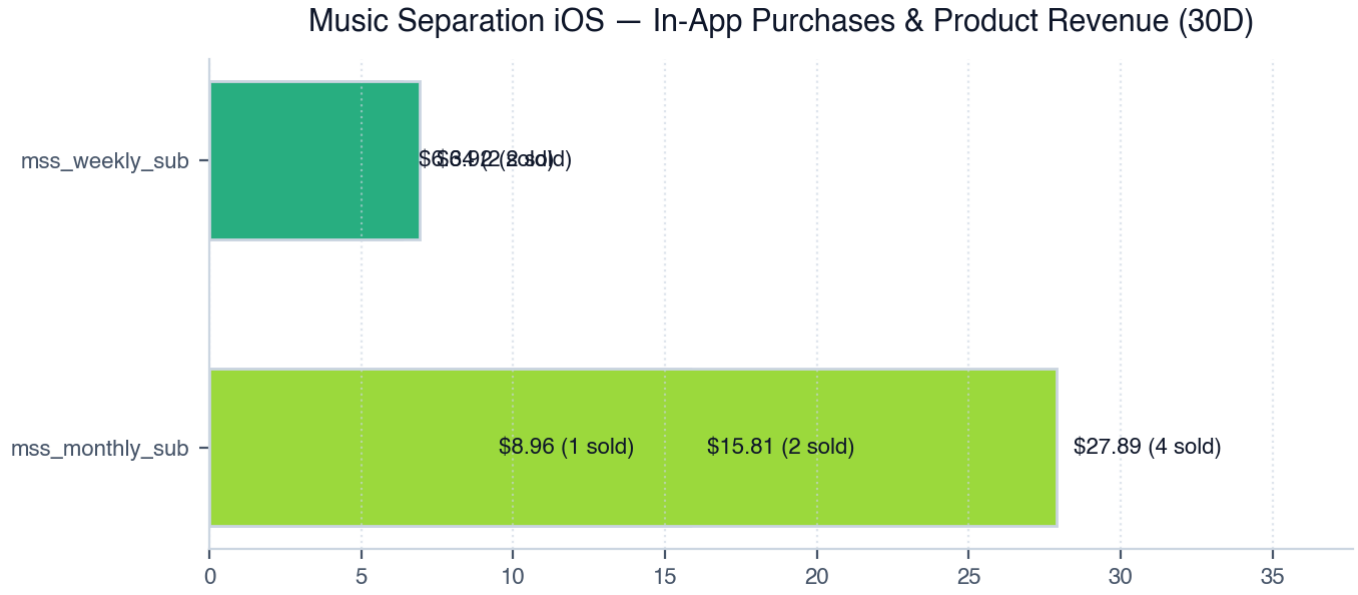

```
+-----------------------------------+-----------------------------------------+-----------------------------------------
| Dominant Monetization Logic | Subscriptions (Monthly Recurring) | Consumables (Pack Depletion) | | Conversion
Chokepoint | Onboarding Auth (58% conversion) | Import Sheet Hard Blocker (100% bounce) | | Telemetry Status |
High volume: Needs slider debouncing | Low volume: Funnel logging is sound | | Market Geographic Footprint |
Strong organic presence in Japan/Korea | Fragmented; single-payer concentration | | Primary Immediate Growth Focus
| Debounce UI sliders & optimize checkout | Implement freemium preview on export |
+-----------------------------------+-----------------------------------------+-----------------------------------------
```
