Mobile Product Analytics Portfolio • Automated Daily Briefing • *2026-08-22*

Executive Portfolio Report: Mobile Analytics & Growth Architecture

1. Portfolio Executive Summary & Health Dashboard

Executive Overview

This portfolio analysis evaluates active mobile applications under analytics tracking, focusing on user acquisition momentum, conversion efficiency, stability metrics, and operational performance. In this reporting cycle, **Neural Sound iOS** serves as the primary flagship application analyzed within the dataset portfolio.

```
+-------------------------------------------------------------------------------+ | PORTFOLIO METRIC SUMMARY |
+-------------------------+----------------------+-------------------------------+ | Total Active Users (24h) |
Total Sessions (24h) | Portfolio Avg Engagement Rate | | 146 | 186 | 84.95% |
+-------------------------+----------------------+-------------------------------+ | Portfolio Crash-Free |
7-Day Active Growth | Dominant Geographic Market | | 99.45% | +342.4% | South Korea (75.3% AU Share) |
+-------------------------+----------------------+-------------------------------+
```

Key Portfolio Takeaways

1. **Acquisition Surge & Trajectory**: Active users grew from 33 (Aug 15) to 146 (Aug 21), representing a **+342.4% expansion** over 7 days. Growth is predominantly driven by viral organic acquisition in South Korea.
2. **Engagement & Cohort Stickiness**: The overall portfolio engagement rate is high at **84.95%**, with returning users demonstrating deeply engaged behavior (**1,120.8 seconds / ~18.7 minutes** average session duration).
3. **Rollout Warning**: Staged rollout build **v1.3.08** exhibits an engagement rate regression (**53.8% vs. 86.8%** in v1.3.07 baseline).
4. **Analytics Telemetry Overheating**: High event-per-user volume in UI slider interactions (`player_pitch_changed` at 570.6 events/user) indicates missing UI debouncing, artificially inflating event volumes and GA4 property costs.

2. Detailed Application Deep-Dive: Neural Sound iOS

Property ID: `533563138` | **Platform:** iOS | **Primary Market:** South Korea

A. App Health Score: 8.2 / 10

```
HEALTH SCORE BREAKDOWN [■■■■■■■■■■■■■■■■■■■■] 8.2 / 10 • User Retention & Engagement : 9.5 / 10 (Strong
session duration & high ER) • Crash & Stability Health : 9.2 / 10 (99.45% overall, 100% on core builds) • Release
Engineering Quality : 5.5 / 10 (Staged build v1.3.08 engagement drop) • Telemetry & Analytics Cleanliness : 4.0 /
10 (Severe slider event spam)
```

B. Old vs. New User Cohort Deep-Dive

New users constitute **73.3% of active users**, indicating strong top-of-funnel acquisition momentum. However, returning users demonstrate **3.2x higher session duration**, indicating strong core product utility once past onboarding.

User Cohort	Active Users	Sessions	Avg Session Duration (s)	Engagement Rate	Screen/Page Views	Views / Session
New Users	114	112	347.8s (5.8m)	94.6%	229	2.04
Returning Users	44	69	1,120.8s (18.7m)	73.9%	140	2.03
(not set)	0	5	6.5s	20.0%	1	0.20
Total / Avg	**146**	**186**	**625.4s (10.4m)**	**84.9%**	**370**	**1.99**

Cohort Strategic Analysis

- **New User Conversion**: New users exhibit a **94.6% engagement rate**, meaning onboarding screens and initial play flows hold immediate attention.
- **Returning User Retention Mechanics**: Returning users log an average of **18.7 minutes per session**, indicating that power users rely heavily on audio stem separation and player manipulation tools.
- **Unclassified Traffic (`not set`)**: 5 background/ghost sessions logged with negligible session duration (6.5s). These are attributed to background app refreshes or terminated launch sequences.

C. 7-Day Velocity & Trajectory

Date	Active Users	New Users	Returning Users (Est.)	Sessions	Engagement Rate	WoW Trajectory
2026-08-15	33	4	29	57	78.9%	Baseline
2026-08-16	30	7	23	47	80.9%	-9.1% AU
2026-08-17	37	14	23	48	81.2%	+23.3% AU
2026-08-18	59	37	22	78	83.3%	+59.5% AU
2026-08-19	102	84	18	137	86.9%	+72.9% AU
2026-08-20	94	65	29	116	81.9%	-7.8% AU
2026-08-21	146	107	39	186	84.9%	+55.3% AU

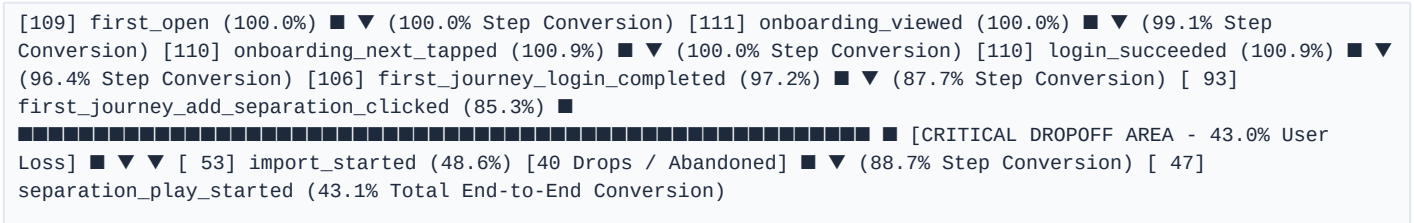

Trajectory Commentary

The application experienced an inflection point starting **August 18**, transitioning from a low-volume baseline (~33 AU/day) into a growth phase peaking at **146 AU/day** on August 21. Growth is driven almost entirely by new user acquisition (New Users jumped from 4 on Aug 15 to 107 on Aug 21).

D. User Funnel Diagrams

Funnel 1: Onboarding & First Journey Execution

- **Funnel Drop-Off Analysis**:
- **Onboarding to Login Completion**: Extremely high retention (97.2% reach `first_journey_login_completed`). Social authentication and onboarding UX perform well.
- **Add Separation -> Import Started Friction**: Drop-off occurs when users transition from tapping `add_separation` (93 users) to `import_started` (53 users). **43% of users abandon the flow at the system file picker/photo library permission prompt stage.**

Funnel 2: Core Feature Execution (Audio Stem Separation Flow)

```
[165] separation_page_viewed (100.0%) ■ ▼ (63.6% Step Conversion) [105] plus_button_tap (63.6%) ■ ▼ (96.2% Step Conversion) [101] plus_separation_tapped (61.2%) ■ ■■■
```

```
+-----------------------------+-------------+-------------+-----------------------+
```

Diagnostic Assessment

- **Continuous Slider Firing**: Events `player_pitch_changed` (570.6/user) and `player_tempo_changed` (227.3/user) fire continuously on every drag increment of native `UISlider` / `Slider` views.
- **Cost & Performance Impact**: **7,884 events (64.5% of total dataset event volume)** were generated by just 10 users interacting with playback controls. This inflates network transport overhead and analytics processing costs.

Swift/Combine Debouncing Fix

```
// REFACTORED OBSERVED OBJECT WITH COMBINE DEBOUNCING import Combine import SwiftUI final class
PlayerControlViewModel: ObservableObject { @Published var pitchValue: Float = 0.0 private var cancellables =
Set<AnyCancellable>() init() { $pitchValue .dropFirst() .debounce(for: .milliseconds(500), scheduler:
RunLoop.main) .removeDuplicates() .sink { finalPitch in AnalyticsManager.logEvent("player_pitch_changed",
parameters: [ "final_pitch_value": finalPitch ]) } .store(in: &cancellables) } }
```

H. Geographic Distribution

```
+-------------------------------------------------------------------------------+ | GEOGRAPHIC DISTRIBUTION |
+----------------------+--------------------+------------------+-----------------+ | Country | Active Users |
Sessions | User Share % | +----------------------+--------------------+------------------+-----------------+ |
South Korea | 110 | 126 | 75.34% | | Bangladesh | 8 | 30 | 5.48% | | Iran | 7 | 9 | 4.79% | | India | 4 | 2 |
2.74% | | Japan | 3 | 3 | 2.05% | | United States | 3 | 2 | 2.05% | | Canada | 2 | 3 | 1.37% | | France | 2 | 3 |
1.37% | | Oman | 1 | 1 | 0.68% | | Philippines | 1 | 1 | 0.68% |
+----------------------+--------------------+------------------+-----------------+
```

Regional Insights

- **South Korea Concentration**: Represents **75.3% of the active user base** and **67.7% of total sessions**. Store Listing Localization (KOSL), Korean customer support, and local audio creator marketing are key drivers.
- **Secondary Market Potential**: **Japan** and the **United States** exhibit low user counts relative to potential TAM, indicating opportunities for targeted local acquisition campaigns.

I. Prioritized Strategic Action Matrix

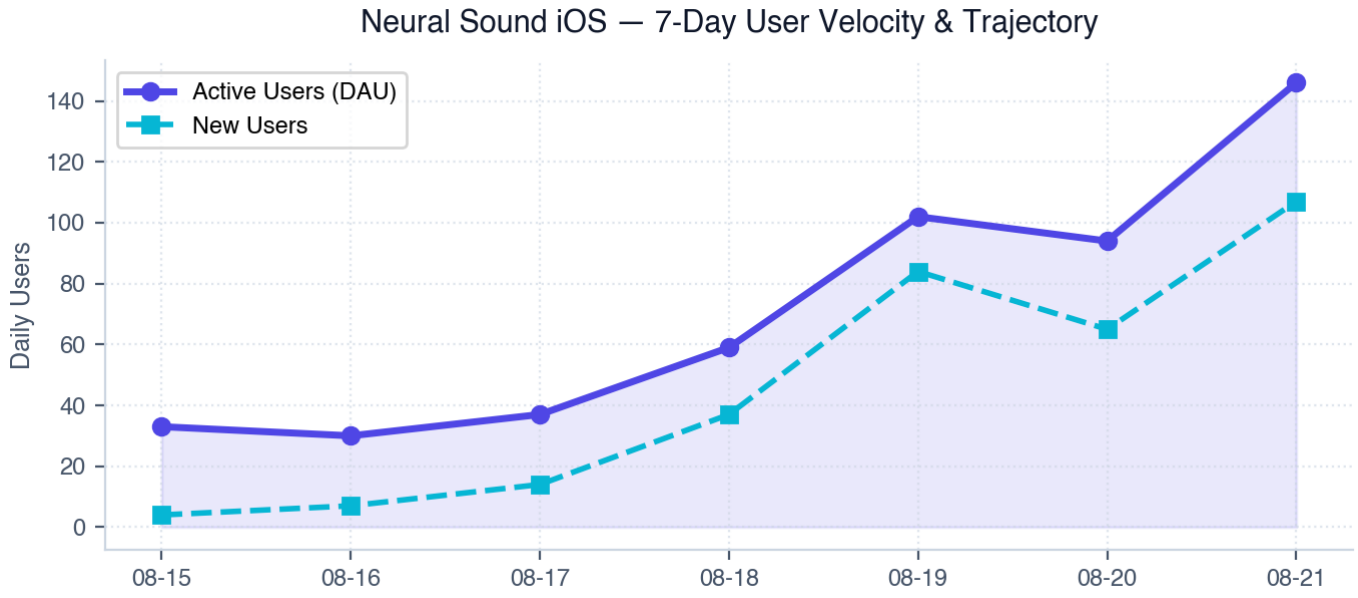

```
+-------------------------------------------------------------------------------------------------------------------------+
| PRIORITIZED STRATEGIC ACTION MATRIX |
+----------+-----------------------------------+-----------------------------------+-----------------------------------+
| Priority | Engineering Fixes | Product Optimizations | Growth & Telemetry Actions |
+----------+-----------------------------------+-----------------------------------+-----------------------------------+
| P0 | • Pause v1.3.08 staged rollout. | • Audit v1.3.08 audio player view | • Implement event debouncing on | |
(24-48h) | • Implement forced update rule | for non-crashing UI freezes/blanks.| pitch, tempo, and balance | | |
blocking legacy version 1.0.01. | | sliders (500ms threshold). |
+----------+-----------------------------------+-----------------------------------+-----------------------------------+
| P1 | • Refactor import bridge to support| • Redesign import selection view | • Add custom event tracking for | |
(7 Days) | direct system share extensions. | to reduce the 43% drop-off | import failure modes (e.g., | | | •
Optimize audio processing for | between selection and import. | unsupported codec/file size). | | | faster stem
separation startup. | | |
+----------+-----------------------------------+-----------------------------------+-----------------------------------+
| P2 | • Optimize background thread | • Implement local Korean App Store | • Target US and Japan markets | | (30
Days)| audio rendering memory footprint.| keyword optimization (ASO). | with localized social acquisition| | | | •
Add sample audio files to | campaigns. | | | onboarding for instant trial. | |
+----------+-----------------------------------+-----------------------------------+-----------------------------------+
