Executive Mobile Analytics & Growth Architecture Report

To: Executive Leadership & Mobile Growth Steering Committee
From: Principal Mobile Analytics & Growth Architect
Date: August 22, 2026
Scope: Portfolio Daily Performance, Cohort Trajectory & Release Diagnostics

---

1. Portfolio Executive Summary & Health Dashboard

The portfolio is experiencing an inflection point driven by viral growth and acquisition campaigns for **Neural Sound iOS**. Over the past 7 days, overall active users expanded by **+342.4%** (33 AU to 146 AU), with daily engagement rates consistently exceeding top-tier industry benchmarks (~85%).

However, this growth surge exposes underlying operational risks: **telemetry event inflation** caused by un-debounced UI sliders, **aggressive rate prompt timing**, and a **severe engagement regression in the newly rolled-out build (v1.3.08)**.

Portfolio Overview Dashboard

Metric	Yesterday Value	7-Day Trend Baseline	Growth / Variance	Status / Health Signal
Total Active Users (AU)	**146**	33 (Aug 15)	**+342.4%**	■ Explosive Acquisition
New Users (NU)	**107**	4 (Aug 15)	**+2,575.0%**	■ Hyper-Growth Spike
Portfolio Sessions	**186**	57 (Aug 15)	**+226.3%**	■ High Demand
Avg. Engagement Rate	**84.9%**	78.9% (Aug 15)	**+6.0 pts**	■ Outperforming Benchmark
Avg. Session Duration	**10m 25s** (625s)	N/A	High	■ Deep Engagement
Crash-Free User Rate	**99.45%**	Target: >99.5%	**-0.05 pts**	■ Action Needed (v1.0.01)
Staged Build Status	**v1.3.08**	Target: ER >85%	**53.8% ER**	■ **CRITICAL REGRESSION**

---

2. Deep-Dive Analysis: Neural Sound iOS

GA4 Property ID: `533563138` | **Primary Tech Stack:** Swift / AVFoundation / CoreML

App Health Score: 7.8 / 10

- **Retention & Engagement (+3.5/4.0):** Stellar avg. session duration (10m+ overall, 18m+ for returning users) and ~85% engagement rate.
- **Stability & Reliability (+2.3/2.5):** Mainline build (v1.3.07) achieved 100% crash-free rate, though legacy build v1.0.01 drags portfolio average down to 99.45%.
- **Release Management & QA (+0.8/2.0): Critical failure** on build 1.3.08 staged rollout—engagement dropped by **33.0 percentage points**.
- **Data Hygiene & Telemetry (+1.2/1.5):** Severe un-debounced event logging on UI sliders (`player_pitch_changed`, `player_tempo_changed`) clogging analytics pipelines.

Old vs. New User Cohort Deep-Dive

New acquisition accounts for **73.3%** of daily active users, driven primarily by localized acquisition in South Korea. Returning users demonstrate extreme stickiness, averaging over 18 minutes per session.

Cohort Type	Active Users	Sessions	Sessions / User	Avg. Session Duration	Engagement Rate	Screen Views	Screen Views / Session
New Users	114	112	0.98	347.8s (5m 47s)	**94.6%**	229	2.04
Returning Users	44	69	1.57	**1,120.8s (18m 40s)**	73.9%	140	2.03
(not set)	0	5	N/A	6.5s	20.0%	1	0.20

Architectural Key Takeaways:

1. **New User Activation Rate (94.6%):** The initial onboarding experience is frictionless. Users immediately jump into audio separation features.
2. **Returning User Depth (18m 40s Session Duration):** Returning users are utilizing Neural Sound as a core workflow tool (e.g., practicing over separated instrument stems or pitching/shifting tracks).
3. **Ghost Session Anomaly (`not set`):** 5 sessions logged zero active users with a 6.5s duration. This indicates background app refreshes or push notifications firing APNs sessions without foreground attribution.

7-Day Velocity & Trajectory

```
Active Users (Aug 15 - Aug 21) 160 ███████████████████████████████████████████████████████████ █
146 120 ██████████████████████████████████████████████ █ 102 █████ █ 94 80
███████████████████████████████ █ 59 40 ██ █ 33 ████ █ 30 ████ █ 37 0 ███ Aug 15 ███ Aug 16 ███ Aug
17 ███ Aug 18 ███ Aug 19 ███ Aug 20 ███ Aug 21
```

Date	Active Users	New Users	Returning Users (Est.)	Sessions	Engagement Rate	Trajectory Phase
2026-08-15	33	4	29	57	78.9%	Baseline Stability
2026-08-16	30	7	23	47	80.9%	Baseline Stability
2026-08-17	37	14	23	48	81.2%	Early Growth Signal
2026-08-18	59	37	22	78	83.3%	Campaign Breakout
2026-08-19	102	84	18	137	86.9%	Viral Peak #1
2026-08-20	94	65	29	116	81.9%	Mid-Week Consolidation
2026-08-21	**146**	**107**	**39**	**186**	**84.9%**	**All-Time High (ATH)**

Growth Trajectory Narrative:

The app experienced a **structural break on August 18th**, moving from a maintenance run-rate of ~33 AU/day to 146 AU/day. New User ratio surged from **12.1%** on Aug 15 to **73.3%** on Aug 21.

User Funnel Diagrams

1. Onboarding & First-Run Experience Funnel

```
[First Open] 109 Users (100.0%) ■ ▼ (-0% drop / cached view) [Onboarding Viewed] 111 Users (101.8%) ■ ▼ (-0% drop
/ re-entry) [Login Screen Viewed] 117 Users (107.3%) ■ ▼ (Conversion: 94.0%) [Login Succeeded] 110 Users (100.9%)
■ ▼ (Conversion: 96.4%) [First Journey Login Complete] 106 Users (97.2%) ■ ▼ (Conversion: 87.7%) [First Journey
Add Separation] 93 Users (85.3%) ■ ■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■ ▼ (Files App Path:
83.9%) ▼ (Photos Path: 63.4%) [Import Files Tapped] 78 Users [Import Photos Tapped] 59 Users ■ ■
■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■ ▼ [Separation Play Started] 47 Users (43.1% Overall
Conversion)
```

Funnel Bottleneck Analysis:
* **Onboarding -> Login:** Exceptional completion rate (**94%+**). Seamless auth integration (likely Apple Sign-In / Passkeys).
* **Intent to Execution Drop-off (CRITICAL):** While **93 users** tap "Add Separation" during their first journey, only **47 users** execute `separation_play_started`.
* **Drop-off Point: 49.5% drop** between clicking "Add Separation" and starting audio playback. This indicates processing latencies, CoreML separation model failures, or UX friction during local file picking.

Crash & Stability Health

Metric	Overall Value	Production Target	Status
Crash-Free Users Rate	**99.45%**	99.50%	■ SLA Breach (-0.05%)
Total Non-Fatal Exceptions	Minimal reported	< 1 per 100 sess	■ Stable

Stability Breakdown by App Version:

- **v1.3.07 (Production Baseline):** `100.0%` Crash-Free Users (136 AU) — **Flawless**.
- **v1.3.08 (Staged Rollout):** `100.0%` Crash-Free Users (5 AU) — **Flawless Stability**.
- **v1.3.06 (Previous Build):** `100.0%` Crash-Free Users (2 AU) — **Flawless**.
- **v1.0.01 (Legacy Build):** `66.67%` Crash-Free Users (3 AU) — ■ **CRITICAL DRAG**.
- *Root Cause Analysis:* 1 out of 3 users on legacy version v1.0.01 experienced a crash. This single failure pulled the entire application's crash-free SLA down from **100% to 99.45%**.

■ New Build / Staged Rollout Alert Section

A staged rollout for **Build 1.3.08** is currently active (5 users, 13 sessions). A comparative analysis against the Production Baseline (**Build 1.3.07**) reveals a severe engagement regression.

```
Engagement Rate Comparison: Build 1.3.07 vs Build 1.3.08 100%
■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■ 80% ■■■■■■■■■ ■ 86.8% (v1.3.07 Baseline)
60% ■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■ ■ 53.8% (v1.3.08 Staged) 40%
■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■
```

Metric	Baseline Build (v1.3.07)	Staged Build (v1.3.08)	Absolute Variance	Relative Variance	Signal
Active Users	136	5	-131	-96.3%	Rollout Phase
Sessions / User	1.12	**2.60**	+1.48	+132.1%	Session Fragmentation
Engagement Rate	**86.8%**	**53.8%**	**-33.0 pts**	**-38.0%**	■ **Severe Regression**
Crash-Free Rate	100.0%	100.0%	0.0 pts	0.0%	Stable

Staged Rollout Diagnostic Summary:

1. **Engagement Collapse:** Engagement rate crashed from **86.8% down to 53.8%**. Over 46% of sessions on v1.3.08 are bouncing.

2. **Session Fragmentation:** Sessions per user spiked from **1.12 to 2.60**. Users are opening the app, experiencing immediate failure or UI freeze, closing it, and reopening it multiple times.
3. **Architectural Recommendation: HALT STAGED ROLLOUT IMMEDIATELY (PAUSE v1.3.08 IN APP STORE CONNECT).** Inspect change logs between `v1.3.07` and `v1.3.08` for audio engine thread deadlocks or broken screen initialization.

Top In-App Events & Feature Telemetry Diagnostics

```
Top Audio Engine & Telemetry Events Volume player_pitch_changed ■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■
5,706 player_tempo_changed ■■■■■■■■■■■■■■■■■■ 2,046 audio_sessions ■■■■■■ 1,265 user_engagement ■■■■■ 1,187
separation_play_start ■■ 571
```

Event Name	Total Event Count	Unique Users	Events / User	Diagnostics & Integrity Assessment
`player_pitch_changed`	**5,706**	10	**570.6**	■ **TELEMETRY BUG:** Continuous UI slider logging without debouncing.
`player_tempo_changed`	**2,046**	9	**227.3**	■ **TELEMETRY BUG:** Continuous UI slider logging without debouncing.
`audio_sessions`	1,265	75	17.3	■ Healthy session playback heartbeat.
`user_engagement`	1,187	146	8.1	■ Standard GA4 engagement tracking.
`separation_play_started`	571	47	12.2	■ Core audio separation feature loop.
`player_stem_balance`	132	1	**132.0**	■■ Un-debounced slider event logged by single power user.
`rate_prompt_shown`	**123**	**122**	**1.0**	■ **UX REGRESSION:** Prompt shown to **83.5% of total active users** in a single day!

Telemetry & UX Architecture Defects:

1. **Un-Debounced Sliders (`player_pitch_changed` & `player_tempo_changed`):**
2. *Issue:* 10 users generated **7,752 events**. Sliders are firing network events on every frame pixel change during drag.
3. *Impact:* Artificially inflates Firebase billable event counts, consumes user bandwidth, and throttles network threads.
4. *Fix:* Implement a `Combine` / `RxSwift` `.debounce(for: .milliseconds(500), scheduler: RunLoop.main)` operator on all pitch and tempo sliders.
5. **Aggressive In-App Rate Prompt Fatigue (`rate_prompt_shown`):**
6. *Issue:* **122 out of 146 active users (83.5%)** received an app store review prompt yesterday.
7. *Impact:* Prompts are firing immediately upon launch or during onboarding before value realization, leading to negative reviews or prompt exhaustion.
8. *Fix:* Restrict `SKStoreReviewController` invocation to trigger only after a user completes at least **3 successful stem separations**.

Geographic Distribution

South Korea accounts for **75.3% of the active user base**, indicating a viral localized loop (e.g., K-Pop backing track isolation or vocal practice).

```
Geographic User Share South Korea ████████████████████████████████████████████ 75.3% (110 AU)
Bangladesh ███ 5.5% (8 AU) Iran ██ 4.8% (7 AU) India █ 2.7% (4 AU) Japan / US █ 2.1% ea (3 AU)
```

Country	Active Users	Sessions	Sessions / User	Share of Total AU	Growth Vector Strategy
South Korea	**110**	**126**	1.15	**75.3%**	**Core Market:** Double down on Korean App Store Optimization (ASO).
Bangladesh	8	30	**3.75**	5.5%	High engagement intensity; evaluate local audio asset needs.
Iran	7	9	1.29	4.8%	Monitor network latency and offline ML processing capabilities.
India	4	2	0.50	2.7%	High bounce rate; optimize for low-tier device ML execution.
Japan	3	3	1.00	2.1%	Expansion target; high ARPU potential for audio apps.
United States	3	2	0.67	2.1%	Key tier-1 target; needs localized organic marketing.

---

3. Prioritized Strategic Action Matrix

Priority	Track	Focus Area	Detailed Action Plan	Target KPI / Success Criteria	Owner
P0	**Engineering**	**Halt v1.3.08 Rollout**	Immediately pause v1.3.08 staged rollout in App Store Connect. Audit diffs against v1.3.07 to debug the -33% engagement crash.	Engagement Rate restored to >85% on next release.	Lead iOS Engineer
P0	**Engineering**	**Slider Telemetry Debouncing**	Apply 500ms debouncing logic to `player_pitch_changed`, `player_tempo_changed`, and `player_stem_balance`.	Telemetry event volume reduced by ~90% per session.	Mobile Data Architect

P1	**Product / Growth**	**Rate Prompt Logic Overhaul**	Remove global launch rate prompts. Implement gated rule: `audio_separations_completed >= 3` before triggering `SKStoreReviewController`.	App Store rating >4.8; prompt trigger rate capped at <15% daily AU.	Product Manager
P1	**Engineering**	**CoreML Processing Friction**	Investigate 49.5% drop-off between `first_journey_add_separation_clicked` (93) and `separation_play_started` (47). Add processing telemetry timers.	Conversion rate from add -> play increased from 50.5% to >75%.	ML / Audio Engineer
P2	**Engineering**	**Legacy Force Update**	Implement soft/hard force-update prompt for legacy versions (`v1.0.01`) to eliminate stability drag.	Portfolio Crash-Free User Rate boosted to >99.8%.	Lead iOS Engineer
P2	**Growth**	**Korean Market ASO Localization**	Translate App Store metadata, keywords, and screenshots into Korean; leverage local viral music trends.	D30 retention in KR market improved by +15%.	Head of Growth
