■ Multi-App Portfolio Growth & Analytics Report

Prepared by: Principal Mobile Analytics & Monetization Growth Architect
Data Scope: Production Analytics Baseline (Internal Sandbox / Bangladesh Testers Excluded from Baseline Metrics)
Reporting Period: Comprehensive Daily Snapshot (Multi-Horizon: Yesterday, 7D, 30D, 365D, Lifetime)

1. Portfolio Executive Summary & Health Dashboard

The multi-app portfolio currently comprises two active iOS applications: **Music Separation iOS** (`com.neuralsound.mss`) and **Vocal Cleaner** (`com.neuralSound.audiocleaner`).

While **Music Separation iOS** serves as the high-volume audience engine (~98.5% of total active users), **Vocal Cleaner** acts as a high-margin monetization boutique, yielding an exceptional Average Revenue Per User (ARPU) driven by consumable minute packs.

Portfolio Comparative Metrics (30-Day Window)

```

1. **Monetization Density Disparity: Vocal Cleaner** generates **46.7x higher ARPU** ($2.896 vs $0.062) than Music Separation iOS. Vocal Cleaner users show willingness to make high-ticket consumable purchases ($32.70 per 300-minute pack).
2. **Audience Scale Disparity: Music Separation iOS** accounts for **98.5% of total portfolio active traffic**, primarily organic acquisition in Japan and South Korea. However, its paywall conversion funnel is underperforming.
3. **Stability Benchmark:** Both applications maintain a **100% Crash-Free User Rate** across production builds.
4. **Telemetry Health Warning:** Both applications suffer from un-debounced UI slider events (`player_pitch_changed`, `vc_adjust_opened_pitch`), creating high telemetry log volume that distorts per-user event counts.

App Header & Health Score

- **Bundle ID:** `com.neuralsound.mss` | **GA4 Property ID:** `533563138` | **Stream ID:** `14402502632`
- **Health Score:** `7.8 / 10`
- **Health Score Rationale:**
- **Positives (+):** Strong organic user retention and volume in Tier-1 Asian markets (Japan/Korea), 100% crash-free stability on `v1.3.11`, high session engagement (>75% 30D engagement rate).
- **Negatives (-):** Weak monetized user yield ($0.062 30D ARPU), missing paywall triggers on stem extraction complete events, and severe UI slider telemetry bloat (~861 pitch events per pitch-editing user).

Build Environment & Monetization Analysis

- **Production Build Baseline:** 100% of production purchases occurred on production build **`1.3.11`**. Zero purchase errors or StoreKit retry loop anomalies detected in production.
- **Internal Test Flight / Sandbox Isolation:** Internal testing conducted from Bangladesh (2 Active Users, 2 Sessions, $36.93 Sandbox Revenue) was successfully segregated into non-production sandbox parameters.
- **Subscription Mechanics vs Consumables:** Music Separation iOS relies exclusively on flat subscriptions (`mss_monthly_sub` and `mss_weekly_sub`). Monthly subscriptions account for **75.3% of transaction revenue**. The app currently lacks consumable minute packs or pay-per-processing tiers, which leaves money on the table for heavy power users extracting dozens of stems per week.

3. Deep-Dive: Vocal Cleaner (`com.neuralSound.audiocleaner`)

App Header & Health Score

- **Bundle ID:** `com.neuralSound.audiocleaner` | **GA4 Property ID:** `533563138` | **Stream ID:** `15407667671`
- **Health Score:** `6.5 / 10`
- **Health Score Rationale:**
- **Positives (+):** Exceptionally strong monetization metrics ($2.896 ARPU), high user engagement session length (~20.6 minutes average session duration), strong high-ticket pack sales ($32.70 consumable unit orders), and 100% stability on `v1.0.04`.
- **Negatives (-):** Critically low top-of-funnel active traffic (only 38 active users per 30 days), zero active organic acquisition engine, and a **66.7% failure rate in AI Caption Generation** (`vc_captions_generate_failed`).

Build Environment & Monetization Analysis

- **Production Build Baseline:** Production transactions active on build **`1.0.04`** (100% of current traffic) and build **`1.0.03`** (legacy transaction on Oct 5). StoreKit integration functions flawlessly.
- **Consumable Minutes vs. Subscriptions Dynamics:** Consumable minute packs drive **93.2% of total SKU revenue** ($85.79 out of $92.02). Users prefer purchasing pay-as-you-go audio processing minutes (specifically the 300-minute bulk tier for ~$32.70) over recurring weekly subscriptions ($2.99/wk).

4. Master Architectural Recommendations Across Entire Portfolio

1. **Implement Global SDK Event Throttling:**
2. Both iOS codebases require a central debouncing wrapper around UI slider controls (`UISlider` / SwiftUI `Slider`).
3. **Implementation Rule:** Only fire `player_pitch_changed` or `vc_adjust_changed_pitch` events when the touch drag state transitions to `.ended` or `.cancelled` (fire-on-release).
4. **Re-allocate Marketing Capital to High-ARPU Assets:**
5. **Vocal Cleaner** produces **$2.896 ARPU** on pure organic traffic. Running targeted search ads (Apple Search Ads on keywords like *"vocal noise remover"* and *"audio cleaner"*) will yield immediate positive Return On Ad Spend (ROAS).
6. **Cross-App Promotion Ecosystem:**
7. Introduce a cross-app banner or contextual prompt inside **Music Separation iOS** (*"Need to clean background noise or remove vocal room echo? Try Vocal Cleaner"*). Converting 2% of MSS's 2,582 monthly active users into VC minute pack buyers would generate an estimated **+$150.00/month** in additional high-margin revenue.
